From: harshvardhan_k
Topic: 2525 Message: 2525

Hello All,

This refers to the recent emails flying back and forth.

A diplomat... is a person who can tell you to go to hell
in such a way that you actually look forward to the trip.

A diplomat must always think twice before he says nothing.

A diplomat is a man who says you have an open mind, instead
of telling you that you have a hole in the head.

A diplomat is a man who always remembers a woman's birthday
but never remembers her age.

Have a great time folks.
Best wishes,

Harsh Vardhan

2527. Discovery scheduled to lift-off at 14.39GMT tomorrow

Yahoo group: m_a_r_s

Weather threatens to delay shuttle launch
by Paul Platt, Times Online

The repeat of a fuel gauge malfunction will not stop tomorrow's launch of the space shuttle Discovery, but there is a 40 per cent chance that poor weather will, Nasa has said.

The failure of one of four hydrogen level sensors was behind the last-minute cancellation of the July 13 launch, which was to be the first space shuttle flight since the 2003 Columbia disaster.

Nasa has run more than 160 tests, but cannot explain what caused the sensor to fail. It hopes to spot the root of the problem during last-minute testing while the shuttle's massive external tank is being filled.

The space agency plans to continue the launch even if the problem recurs on the same sensor, or another similar one, as long as engineers are satisfied they have a clear understanding of the problem, Wayne Hale, deputy manager of the space shuttle progamme, said.

But he added that if any other low fuel level sensors malfunctioned, the launch would be called off. The sensors send data on the levels of hydrogen in the tank to determine when the three engines should be shut off during the ascent into orbit.

If the sensors fail the orbiter's engines could shut down prematurely during the shuttle's ascent.

Even if there are no issues with the sensors, weather forecasters gave a 40 per cent chance that cloud cover or rain could stop tomorrow's planned launch, as NASA wants a clear view of the shuttle as it ascends into orbit.

Kathy Winters, Nasa weather officer, said: "We do have some concern for launch."

The launch would also be cancelled if there is thunderstorm activity within 20 nautical miles of the Kennedy Space Centre launch pad, near Cape Canaveral, Florida, since it could affect an emergency landing.

There were also worries about the weather in alternate emergency landing sites in France and Spain.

Discovery, formally known as STS-114, is scheduled to lift-off at 14.39GMT tomorrow, taking seven crew members, including a Japanese national, to a rendezvous with the International Space Station (ISS).

Should the launch be called off, Nasa will have until the end of the month to send Discovery into orbit so it can hook up with the ISS. Otherwise it will have to wait until September for the next window for a daytime launch.

Nasa's decision not to launch at night is among new safety adopted after Columbia burst into flames upon re-entering the Earth's atmosphere on February 1, 2003, killing all seven astronauts.

The tragedy was blamed on a small piece of insulation that broke off just after lift-off and hit the orbiter's left wing, causing a crack that allowed superheated gases to penetrate the structure just minutes before the planned landing.

As an added safeguard Nasa has installed more than 100 cameras on the ground and aboard two airplanes to capture the shuttle's first two minutes of ascent.

If anything goes wrong in the first few minutes, the shuttle could return to the Kennedy Space Centre, or cross the Atlantic to land at a base in France or Spain

The mission includes three planned spacewalks to test repair techniques and the spacecraft will also deliver vital supplies and equipment to the ISS.

Space station crew will photograph Discovery's underside and if the images show the shuttle suffered significant damage during ascent, the seven astronauts will wait for another shuttle to bring them back to Earth from the ISS.

2529. Unused Collins mechanical filter for sale

Yahoo group: m_a_r_s
Date: 2005-07-26 07:57:43 UTC
From: dinesh patel
Topic: 2529 Message: 2529

Dear MARS Members

I have a collinns mechanical filter in very good condition as detailed below for sale.

SYMMETRICAL BANDPASS FILTERS:

Fc Type Part Number Nom. B.W. Max. B.W. Case Style
250 F250F-100 526-9410-00 10.0 @ 6 dB 20.0 (@40dB) F

Fc..... Center Frequency (kHz)
Type..... Collins filter model
Part Number..... Collins part number
Nom. B.W. ..... Nominal Bandwidth (kHz)
Max. B.W. ..... Maximum Bandwidth (kHz @ 60 dB)
Case Style ..... Type of case

Explanation of case style

E - Bathtub style, 2 13/16 long x 15/16 wide x 1 high. Two guide pins, four contact pins (mates with socket). Guide pins 1.531 apart, contact pin pairs 2.375 apart, each pair of pins separated by 0.486.

F - Bathtub style, same dimensions as E type, but threaded studs and solder lugs instead of guide pins and contact pins.

Anyone interested may mail me at radiopatel @ hotmail.com

I can deliver free of cost any where in mumbai. out side mumbai through courier or post as per choice of buyer at his cost.

Subject: [VUHams] Shuttle Discovery launches successfully (Jul 26, 2005)

Shuttle Discovery launches successfully (Jul 26, 2005) -- NASA's space shuttle fleet is no longer grounded. The Discovery orbiter took off from Cape Canaveral, Florida, right on schedule today on the Return to Flight mission (<http://www.nasa.gov/returntoflight> STS-114). The Discovery flight is the first for a NASA shuttle since the Columbia disaster on February 1, 2003, that killed seven astronauts. Discovery's seven-person crew includes six Amateur Radio licensees. The <http://web.usna.navy.mil/~bruninga/pcsat2.html> PCSat2 Amateur Radio payload also is aboard. US Astronaut Eileen Collins, KD5EDS, is the commander for mission. The international crew also includes James Kelly, KC5ZSW; Charlie Camarda, KC5ZSY; Wendy Lawrence, KC5KII; Soichi Noguchi, KD5TVP; Andy Thomas, KD5CHF/VK5MIR, and Stephen Robinson. Thomas and Lawrence both did tours of duty aboard the Russian Mir space station and conducted many SAREX (Space Amateur Radio EXperiment) school group contacts. Discovery is undertaking a 12-day flight to deliver equipment and supplies to the International Space Station, although Amateur Radio operation by the licensed shuttle crew members from the space station's NA1SS is considered unlikely. PCSat2 will be installed outside the ISS during a spacewalk. Even in the hours before launch, NASA managers and engineers had been weighing the risks involved of launching Discovery in the wake of problems with a fuel-tank sensor that prompted shuttle managers to scrub the first Discovery launch attempt July 13. For the <http://www.nasa.gov/returntoflight> latest information on the Space Shuttle's Return to Flight, visit the NASA Web site.

Sent: Friday, July 29, 2005 12:39 PM
Subject: [VUHams] World Ham Population Ratios Pop Out

On a recent visit by my father in law, F0EFQ, we got to discussing the declining ham population in France. When I compared a ratio of hams to the number of people in his country, it came up to be 2,495 people for every one ham radio operator.

In the U.S.A., that ratio was a lot better at 434:1. What a huge difference. But this U.S.A. number was not close to that of Japan's at 94:1.

Math here is (127,333,000pop/1,350,120hams) That is an amazing number. Putting it into football perspective, if your team were playing a home game with 80,000 fans, you would have over 850 JA operators with only 184 U.S.A. operators in attendance.

Would we even have contests if it were not for the JARL? Who would we work for points? However, it gets even more interesting from here.

Germany has a ratio of 1,044:1 while the U.K. is lower at 954:1. That was a surprise for me but the German ham population is growing well according to Internet research. When I researched my old contest logs, I found DL calls more common than the G's. (Brain jam.)

Spain is at 662:1 while Italy is almost three times this at 1,889:1. When I lived in Wyoming working pile-ups, I thought everyone on the radio was from Italy and I never heard an EA. Hum....

Brazil is 5,744:1 while Argentina is at 1,140:1. I love these operators on 10 meters when band conditions are dead in a contest and all you have is the America's to work. These ratios are great considering you have populations of 184,101,000 and 37,214,800 respectively.

Our neighbor to the north, Canada, had a ratio of 696:1 while Australia was at 825:1. I thought that they would be somewhat closer to that of the United States but they were not too far off.

Two big numbers really stood out in digging these numbers up on the Internet. Russia was at 3783:1. I thought the ratio number would be a lot higher due to the developments in the country over the last several years. But Russia is a lot smaller than I thought at only 143,782,300 people. The approximately 38,000 hams are very devoted from my experiences. How many zones do they still cover? -- And with so few hams? I can only see their ratio going down over time.

The last country in my research made me think. I would have to shake hands with over 72,000 people before I had a chance to meet one ham. And this country has around 15,000 operators at their best guess. But with a population of 1,080,264,300, India is a good zone area and

country to work on for your 5BWAZ and 5BDXCC.

My statistics were gathered by sites found on Google and attempts were made to find the most recent population census and ham license information provided by third party resources.

One other tidbit, I tried to avoid countries that only reported licensed stations versus the number of licensed hams. Many hams operate from club stations in many countries and are not always counted in accurate numbers. Interesting eh?

For links to a good ham population site, go to: http://www.qsl.net/vu2msy/HAMPOP.htm

To sum things up, I believe we need to look at ratios as much as we do the numbers. For example, if someone told you that France had 23,698 hams, you might think that was fine. But compare the U.S.A. ratio to that of France (434:1 versus 2,495:1) and you see France, being a modern industrial country, might have a situation.

Other countries, with high ratios show excellent potential for growth such as Brazil and continued growth in DL.

Using ratio comparisons can be a viable means for modern countries to measure their ham population's health. -- It can also be used by any country to track the growth of its ham population.

Hi all,
First of all thanks to Ankur and gang for being vigilant on the band. Well done!!
Now to the problem. Please do talk to WPC and ONGC!!A letter dashed off to both the parties is most urgent!!!Please file a police complaint if it is the course to be followed. Please make a lot of hungama!!
I think hungama should work. If all sane courses fail, then the press should be involved.
Guys and gals, we have to fight this. Can one responsible call sign holder please spearhead this? If letters from other clubs are required, to add muscle, I will help.
Lets get to work!!!
Sarla

From: ULHAS
Topic: 2540 Message: 2543

I don't want strangers barging in on our allotted frequencies ongc or whoever. So let us fight.I have started blocking them whenever I find them. In fact, I was aware of this for the last month or so. But as I was qrl for morning qth, I did not create a qrm. So let 's become proactive. Block them whenever they are there.

are all ok??
listen those people are not responsible for this qrm... and they might not have sufficient knowledge to change bands either...
and blocking them would be like fighting helpless people...

you have to contact ongc and get hold of their icom dealers
and ask them to reprogram their sents to some other band...

quite simple considering that that involves no government interference...

how can u call urselves ham if u fight against helpless operators??

Hello Anurag,
Maybe what you say about ongc not having sufficient knowledge is true. But unfortunately they are transgressing and need to leave the ham bands alone. Yes ongc needs to be educated about this , but they need to sort it out with their icom man and not we hams. Our job is to protect our frequencies. And we are not here to fight anybody!!!And ongc is definitely not helpless. Lets not get emotional over this!!!!
So basically this is how it works. We make it difficult for them to work on the band, they get back to their icom person and he will sort out the mess!! We had private telephone exchange operators(illegal) on vhf last year. A few hams like jpn and hit had to personally threaten them!!Beleive me, the authorities turned a blind eye.
This is just for your info.

Dear Ankur,

All though I have not heard the QRM on 145.00 by ONGC, as I am in Pune and therefore I cannot comment on the signal..

But you must consider the possibility of this signal being a HARMONIC... splattering on our band... it may sound very very real signal on our band, but it past we have confirmed that some of these signals are a matter of fact a Harmonic signals...

Please confirm before initating any action legally in the matter...

Ankur Puranik <ankurpuranik@...> wrote:

Dear Fellow Hams,

Of recent we have been hearing some QRM on 145.000 , Most of us know about it but no one know who is using this frequency.

I had just finished having my lunch and was just scanning the VHF when my handy locked on to 145.000 .. n heard some people having a QSO .... At first I thought it was an image frequency and so confirmed with my friend VU2 IIA (Mahesh) and he too heard the same on his RIG. (VU2IIA located near Gorai Monitoring station Mumbai & Myself located at colaba near Gateway of India)

Finaly the QSO on 145.000 continued for pretty long time.... and I was not able to figure out as to who was using the freq.... but did sound like some construction company. So i decided to break in the QSO.

I did break in the QSO and spoke to the person on AIR and was stunned to know that the frequency was being used by THE ONGC OIL RIG which is stationed between the Gateway of India and the Elephanta caves.

Upon asking him as to who has authorised them to use the frequency, He said the Icom people have given us this Walkie talkie and the base station and we have been operating on this frequency for past one month. We dont know rest, we are using what is given to us.

The person was kind enough to give me his name as.. Mr Raghubeer.

I dont understand which Icom dealer has given these people the Rigs & the WT's and alloted them the HAM BAND frequency.

ITs high time we come together and take some strict action agains the Icom Agent who has given them the equipment and alloted the 145.000 Mhz freq. We need to inform the WPC about this.

I am aware that ONGC already has a good wireless network of their own on HF as well as on VHF. So what is ONGC DOING ON HAM BAND??

Today we have ONGC on 145.000 ....tomorrow we might have the fishermen comin up on 146.000 ....

Save our Band.

2560. PCSAT-2 update (Extracts from AMSAT-BB)

Yahoo group: m_a_r_s
Date: 2005-08-04 05:40:43 UTC
From: VU2UGO
Topic: 2560 Message: 2560

PCSAT-2 update
==========

STS-114 Mission Specialist Soichi Noguchi deployed PCSat2 on the ISS Wednesday at approximately 1030 UTC during the EVA3 spacewalk. The deployment of PCSat2 was televised live on NASA-TV and was called Materials International Space Station Experiment-5 (MISSE-5), a materials experiment used to study the degradation of solar cells in space. Captured images can be found on the PCSat2 Info page managed by David Johnson, G4DPZ:
http://www.pcsat2.info/PCSat2Web/index.do

The installation of PCSat2 was followed by another space first. Mission Specialist Steve Robinson was placed in a portable foot restraint at the end of the ISS robotic arm and maneuvered to the underside of Discovery to remove two gap fillers near the shuttle's nose. Robinson's repair mission was the first time NASA has ever tried to repair a shuttle in orbit.

NASA engineers are also working to determine if a damaged thermal blanket under one of the cockpit windows will also need repair. If so, they will have to schedule an additional EVA to effect a repair.

STS-114 was assigned the NORAD Satellite ID Number 28775. Keplerian elements are available at the NORAD Space Track website at:
http://www.space-track.org

Space Track has placed the STS-114 and ISS keps for STS-114 on the landing page. Those tracking Discovery will need to update their keps frequently.

Dr. T.S. Kelso is also providing elements through Celestrak at:
http://www.celestrak.com/NORAD/elements/sts.txt

NASA has posted trajectory data including predicted Keplerian elements for each orbital maneuver. These can be found at:
http://spaceflight.nasa.gov/realdata/elements/index.html

Submitted by: Emily Clarke - W0EEC

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

Installation images are now on http://www.pcsat2.info

I'll sort out the layout when I get time :-)

- Dave
G4DPZ

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

PCSAT2 EVA Safety switch was thrown at 1117z
so the 8.3 hour EVA Safety timer should time out
at about 1937z but first command station will be
KC8SRG in OHIO at about 1937z.

If we miss that, then N6CO gets two more tries
from the West Coast, then nothing until NZ
and London the next morning.

WHen activated, there will be 1200 and 9600 bd
telemetry on 437.975 +/- 9 KHz of Doppler.
Conventional 1200 baud APRS IGate stations
are encouraged to tune over to the downlink and
feed anything you capture.

9600 baud capable stations are encouraged to
capture the special 9600 baud downlink and
email to PC2@... and if they have
IGate software (or the latest ALOGGER 2.0.2)
to feed it live to satgate.aprsca.net port 20150.

Please, no one transmits. We will announce when
PCSAT2 is open for general use in a few weeks.

Thanks
Bob, WB4APR
USNA Satellite Lab

2561. POSAT (PO-28) update (Extracts from AMSAT-BB)

Yahoo group: m_a_r_s
Date: 2005-08-04 05:34:03 UTC
From: VU2UGO
Topic: 2561 Message: 2561

POSAT (PO-28) update
==========

AMSAT-UK secretary Jim Heck, G3WGM has announced that PoSAT-1 (PO-28) will be returned to the Amateur Satellite Service in the coming weeks. Mr. Heck indicated that "At present its undecided whether 9k6 or FM.", but promised to let AMSAT users know as soon as the decision is made.

PoSAT-1 was built by a consortium of Portugese universities and industry at the University of Surry in England. It's primary purpose was commercial, but after discussions with the consortium AMSAT-UK has negotiated switching it back to Amateur use. It is similar in construction to KO-23. The commercial side of PoSAT-1 is currently transmitting WOD on 429.950MHz.

PoSAT-1 was launched in September 1993 into a 822 x 800km (799 x 783km presently) sun-synchronous orbit inclined 98.6 degrees. Local time of the decending node (LTDN) over central North America occurs at ~1200 UTC. LTAN occurs ~2300 UTC.

More information may on PO-28 can be found in the AMSAT Satellite Summary at:
http://www.amsat.org/amsat-new/satellites/sat_summary/po28.php

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

Current Keps are:

POSAT1 22829U 93061G 05211.56612910 +.00000086 +00000-0 +49038-4 0 015132
22829 098.2400 207.2392 0010790 107.4407 252.7931 14.30056167617672

Submitted by: Emily Clarke
--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

Hi AMSAT-BBers,

as the long term satellite enthusiasts among you may remember
PO-28 was operating for some time on ham radio frequencies
before it was switched to "commercial mode" out of the ham
radio bands and is nowadays still active with quite strong
signals as PoSAT-1 on 429.950 MHz, 9600 bps FSK, PACSAT
broadcast protocol. (although it seems to me that the
aging TX which is in space now for more than 11 years
has drifted 2 kHz down to approx. 429.948 MHz)

Best 73,
Oscar, dj0my

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

A picture of PO-28 can be seen at:

http://www.southgatearc.org/news/jul2005/new_satellite.htm

73 Trevor M5AKA

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

Hi all

Please take note: the PO-28 correct downlink freqs are 435.250 and 435.275 MHz.
And, in case you haven't noticed yet, this sat have a 38k4 downlink and good cams on board :O)
See you on PO-28

F.Costa, CT1EAT
www.qsl.net/ct1eat

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

Hello Group,

This topic seems very interesting to me and I have been following it closely.

Although PO-28 is not yet opened for amateur use, I have tried to receive (only RX, no TX) some 9600 bps packets from it on 429.950 +/- today at 1200 UTC 03/08/2005 on a past over west Malaysia.

The results were better than I expected. About 5 seconds after AOS, the DCD led began to blink, and about 25 seconds later it grew steadily and data packets began to flow in. Data decoding was continuous until about 50 second before LOS when the DCD led began to blink again.

Here is a link to a screenshot of the received data by WISP.
http://www.9w2qc.net/po-28

Equipment used was IC-910H, 11 element 70 CM vertically polarized quad with SSB SP-7000 preamp and Symek TNC3S. Maximum elevation of this pass was about 35 degress, and maximum signal strengths shown on the S meter was around S9+30db.

Hope to work this bird soon once it has been assigned to the amateur satellite service.

73,
Sion Chow Q. C.,
9W2QC.

--*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*-*

Great to hear the news! -

Since it looks like PO-28 will be a 9.6K FSK bird, why does it have a 50KHz uplink B/W and 200KHz downlink? What will be the up/down freq relationship (not
counting doppler)?

tnx es 73

Bruce -W3NJ

Those are the frequencies of the FM uplinks and downlinks, not the edge of a passband. If you want to hear how loud this sat is, listen on 429.950 until they change it back to amatuer service.

73 Drew KO4MA

Sent: Tuesday, August 02, 2005 09:23 PM
Subject: Re: RIG-L NOAA 14 Ch2 APT on

It will need to be turned off as it is in VHF conflict with NOAA 17 in less than 48 hours. NOAA 14 is a back-up satellite and with VHF conflict on a weekly basis its almost 100% certain that its APT will stay off.

Regards
Ian.

Shantanu Chand <VU2SCQ@...> wrote:
Dear Nilesh,
While on the topic i would like to ask you for your advice. I tried calling you in Pune but i guess there was some problems with the communications there.
Anyways here goes. In the lst two or three days we guys here in mumbai have stepped up usage of 70cm. In fact, i conducted a small net last night with 10 check ins!!!
But, it seems someone is cross banding 70cms on to our repeater and therefore there is total QRM on all the related frequencies.
Also, I have noticed in the last few days, VU2AF's signal to the repeater is also being jammed. VU2AXN also told me that while I was condcting the net someone was jamming again.
Please can you advise what we should do or just plain ignore!
Thanks
VU2SCQ

All though I have not heard the QRM on 145.00 by ONGC, as I am in Pune and therefore I cannot comment on the signal..

But you must consider the possibility of this signal being a HARMONIC... splattering on our band... it may sound very very real signal on our band, but it past we have confirmed that some of these signals are a matter of fact a Harmonic signals...

Please confirm before initating any action legally in the matter...

Ankur Puranik <ankurpuranik@...> wrote:

Dear Fellow Hams,

Of recent we have been hearing some QRM on 145.000 , Most of us know about it but no one know who is using this frequency.

I had just finished having my lunch and was just scanning the VHF when my handy locked on to 145.000 .. n heard some people having a QSO .... At first I thought it was an image frequency and so confirmed with my friend VU2 IIA (Mahesh) and he too heard the same on his RIG. (VU2IIA located near Gorai Monitoring station Mumbai & Myself located at colaba near Gateway of India)

Finaly the QSO on 145.000 continued for pretty long time.... and I was not able to figure out as to who was using the freq.... but did sound like some construction company. So i decided to break in the QSO.

I did break in the QSO and spoke to the person on AIR and was stunned to know that the frequency was being used by THE ONGC OIL RIG which is stationed between the Gateway of India and the Elephanta caves.

Upon asking him as to who has authorised them to use the frequency, He said the Icom people have given us this Walkie talkie and the base station and we have been operating on this frequency for past one month. We dont know rest, we are using what is given to us.

The person was kind enough to give me his name as.. Mr Raghubeer.

I dont understand which Icom dealer has given these people the Rigs & the WT's and alloted them the HAM BAND frequency.

ITs high time we come together and take some strict action agains the Icom Agent who has given them the equipment and alloted the 145.000 Mhz freq. We need to inform the WPC about this.

I am aware that ONGC already has a good wireless network of their own on HF as well as on VHF. So what is ONGC DOING ON HAM BAND??

Today we have ONGC on 145.000 ....tomorrow we might have the fishermen comin up on 146.000 ....

Save our Band.

BlankHello NLF,

How are you? Hope you and family are safe and sound after the fury of Mother Nature that we faced last Sunday.

Its been long time since there is any communication regarding the Green Birds. I think last I heard was that Rahul, VU3WJM, would be changing the bands of the green bird from Military Band to Ham Band and the sets would be sent to him for this purpose.

Have we received those sets back from Rahul ??

Please do remember me while giving away those sets, as I am busy with my Morning QTH and hence could not attend Sunday Meetings, but would definitely love to checkin the NIGHT OWL's NET from my QTH after seeing such a good response (25 checkins as per Zyros).

73's for now.

Hi Ankur!!
after a long time i am posting a mail!! anyways great to hear that SCQ and u r planning the yearly event of Visarjan!!!! Well i am in for the event!!!
I think that will be a good start to mobilize mars activities!!!!
hoping to hear the plans positively from u!!

Ankur Puranik <ankurpuranik@...> wrote:

Dear Shantanu & dear friends,

Shantanu I was thinking about the same this morning.

Well " we " have done it for the past so many years and " we " will do it this year also.

This is the right time to start planning and get things moving slowly so that we dont have to run around till the last minute.

Lets start off my collecting data as to how many people want to participate in the event.

Lets distribute the work and lets start working on it.

Ham Radio support is very much required at visarjan sites b'coz we have helped slove so many lost and found cases, medical emergencies , control traffic at occasions and many other things.

The main role we Hams play is inter-linking the emergency services. All the emergency services have their own wireless network but none of them have the inter-connectivity amongst themselves which is very much essential in such events. This is what one of the TOP COPS Javed Ahmed Sir (IPS) had asked me last year.... "Ham Radio is not required here.. what are you people doing here?" n this is what I had replied to him.

He was convinced when he saw us help establish a quick link between the Cost Guard services & the Ambulance service when a medical emergency case of a man with heavily bleeding leg was got onto the shore from the sea and was to be rushed to the hospital immediatly.

So friends lets get together and do the Visarjan... we did it , we will do it now... n we will do it in future...

afterall HAM also stands for Help All Mankind.

Hi all,
I agree with SCQ and AXN that we need to keep ourselves associated with Visarjan. To that effect i feel we should meet up and chalk out a plan of action and hand responsibilities. Whereas no formal MARS meeting has been announced as yet for this month, it would be better if we atleast have an informal meet to decide upon the Visarjan event. Hope all would agree.

Dear Nilesh.

Regarding Green Bird, VU2AUA has no proper answer:

I want to know the following and asked Arun Singh but
he informed that only NLF can confirm:

1. Total no.of Green Birds booked by Mars
2. Total no.of sets recevied by Mars
3. Total no. of sets distributed.
4. Balance sets in stock.

5. No.of persons booked.

I have handed over to you full payment of Rs.4000/- to
you on behalf of VU2GIB Mukund Gubbi & VU2HBN Haridas.

Hope to hear from you.

Hi!

It is better if I give exact picture. Many Green Birds were repaired and modified by me during my last Mumbai visit. These sets were originaly purchased by MARS and had been reboxed. If I remember correctly about 5 sets could not be repaired as they needed major work. It was decided to send them over to Lucknow but they are still at Mumbai. So the initial purchased are all at Mumbai.

Here I have modified another 6 sets for MARS members. That I discussed sending thru transport. These are ready to operate. I was supposed to visit during Dec but unfortunately could not do so due to death in family.

I would be visiting Mumbai in abt a months time, I am willing to spare couple of days to do the needful to the sets lying with society for some time. Kindly distribute these sets among the members. I personaly am not aware as to who all have paid for the sets either during initial purchase from Agra or the owners of present modified 6 sets with me.

Request all having these sets to get them going during my forthcoming visit.

Dear Nilesh,

I completely agree with JPN. I had asked AUA a couple of times about this set. But, he said that he is unaware of any such sets given to him by you and that I also remember that he was asking people during the meetings prior to Hamfest about cheap VHF sets for Rs. 1500/-.

Please confirm with AUA in person regarding the sets. Also, as per Rahul's (WJM) mail, he has already repaired few sets.

Where are those sets ???
Have they already been distributed ???
If so, to whom ??? PLease mention their names.

If not, when can we have those sets???

AUA is not available on phone now as his Cell phone is out of order, and when left a message at his home, neither does he call back.

Please do something in this regards.

73's,

Parin / VU2PIC

Hi Nlf
Even I tried a lot to contact AUA from last one year, previously
he used to tell me that Rahul has already done few sets and you
shall get your set in few days, this was the talk in Jan 2005,then
he said that all the rigs are with NLF and he is not aware of what
is actually happening to this issue, but from last few weeks he is
not in touch neither he answers any message left at his home,
Even i am waiting for my green bird. Its almost more than a year
that i have paid for my greenbird.

Dear Nilesh,

I completely agree with JPN. I had asked AUA a couple of times about this set. But, he said that he is unaware of any such sets given to him by you and that I also remember that he was asking people during the meetings prior to Hamfest about cheap VHF sets for Rs. 1500/-.

Please confirm with AUA in person regarding the sets. Also, as per Rahul's (WJM) mail, he has already repaired few sets.

Where are those sets ???
Have they already been distributed ???
If so, to whom ??? PLease mention their names.

If not, when can we have those sets???

AUA is not available on phone now as his Cell phone is out of order, and when left a message at his home, neither does he call back.

Please do something in this regards.

73's,

Dear Nilesh.

Regarding Green Bird, VU2AUA has no proper answer:

I want to know the following and asked Arun Singh but
he informed that only NLF can confirm:

1. Total no.of Green Birds booked by Mars
2. Total no.of sets recevied by Mars
3. Total no. of sets distributed.
4. Balance sets in stock.

5. No.of persons booked.

I have handed over to you full payment of Rs.4000/- to
you on behalf of VU2GIB Mukund Gubbi & VU2HBN Haridas.

Hope to hear from you.

Hi NLF,

Just wanted to ask you about the money that we have paid for the Green Birds, i.e., Rs.2000/- per set (where, I have paid Rs.2000 for one set).

Is the money with you or MARS Treasury ???

This I am asking you because of the frozen response from Arun Singh (AUA) and hence felt worried since its been so long that we have given you the money hoping to receive the sets asap and get going on the 2m atleast.

Also, did you communicate with AUA regarding the Green Birds and his frozen response to our enquiries for the Green Birds???

When will we get the rigs that have been repaired by Rahul / WJM ??

Hi!

Presently I will try to send over the 6 sets as earliest will let all know when sent. Unfortunately ones at Mubai will have to be looked into there.

Apart for 5 sets at Mumbai most have been been modded for HAM bands and would require only minor tweeking. In fact we tested few of them after Mods on then functional repeater.

I tried calling up AUA but appers his mobile is not working.

Dear Parin

Koi Answer Nahi Dega. NLF & AUA kohi ye clear karna
hoga.

If you ask NLF he will guide to AUA, AUA ko Pucha to
NLF ke taraf batayega.

Do no Topi lagarahai.

Mars Committee any answer for this?

During distribution of licences NLF had compelled
SWL's to put up Antenna and many SWL's did it. Then
booked Green Bird. Ab Antenna Rust ho raha hai.

VU2GBI had made compelete set up except VHF set and
awaiting to be on Air - more than one year.

Green Bird to Udgaya, Ab use AGM'me hi pakadna padega.

NLF / AUA your answer awaited before that.

Fun With Decibels

By Vito Chiarappa (W6TH) on July 30, 2005

This is a simple idea to keep your gain figures in mind for the future; to determine what the gain figures can do to help you know what your ERP (Effective Radiating Power) can and will do for you.

Great for general use and use for QRPers.

Let us say the 2-element yagi will give a forward gain of 5 dB and you are running a power of just 5 watts output. Just check the 5 dB on the chart below and multiply by the multiplier 3.16 by 5 watts, which will be calculated as 15.8 watts ERP.

Now take a 1/4 wavelength vertical and you find you have a gain of 4 dB, just look at the 4 dB and use the multiplier of 2.51, so 2.51 times the 5 watts will be 12.55 watts of ERP.

Just imagine a gain of just 1 dB at 100 watts will give an ERP of 126 watts, nothing to sneeze at. -- A gain of 2 dB; 100 watts times multiplier 1.58 = 158 watts ERP.

Now for the big DXers with a wide spaced beam of 7 dB forward gain and running 1500 watts output from their amplifier.

7dB at multiplier 5.1 times 1500 watts output = 7650 watts of ERP. You better wait till those boys work the DX and leave, then you can give it a try; or better yet, follow suit.

Here is the dB chart and the multiplier, you can see 3 dB = 2 times the power.

DB X
1 1.26
2 1.58
3 2.00
4 2.51
5 3.16
6 3.98
7 5.01
8 6.31
9 7.94
10 10.0

2594. Re: [m_a_r_s] Green Bird ??

Yahoo group: m_a_r_s
Date: 2005-08-13 15:05:05 UTC
From: nilesh rathod
Topic: 2565 Message: 2594

Hello Parin,

All the sets are lying in Avija Building with all our MARS Assets.. As far as your set is concern, if you remember you had taken I set to fix it yourself and brought it back in 4 pieces.. I had asked you to collect the same, but you said that you will collect it later... The same can be found at Avija Building with rest of the sets..

As far as money is concerned neighter me or MARS have any money balance .. all the money was spent on basic cost of sets and upgrading.. such as new cover powder coating, new front panel, switches, speaker etc...

You may please collect your set, which is in 4 pieces, along with it cover etc from Avija Building...

73
NLF

Hi NLF,

Just wanted to ask you about the money that we have paid for the Green Birds, i.e., Rs.2000/- per set (where, I have paid Rs.2000 for one set).

Is the money with you or MARS Treasury ???

This I am asking you because of the frozen response from Arun Singh (AUA) and hence felt worried since its been so long that we have given you the money hoping to receive the sets asap and get going on the 2m atleast.

Also, did you communicate with AUA regarding the Green Birds and his frozen response to our enquiries for the Green Birds???

When will we get the rigs that have been repaired by Rahul / WJM ??

Hi Nlf
Even I tried a lot to contact AUA from last one year, previously
he used to tell me that Rahul has already done few sets and you
shall get your set in few days, this was the talk in Jan 2005,then
he said that all the rigs are with NLF and he is not aware of what
is actually happening to this issue, but from last few weeks he is

not in touch neither he answers any message left at his home,
Even i am waiting for my green bird. Its almost more than a year
that i have paid for my greenbird.

Subject: RE: [m_a_r_s] Green Bird ??

Dear Nilesh,

I completely agree with JPN. I had asked AUA a couple of times about this set. But, he said that he is unaware of any such sets given to him by you and that I also remember that he was asking people during the meetings prior to Hamfest about cheap VHF sets for Rs. 1500/-.

Please confirm with AUA in person regarding the sets. Also, as per Rahul's (WJM) mail, he has already repaired few sets.

Where are those sets ???
Have they already been distributed ???
If so, to whom ??? PLease mention their names.

If not, when can we have those sets???

AUA is not available on phone now as his Cell phone is out of order, and when left a message at his home, neither does he call back.

Please do something in this regards.

73's,

Parin / VU2PIC

Dear Nilesh.

Regarding Green Bird, VU2AUA has no proper answer:

I want to know the following and asked Arun Singh but
he informed that only NLF can confirm:

1. Total no.of Green Birds booked by Mars
2. Total no.of sets recevied by Mars
3. Total no. of sets distributed.
4. Balance sets in stock.

5. No.of persons booked.

I have handed over to you full payment of Rs.4000/- to
you on behalf of VU2GIB Mukund Gubbi & VU2HBN Haridas.

Hope to hear from you.

2595. Re: [m_a_r_s] Green Bird Status..

Yahoo group: m_a_r_s
Date: 2005-08-13 15:27:02 UTC
From: nilesh rathod
Topic: 2565 Message: 2595

Hello JPN,

I have a very limited skills in electronics and I have done all I could like getting the new covers the front panel, fixing a new speaker etc.... In fact VU2ZRS, VU2WET (who specially came from Pune) to help us fix the sets... we sat the whole night and fixed the speaker, base bushes etc... we did all we could do...now it was left to the techincal guys to tune them to HAM BAND..

Rahul has been kind enough to help us fix some of the Green Birds.. he even taught VU2AXN how to fix these sets... unforunately he did not have time to fix all the sets...

few members have even taken their sets to fix it themselves, and all have brought them back unsuccesfully....

It is quite ironic that hams in delhi, lucknow have managed to fix these sets and are using them for past many years. MARS, a society of 240 odd members, does not have a single qualified electroncis guy... if there are any... they are not interested in helping us...

As far as VU2AUA is concerned, he on the managing commitee had taken up the charge to follow up the matter... for old and new green birds... if he is not answering I cannot help it....

All the old green birds are lying at Avija Building... if members are interested they can collect (from AUA) and fix their sets...

VU2JPN during JNA days use to do a lot of electronic work,,, now he is not at all interested in helping to fix the green birds... he was not even come to fix the speaker or panel or switches etc... everyone wants everything on the platter.... ready made...no one wants to chip in....

VU2PIC took I set and brought it back in 4 pieces... all blew 4 spare power transisters..give to him . and now they talk about money ??......

Do you guys have any shame ? come forward and help to fix these sets and solve these problems,.... rather then make just QRM....

NLF

Jaiprakash Pullakudy <vu2jpn@...> wrote:

Dear Parin

Koi Answer Nahi Dega. NLF & AUA kohi ye clear karna
hoga.

If you ask NLF he will guide to AUA, AUA ko Pucha to
NLF ke taraf batayega.

Do no Topi lagarahai.

Mars Committee any answer for this?

During distribution of licences NLF had compelled
SWL's to put up Antenna and many SWL's did it. Then
booked Green Bird. Ab Antenna Rust ho raha hai.

VU2GBI had made compelete set up except VHF set and
awaiting to be on Air - more than one year.

Green Bird to Udgaya, Ab use AGM'me hi pakadna padega.

NLF / AUA your answer awaited before that.

Hi Ankur and all those taking the initiative in Ganesh Visarjan!
i will not be able to attend the meeting on 14th Aug, but i am very much in for the event, please do count me as the volunteer. And please let me know what are the plans for the event.

Thanx
saurabh

2604. Re: [m_a_r_s] Digest Number 1037

Yahoo group: m_a_r_s
Date: 2005-08-14 09:39:37 UTC
From: Rahul Srivastava
Topic: 2604 Message: 2604

Hi!

Nilesh is right I enquired from few friends, sets are there with society. Nothing is lost even now. I had personal modified and tested 10 of these sets. So they should be in working order or may require only slight touch up.

As for the remaining 5 sets I can help with spares to get them on air during my forthcoming visit. I think only 15 sets were bought in first lot.

Arun Singh has booked 6 sets with me they obviously will be provided ready to operate. I making arrangements for sending them over.

As suggested earlier during my visit we can try to manage a 2 day workshop and get older ones going. Who knows it may turn out as great eyeball and some good constructive activity.

It would be productive if some practical approach is taken into the matter. I am sure all can squeeze out some time for a workshop. Nothing else it would just enhace your skills.

Subject: Re: Green Bird ??

Hello Parin,

All the sets are lying in Avija Building with all our MARS Assets.. As far as your set is concern, if you remember you had taken I set to fix it yourself and brought it back in 4 pieces.. I had asked you to collect the same, but you said that you will collect it later... The same can be found at Avija Building with rest of the sets..

As far as money is concerned neighter me or MARS have any money balance .. all the money was spent on basic cost of sets and upgrading.. such as new cover powder coating, new front panel, switches, speaker etc...

You may please collect your set, which is in 4 pieces, along with it cover etc from Avija Building...

From: nilesh rathod
Subject: Re: Green Bird Status..

Hello JPN,

I have a very limited skills in electronics and I have done all I could like getting the new covers the front panel, fixing a new speaker etc.... In fact VU2ZRS, VU2WET (who specially came from Pune) to help us fix the sets... we sat the whole night and fixed the speaker, base bushes etc... we did all we could do...now it was left to the techincal guys to tune them to HAM BAND..

Rahul has been kind enough to help us fix some of the Green Birds.. he even taught VU2AXN how to fix these sets... unforunately he did not have time to fix all the sets...

few members have even taken their sets to fix it themselves, and all have brought them back unsuccesfully....

It is quite ironic that hams in delhi, lucknow have managed to fix these sets and are using them for past many years. MARS, a society of 240 odd members, does not have a single qualified electroncis guy... if there are any... they are not interested in helping us...

As far as VU2AUA is concerned, he on the managing commitee had taken up the charge to follow up the matter... for old and new green birds... if he is not answering I cannot help it....

All the old green birds are lying at Avija Building... if members are interested they can collect (from AUA) and fix their sets...

VU2JPN during JNA days use to do a lot of electronic work,,, now he is not at all interested in helping to fix the green birds... he was not even come to fix the speaker or panel or switches etc... everyone wants everything on the platter.... ready made...no one wants to chip in....

VU2PIC took I set and brought it back in 4 pieces... all blew 4 spare power transisters..give to him . and now they talk about money ??......

Do you guys have any shame ? come forward and help to fix these sets and solve these problems,.... rather then make just QRM....

From: ULHAS
Topic: 2605 Message: 2605

Hi all
I know this is not directly related to our activities,
but still I feel this is one of the important event
which we should not miss if we can help it. Please
read on. This was a forwarded message.:

Planet Mars will be the brightest in the night sky
starting August. It will look as a large full moon to
the naked eye. This will culminate on Aug. 27 when
Mars comes within 34.65M miles of Earth. Be sure to
watch the sky on Aug. 27, 12:30 am. It will look like
the earth has 2 moons. The next time Mars come this
close is in the year 2287. Share this 2 your friends
as NO ONE ALIVE TODAY will ever see it again

2606. qsp from vu2cbu about ganapati visarjan meeting

Yahoo group: m_a_r_s
Date: 2005-08-14 12:53:37 UTC
From: ULHAS
Topic: 2606 Message: 2606

List of members who attended a meeting to discuss
Ganapati Visarjan Amateur Radio support.
1. VU2HIT
2.VU2UBP
3.VU2AXN
4.VU2LOC
5.VU2SFH
6.SWL Nilesh Dixit
7.VU2CBU
8.VU3PPE
9.VU2ZRS
10.SWL Rajashri Sarvagaud
Report of meeting held on 14th August 2005 @Bandstand
Cooperage Garden.
Meeting was held in the sylvan surroundings of garden
near Mantralaya in the Traffic Police garden. Started
@10.30am & was over @11.45am.
Topics discussed were whether there should be
participation from us for ganapati visarjan as no one
seems to be coming forward to hold the torch. It was
suggested & accepted by all that we should go forward
with providing support to the authorities as we had
done in the past. OM Huzefa informed that he has
attended the meeting organised by Mumbai Police for
the purpose & support was assured from them also.
We have discussed the logistics & the general support
that is required. We have shortlisted a list of 28
amateur radio enthusiasts who are willing to
contribute there might for the event. 21 full time & 7
part time members. ie from morning of 17th September
2005 to morning of 18th September 2005.
The names of members shortlisted was on confirmation
from them. Any one interested can contact vu2hit or
vu2cbu for the purpose of confirming their
participation.
The major concern that we felt unanimously was the
finances for the event, but we felt this can be
overcome with a little bit of efforts.
We will be posting further mails on the developments
as & when the need arises.
73 till then.
This is a message forwarded on behalf of VU2CBU OM
Prashant Koli.
btw: everyone felt the qth was great & further
meetings may be held here. problem is the place is

being run by prajapita brahmakumaris & they don't
normally allow any meetings to be held , but that will
be discussed with them & hopefully sorted out

2608. Re: About MARS

Yahoo group: m_a_r_s
Date: 2005-08-14 13:27:41 UTC
From: harshvardhan_k
Topic: 2605 Message: 2608

Hello Ulhas,

Sorry to spoil your MARS party. This email is a hoax.
That email is a recycled email from 2 years ago.
Mars was closest to Earth in 2003. Read the following
article for details.

----
http://space.about.com/od/astronomynews/a/marsclose2005_p.htm

Close Approach of Mars in 2005

From Nick Greene,Your Guide to Space / Astronomy.
Will We See a Record Approach - Mars Closest to Earth?
Date: 6/16/05

Take a look in the night sky.

Does the Red Planet, Mars, seem bigger than last night?

Well, you'd probably need extremely good eyes to actually tell, but if
you said yes, you'd be right. Each night, Mars is getting closer to
Earth (by about 23,500 mph). It will reach its closest point on this
trip on October 29, though the best viewing time will probably be
Halloween Night.

What about the email?

Will We See a Record Approach - Mars Closest to Earth
It is possible you've received an email which says that Mars will be
closest to Earth in August in 50,000 years. Sorry, that was 2 years
ago, you're reading a recycled email. This year's closest approach
will be October 29, and although it will be spectacular, it is not a
record breaker.

So, why are we getting closer to Mars? Imagine two cars on a race
track. If one is closer to the center of the track and traveling
faster, it will eventully catch up to and pass the outer car. This is
what is happening with Earth and Mars, we are "lapping" the Red
Planet.

Those of us who simply enjoy looking up at the night sky are not the
only ones interested in Mars' close approach. NASA is planning to
launch the Mars Reconnaissance Orbiter (MRO) on August 10th, 2005. It
will take over 6 months for the orbiter to reach the Red Planet. This
timing will allow MRO to overtake Mars and arrive in March 2006. Once
it enters orbit it starts a 2-year mission to map Mars in great
detail. The MRO has high-resolution cameras which can spot objects as

as small as 1 meter or less. It will use a RADAR sounder to search for water and spectrometers to look for minerals.The orbiter will also help us learn more about Mars weather aptterns.

On Halloween night, 2005, will be the best view. It will rise at sunset and hang overhead through most of the night. So, grab a sky map and start watching the approach of Mars, then enjoy the big show on October 31.

From: Parin Gangar
Topic: 2565 Message: 2610

Dear NLF,

Asking about the Money was a fairly Frank Question. I did not know
that you did not like frank attitude from others except you.

As far as chipping in and giving helping hand for getting the sets is
concerned, I was fairly gutsy in that case to have atleast given it A
try once and unfortunately failed to get the sets going.

Is it fair to label guys who are Frank and having Guts as
shameless ??

Just because we were busy with our Morning Qth and were not in
touch with you guys ???

Just because I had paid the money am I to be stamped with the seal
of BREAKING THE SETS into 4 pieces and denying me a working set
now???

Its because of this attitude and behaviour towards the people who
paid money for the sets are other members not taking interest.

Did you hold the Hamfest Committee responsible for poor attendance at
Hamfest 2004 ??? No..Why??? Because they have not paid any
Money to you and hence you cannot pressurise them???

You said you and MARS Managing Committee has put up lots of efforts
in getting our Licences and hence we can pay our tribute to them by
atleast coming on the air. We agreed...Why?? Because, we had faith
in you as the MARS Secretary.

You said install antennas atleast till you wait for the Sets.
We agreed...Why?? Because, we had faith in you as the
MARS Secretary.

You said there are CHEAP VHF SETS from Agra for Rs.2000 and that
pay money immediately for that. We paid...Why?? Because, we had
faith in you as the MARS Secretary.

You said the sets need to be fixed. And you even did the Cosmetic
Treatment of the sets by getting powder coated covers, LEDs, etc..
Then, you said you were not able to get the sets on HamBands as that
was too technical for you to digest.

I said OK, let me try as I did not believe in receiving anything
on a PLatter and gave it to a friend in Vile Parle who is
a Genuine and expert electronics guy and was a student and my batch
mate of MARS's first classes.

But unfortunately, he was not able to get the sets working and also blew the power transistors in this attempt. I returned to you with that set undeterred, thinking we would still get the sets going somehow. Why ??? Because we had faith in you as a friend and secretary of MARS.

But, what did you do??? Simply, labeled that I have to carry this broken set. And that I am responsible for its now sorry state. Did you tell the same to those who had given the other sets a try and burnt the PCBs ???

Why??? Because they had not paid any money to you ????

Is this how A Secretary of the Soceity treats its member ?? Ain't you the same person who was very much enthusiased to bring fellow licence holders like me on air ?? In this journey, when I tried helping you and failed to do so, is it fair on your side to blame me completely.

Who should be feeling the shame now??? Me ???

Ask this question to yourself and you would get the answer.

As far as the Set is concerned, I am still willing to help by co-ordinating with AUA (provided he replies back) or take up this completely on my shoulders to co-ordinate with Rahul (WJM) and get the sets going.

I AM NOT TAKING THE SET IN BROKEN PIECES AT ALL AS I WAS PROMISED A FULLY FUNCTIONAL SET AT A PALTRY PRICE FOR WHICH I HAVE PAID YOU THE "HARD-EARNED MONEY OF MY PARENTS" AND NOT MINE, AS I WAS STILL A STUDENT THEN.....

YOU CANNOT BLAME ME FOR THE BROKEN SET AS IT WAS A PART OF OUR ENDEAVOUR TO GET THE SETS GOING.

2611. Help - PDF on Learning Morse Code required.

Yahoo group: m_a_r_s
Date: 2005-08-14 14:36:37 UTC
From: Sriram N
Topic: 2611 Message: 2611

Hi all:

I've got a brief respite for the next two days, and am thrilled to see so much activity on the MARS list, and also the plans for the Visarjan ! You know, I'm actually deliberating quitting my job for some weeks and then taking time off to live life again, perhaps I'll join the active Visarjan volunteers as an rookie - to observe and learn (I promise to not get in the way) ! The last I saw a HAM or a hamset was in 2004 during the AGM... and I'm out of touch with the HAM lingo.. All my fault entirely, I just cannot blame anyone ! ;)

Anyway, I wish to seriously get started with learning Morse code again.

From the Amateur Radio CD-ROM that MARS had give to the 2003 batch, I'd really liked the PDF on Learning Morse Code. This was a PDF filled with Dos and Don'ts.

Could someone send me this PDF please ? I think this PDF is a bit big, so I'd rather request someone with broadband access to help me out, than a person with a dial up account.

Thanks guys,

-- Sriram

2612. Re: Green Bird ??

Yahoo group: m_a_r_s
Date: 2005-08-14 14:37:06 UTC
From: Parin Gangar
Topic: 2565 Message: 2612

Nilesh,

As stated in my previous mail, I was promised a fully functional set.

The broken set was an unfortunate outcome of our endeavour to get the sets going. And that I am not to be held responsible for this as you had not laid any conditions like this before giving me the set for getting it repaired.

Remember your words, you had said, "at least get this set working, then we will give other sets for repairs".

You never said that if the set is broken, I would have been liable for this. Had you said that I would never had been GUTSY to carry that set to my friend and our batchmate for repairs.

You see, people like me don't like to put their Parents' Hard earned money in such high risk.

I was a fool that I did not realise this earlier. I think the others who have paid money know this and are keeping mum.

THIS IS FOR THOSE WHO PAID THE MONEY FOR THE GREEN BIRDS ::

DO YOU GUYS WANT EVERYTHING ON PLATTER ???

OR HAVE YOU GUYS GIVEN RS.2000 AS A DONATION TO MARS AND HENCE ARE MUM ???

HAVE SOME GUTS AND BE FRANK TO COME FORWARD TO TAKE THIS RESPONSIBILITY, JUST LIKE I HAVE , IN MY PREVIOUS MAIL...

Hope the message is clear.

Hey Sriram,
Wud be great to meet you if you can make it to Mumbai soon. Also since I use a dial-up I really cannot upload a very good file on learning CW. However I recommend you please search on the net for "the art and skill of radiotelegraphy-3rd edition" by n0hff. Great stuff, a bible in itself.

By the way did you try CW palyer from F6DQM?There is another good software "Koch Method morse trainer" bu G4FON. Do check it out. your feedback awaited.

Well well what are we having here? Any QRM is unwelcome and too bad Ajay sir is gonna realise it soon. I suggest we try locating these idiots first(a real fox hunt and the fox is to be hunted down so that its head can be hung from the walls as a trophy HI HI). Maybe we can get in touch with these chaps and give them an official warning and locate the crooked icom dealer as well. If that has no effect we can pass it on to WPC and pester them until action is taken.

Or we do it like young college brats " step outside and i'll show ya what its like to mess with an angry young ham."

for more suggestions drop a personal mail :-)

may all the static in this atmosphere destroy their rigs. Amen.

Ankur Puranik <ankurpuranik@...> wrote:

Unknown Fellow : " Calling Ajay sir Ajay sir"

Ajay : " Ajay replying"

U.F.: "Sir aapne jo khana mangaya tha woh ban gaya hain , kisi ko bhej do collect karne ko"

Ajay: " ha theek hain main bhejta hoon"

U.F. : "Sir, zara jaldi bhejna, nahi to parso ke jaisa khana yahi reh jayega aur kharab ho jayega"

Ajay: "nahi nahi bhejta hoon bhejta hoon"

XYZ calling Ajay sir: " Sir light chalu karna hain kya? "..... n it went on....

The above conversation took place at around 7:00 pm on 145.000 Mhz... I told VU2 LOC and VU2 HIT to monitor n they too did hear the QSO.

How long are we gonna take the crap of these people using our band?

I guess it might take some time for WPC people to take some action against these people, or rather the ICOM DEALER or simply they may ignore the whole issue.

What we can do is especially we hams from south mumbai is jam the frequency when we hear them talking on 145.000 Mhz..

Senior Hams and others please suggest some way to get rid of this.

or do we shift our repeater to 145 and make qrm on their radios??

And this is available as an official download (942 kb) at
http://www.qsl.net/n9bor/n0hff.htm

Thanks a ton for suggesting this name !!! It'll be a while before I get out of
Nashik and venture to Mumbai.. But I intend to be there for the AGM !

Since my last post that time, I hadn't really logged on much. I read your
advice on the CW Player today, and had intended to download CW Player tonight.
But I remember that UGO had told me about the Koch method being effective. I'll
take a software for that first, followed by CW Player.

Thanks for the prompt response ! :)

From: Sriram N
Topic: 2619 Message: 2619

Hola, Martians !!!!

For some reasons (boredom and a bout of self-improvement being foremost), I've challenged myself to be able to understand Morse code again. There's something really stimulating when one learns something new.

Here are some links that I'm investigating:

http://www.qsl.net/n9bor/n0hff.htm - Has the amazing 942 kb book, "The Art and Skill of Radio Telegraphy".

http://dot.trwagner.org/ - This has a good collection of PDF docs.

http://hfradio.org/koch_1.html - On the Koch technique

http://www.socorroara.org/sara/n1irz.html - Some history on the Koch Technique.

http://www.g4fon.net/ - A Koch technique trainer !!!

My biggest thanks to VU2CDP, for mentioning the phrases "The Art and Skill of Radio Telegraphy" and "Koch Technique".

Yea indeed the location was too good ! I dont think there would be any problem in having meetings there in future provided they are peaceful like todays meeting.

All members interested in participating in the Ganpati Visarjan Ham Radio Support may please contact:

VU2 HIT on 9892786110

VU2 CBU

Or

VU2 AXN on 9323153504

or simply send an sms on the above numbers or an e-mail on the mars main group.

It the next meeting which will be held very soon. The date for the meeting will be informed on the mars e-group.

Thanks to you as well Sriram for the links. Its nice to know there is somebody else besides me who feels sad about losing touch with CW and is doing something about it.

best 73,
VU2CDP.

Sriram N <sriramx_2000@...> wrote:
Hola, Martians !!!!

For some reasons (boredom and a bout of self-improvement being foremost), I've challenged myself to be able to understand Morse code again. There's something really stimulating when one learns something new.

Here are some links that I'm investigating:

http://www.qsl.net/n9bor/n0hff.htm - Has the amazing 942 kb book, "The Art and Skill of Radio Telegraphy".

http://dot.trwagner.org/ - This has a good collection of PDF docs.

http://hfradio.org/koch_1.html - On the Koch technique

http://www.socorroara.org/sara/n1irz.html - Some history on the Koch Technique.

http://www.g4fon.net/ - A Koch technique trainer !!!

My biggest thanks to VU2CDP, for mentioning the phrases "The Art and Skill of Radio Telegraphy" and "Koch Technique".

2633. Green Bird

Yahoo group: m_a_r_s
Date: 2005-08-16 12:40:21 UTC
From: Jaiprakash Pullakudy
Topic: 2614 Message: 2633

NLF

Do you remember, while booking for green bird you informed that you are intending to purchase the Green birds in lot, which are in WORKING CONDITION, and yourself and VU2RIO will be going to collect it personally. The only modification required was to switch over to Ham bands by changing a chip or so.

The actual cost of these sets were much cheaper but it was agreed to get for Rs.2000/- which included To & Fro traveling Expenses and a contribution to MARS. Accordingly I booked 2sets for VU2GIB & VU2HBN.

The 5 sets shown to me at your QTH, to fix up, was so horrible that I just had to avoid it. I anticipated all blame will be on my head if the set are not found working. When I enquired for the working sets, the same was not available with you. Fixing up of speakers, knobs etc are not a big issue.

I did follow up with you for the working sets which you always had different answers. VU2GBI was in constant touch with you. On your pressure to install antenna (else licence will not be handedover) he did erect GT 5/8 and the shack was kept ready expecting Green Bird. ?Bechara panchi ke bina aaj bhi uska pinjra khali pada hai?. So why should I not feel bad. Hence these are not QRM emails.

The last answer you gave me in the monthly meeting was ?I will give you scrap ? if you want you take it? . The way you answer others shows yourself and my decision was to keep away from wrong persons like you. That made me decide JUST participate in MARS events and do work for Ham radio as per my wish. I am doing it till now.

Now MARS has become second JNA, more ?I? than ?we? which has destroyed the attendance and interests of the real martians.

Yes during JNA days I used to assemble kits and lot of time and money was spent on Ham Radio and the Club. Later due to lot of problems, as you are also aware, we formed MARS.

You do not explain that you are a lay man to electronics. If you are a lay man in electronics, I am should say I do not know what is electronics.

I again repeat this is not a QRM mail. I had to reply since your excuse to VU2GBI is never clear.

Can any other committee member reply to my mail than NLF since procuring was done in the name of MARS. Koi sharmana nahi. Shame is a Bold & Beautiful word.

HELLO JPN

Gosh you sound like one hell of a lot angry young man , never seen your this side of your personality , and hey you do write well , but you know , you write proses (FUN ?PUN INTENDED), write poetrys rather , see it was GREEN BIRD , we were suppose to be intending to catch , like you , including me have gone or going thnrough same fate , but guess , bird was smarter then us , it never got trapped , LOL , SO TAKE A CHILL PILL , and have a good feeling abt , you letting bird go scot free rather then trapping it , it wud have been like us , neither can run away from MARS , nor be totally with it .

Hey by the way can you help me in getting receipts of donations made by my contacts , during HAMFEST, those guys need it to file there RETURNS , like sarkari office am running pillar to post for those receipts , cause those people paid for a cause , and we are not evn honouring then by giving them receipts ,thats the least we cud do , what say , anyways , i feel nice , sharing my this state with you , as they say its nice to talk out ,

And do you know , i have taken HIGHWAY , when i was offered a choice between HIGHWAY OR MYWAY , CAUSE ON HIGHWAY I DRIVE MY WAY , (LOLLLLLLLLL).

Anyways have fun.

From: Rahul Srivastava
Topic: 2642 Message: 2642

Hi!

Friends kindly note these sets particularly Green Birds as purchased from Agra surplus mkt. You can never be sure that these sets are completely working.

Even if they are working it is not so a simple matter to just change a chip and bingo be on HAM bands. It requires some work. For those keen kindly go thru the modification procedure posted on other groups.

http://www.indiahams.com/homebrewing/greenbird1.htm

As for the cost when these sets were available there they cost abt Rs650-750/ depending on condition. Mic cost was extra another Rs125-150. Spk also was around Rs100/.
The modification was a complete card unit that was supplied to MARS for Rs200/ each, (actual cost) glass epoxy board, rep switch , and 512K programmed ROM. This all alone comes to around Rs1200/. Some spare devices were also procured . Add to this cost of new cabinet powder coated at least Rs250/ and switches abt Rs100/. Cost incurred each set was definately more than 1650/.
Expenditure incurred in getting the set should also be included. I do not see it right to blame anyone for making money out of it.

Please note all the components and rigs are still there at MARs. If some would care and power few I am sure some may still be working on HAM bands.I would extend all help in getting them on air even those that have been much damaged. I request all to spare some time to dust them and get it going in coming month.

All the prices are my observations but I have little reason to expect them to vary much. Also note that out of 15 sets 10 were indeed in working condition. It is pity just because of appearence people didnt work upon them, they are well built and after all had been workhorse for our forces.

Subject: Finally it's here!!!

Guys got my ticket today by registered post. Say hello
to VU3TMM :-) Dunno from where they allocated me this
call sign but the important thing is finally I got my
ticket. It was a long wait of 2 yrs for me.

Thanks to all Martians for all the help and support
they gave.

Now guys especially the seniors I need your help and
guidance in getting a handy. I'm hoping to get a dual
bander so that I can participate in both the VHF and
UHF nets or should I get a single bander? Any suggestions
regarding the brand, model that I should go in for?
I think SFN had got his handy, think it was a ICOM T7H
home delivered through aesham.com. SFN if you are
reading this can you guide me regarding the procedure.
In the VUHams yahoo group some one had mentioned the
following wireless dealer in Kerala.

www.jesuradios.com.
No contact details are given. Anyone knows this dealer?
All suggestions are welcome.

Waiting to get on the air.....

Subject: Re: Finally it's here!!!

Dear VU3TMM,
Congratulations!

I am glad you finally got your license and are itching to come on air. I suggest you either consider a Icom T90A or a Yaesu VX5R/7R. A dual bander is always better for obvious reasons. Both these handies are so called Tri Banders anyways.

Depending on your location i might even recommend a dual band base station if budget is not a constraint. Also make sure you have a good antenna even if you are using a handy.

Check out www.gigaparts.com ;
www.aesham.comor
www.hro.com to check out prices. Also if you are

willing to pay a bit more you can get these rigs delivered to your house
from a dealer in Bangalore VU2KKZ- Rajaram (digitronics.india@...)

You may speak to him and give him my reference as i have already dealt with
him in the past.

If you have any further questions email me direct.

Welcome on board

[I add]
Given a choice, my suggestion is don't buy Yaesu. Most of the times the rig is not 'complete' i.e. they do not always give all kinds of sockets, inputs or output availibilities for jacks etc esp in the hand-helds. Both ICOM and Kenwood are good from what I have seen in the hand of hams in Mumbai.

Heh... in the programming world, we've arguments such as "which development environment is better - Eclipse or Visual Studio ?". Looks like flame fests abound where ever hackers gather !

It's great to see such discussions on the list :)

Well so far my experience with the T90 has been limited (may be just twice) so can't comment too much about the quality but then it is difficult to comment on HTs. I own a Kenwood TH K2-AT which is a mono band HT. Kenwood had come out with this model about 2 years ago after staying out of the handheld market for long. Although a 70 cm version is also available it is again a mono bander, TH-K4. Actually Kenwood isn't even competing with Yaesu and iCOM who seem to driving the amateur to upgrade his shack with newer and more expensive rigs(viz. IC 7800 approx. cost $ 8000 and the awesome FT DX 9000D at an exorbitant $12,000-14,000). Even the HT market is ruled by them but what one needs to understand is what the HT is going to do in the shack. Is your shack built around the HT where you do not have a VHF/ UHF base rig? Then you have to be really finicky before zeroing on a particular model. Cost and other options are secondary because here in India we take radios as an investment; so
be choosy.Why lament later on a rig that does not live up to your expectations?
Though I am not an expert on rigs but then there are a lot of hams who will tell you their opinion and reasons before they zeroed on a particular model.
So get hold of old timers and ask, ask & ask.

On a personal note go with iCOM for better after-sales service (extremely crucial) and also a wide range of models to choose from though they could make their rigs more aesthetically appealing. Yaesu makes great HF base stations especially for CW operation and they are also very rugged. iCOM base stations look like TVs with their LCD screens (frankly who needs a TV?)
But for the true audiophile, nothing beats Kenwood audio. Ask anyone.

Sent: Friday, August 26, 2005 3:32 PM
Subject: [VUHams] Italy's Red Cross says "YES" to Ham Radio

The Red Cross in Italy is turning to ham radio as an official communications channel.

The Italian Red Cross will activate its first ever amateur radio station in October under the callsign IZ4GQA. The pioneering new station is the brainchild of the radio communications department of the Italian Red Cross's Emilia Romagna region.

The department had been looking for a communication tool that would provide wider coverage than existing radio networks, incur no fees and be capable of working in crisis and emergency situations.

An amateur radio station appeared to be the perfect solution, but at the time the Italian Red Cross had never before been authorised to operate such a station. Not to be put off, members of the radio communications department obtained a copy of the official Italian amateur radio regulations and submitted a seven-page application for a licence to the Italian ministry of communications.

The application was successful and the Italian Red Cross was given the green light to operate an amateur radio station. An Italian Red Cross spokesman said: "Now we can communicate on all ham bands, being able to connect Red Cross stations not only in our region, not only in Italy, but all over the world."

- Jeramy Boot, G4NJH

Dear Ham
It has been our endeavour to make Ham Radio affordable and have always introduced low cost kits and handys from 1985 since the Dicksmith Kit days and last year we offered Vhf and Uhf handys for as low as Rs 6000/- .
It our great pleasure to offer at a new unbelieveable low price starting from Rs 3750/- either Vhf OR Uhf

Vhf and Uhf Handys with Standard accys include a 6V, 700mAh Nicad battery pack, rubber antenna, Dropin Charger.

Highlights & features of the New series of handy are
The Freq coverage Vhf 140 - 160 Mhz. and Uhf 430-450Mhz
PLL freq generation
Freq Steps 5, 10, 12.5, 25 khz
Direct Key board entry
Repeater Offsets (User selectable)
CTCSS
Memory Chs 80-99
Multi Scan function
Illuminated keypad
IF Dual Conversion
Modulation FM mode
Rx sensitivity better than 0.13uV (12 db SINAD)
Audio Output 300mW
Rx current 100mA
Standby squelched current 20mA
TX output 2.5 watt max with the supplied Nicad pack.
Transmitting Current 800mA
Weight 300gm
Dimensions 110H x 50W x 30D in mm (excluding rubber antenna)
Very compact fits into your shirt pocket and suits your purse too at this lowest price ever offered by anyone. Thats because we truly promote Ham Radio and make it affordable.

These models are from OEM suppliers of Kenwood and other Japanese models from China.
If you look carefully it is similar to the TH-22AT Kenwood but it is much smaller in size.

Dear Ham,

Please find below a brief list of items available for Ham Radio which may be of interest to you and your friends.

VHF HANDY Tcvrs : XX-71A Vhf Handy Rs 6000/-
XX-228 Vhf Handy Rs 4000/-
(plus local 10% CST for intersate or VAT 4% tax for local sale)

VHF / UHF Antennas: ? wave, 5/8 wave Mobile antennas range from Rs 1300 to
Rs 2500/-
Single 5/8, Collinear Double and Triple 5/8 base stn. Antenna
Fibre glass construction , range from Rs 2500/- to Rs 6500/-
Telescopic Whip antennas, Rubber Duckys for handys
Range from Rs 450/- to Rs 950/-

MOBILE MOUNTS : Gutter, Trunk, Magnetic, Hole Mounts Rs 1200/- appx.

CABLE ASSEMBLY: Coaxial Cable assembly 5 mtrs with connectors.Rs 800/-

COAX CABLES : COAXIAL Cables RG-213 Rs 50/- per mtr, RG-58 Rs 18/- mtr
& Special purpose cables.

SWR METER : Dual Meter SWR Meter works HF to VHF. Rs 1200/-
Coax patch cord, connector adapters optional

VHF LINEAR AMP : 5 watt IN 45 watt OUT VHF Linear Amp (12V / 5A)
Rs 4000

ACCESSORIES : Speaker Mics (950), Earphone Lapel Mics (450), Vox Units, Cigarette lighter DC Cables for mobile use, Ni-cad / Ni-Mh. Battery Packs,
Cellcase, Power Supplies, Battery Charger

NOTE:
Please contact us for your requirements.
Prices subject to change & availability at prevalent rates.

Dear Members

Our secretary had scheduled a meeting for the 14 Aug, but did not showup on the day of the meeting nor did show any interest in conducting the meeting. We did not receive any mails or response from the secretary so finally the meeting was conveyed and chaired by OM VU2CBU Prashant .

We have received confirmation from the members who are willing to work full time & part time during Visarjan with their own equipments,members who are still interested kindly sent the confirmation by or before 03/09/2005 after which no request will be entertained.

Members who's name appearing in the list kindly re-confirm the equipment list with them and it availability to Ulhas by email - ulhasparalkar@... or on his cell 9820622237

Also Request member to kinldy get donation/sponsorship for this events

2671. P5 (North Korea) DXpedition cancelled

Yahoo group: m_a_r_s
Date: 2005-08-28 18:20:22 UTC
From: Deepak VU2CDP
Topic: 2671 Message: 2671

The following press release, dated 25 August 2005, comes from
Tom Anderson, WW5L
(WW5L@...)
Vice-President and Information Director, Lone Star DX Association
(http://www.dxer.org/lsdxa)

Apparent internal miscommunications within the North Korean government's Committee for Cultural Relations with Foreign Countries and the Ministry of Telecommunications and Posts over the approval of an operating permit to Dr.David Borenstein, KA2HTV, led the government to halt his recent P5 DXpedition before it could even begin, the New York physician said today.

However, the main purpose of his trip to North Korea was not amateur radio, but the donation of several thousand dollars worth of medical supplies from various Western countries to the Korean Medical Association. "I went to make sure these medical supplies got where they were supposed to," he said. Dr.Borenstein specializes in physical medicine and rehabilitation.

Another situation that may have also played a part in the halting of Dr.Borenstein's DXpedition operations was the death of his government assigned guide, one of the leading such guides in the country. The guide drowned at Wonsan, while he and other government assigned guides were escorting KA2HTV and others along the North Korean coast.

Dr. Borenstein's DXpedition costs were underwritten by the Lone Star DX Association (http://www.dxer.org/lsdxa) and equipment donated by many companies and individuals. Before he left the United States, Dr. Borenstein and the LSDXA were told his DXpedition operation should be fully accredited by the ARRL once he returned and submitted passport, visa, and photographic documentation showing he was in North Korea. This is standard procedure for DXCC DXpedition accreditation.

"The Lone Star DX Association is committed to the support of DX. We knew this would be a gamble, but thought the risk was worth it to try getting P5 back on the air. Hopefully our efforts and those of Dr. Borenstein has moved the ball forward in restoring amateur radio in North Korea," said LSDXA President Mike Thomas, NA5U..

The miscommunications developed when a Democratic People's Republic of Korea Cultural Relations official issued the operating permit, while the government's Telecommunications and Posts officials, had not formally processed KA2HTV's request for a permit to operate. Both agencies are part of the North Korean government.

Dr. Borenstein was planning on beginning his full time P5 operations on August 20, when DPRK officials suddenly called him into a meeting. "They told me the person who gave the authority in the committee should not have given it because of a mix up with the Ministry of Telecommunications and Posts," he said. "Up until then I had no idea that I would not be allowed to operate" as government officials had given no hint that the operating authority issued previously was not valid. "I was able to demonstrate amateur radio to these same government officials and showed them how it would benefit the country."

"But the inability to operate was devastating," he said. "After meeting with the government officials I just went back to my room for a while and watched the BBC, the only English language television program we could receive. I knew there were hundreds of stations around the world waiting to make a P5 contact and I could not get on the air."

"The Lone Star DX Association and I had planned this DXpedition for many months and many donors had given equipment and their time and effort to make this operation occur," he said.

Both KA2HTV and the LSDXA would like to thank the following sponsors for their donation of equipment: Tennadyne log periodic antennas, Yaesu and Vertex Standard radios, ACOM International amplifiers, Texas Towers, W4MPY-"The QSL Man", GigaParts, Buddipole, Hex Beam, High Sierra, Press Jones-"The Wireman", Heil Sound, North Alabama DX Club, Southeastern DX Club,
LDG Electronics, DX Engineering, Ham Radio Outlet, and W4HT Electronics. In addition, the following individual hams provided logistical and othersupport: WW5L, WY5H, K4UEE, K9LA, KC2MWA, K7JA, W4WB, W4RT, W5QM, W9GJ, W2RC,
QSL manager KK5DO, and the many members of the Lone Star DX Association.

Dr. Borenstein said these government officials confided to him they were hopeful a license for him to operate could be obtained in the near future, however no definite date was given. "They told me they would welcome me back, despite the fact it is very difficult for Americans to get a visa there."
Also, he added, there is no prohibition by the U.S. government against Americans visiting North Korea.

After the death of his guide, he said, many government leaders went into official mourning. "I couldn't ask them about radio matters as these people were in mourning, so that delayed everything another two or three days."

When he arrived Aug. 9 all of the radio equipment was processed through North Korean customs without problem and "it all went smoothly." Later the Telecommunications and Posts ministry officials asked to inspect some of his equipment, which included an Icom 735 and 706 MK2G, and a Yaesu 857, plus an
Acom amplifier. "They kept part of it for a week," he said, before ministry officials told him he would not be allowed to operate.

When first planning the DXpedition, Dr. Borenstein said, negotiations had centered on the donation of amateur radio equipment to the DPRK as "a measure of friendship." When the DPRK government took the equipment for inspection, they apparently thought this was the same equipment that was to be "donated."
The "donated" equipment taken for inspection includes KA2HTV's own personal Icom 735 transciever, a Hexbeam antenna, a High Sierra tripod, coax, a Yaesu rotator, and a dual voltage power supply. "The equipment was not seized, they knew I had other equipment, they could have taken everything, but they
didn't," he said, adding, "seventy percent of the equipment I took over there came back home."

A receipt thanking Dr. Borenstein for the "donated" equipment was issued by the DPRK's Committee for Cultural Relations with Foreign Countries.

KA2HTV does not consider this a failure, but rather a chance to open doors to North Korea for possible future amateur radio operations. "Although I didn't get a chance to operate

from P5, I believe the equipment donations and my visit planted the seeds for amateur radio operations in the future," he said.
"Some people may see this as a failure, but if you don't try, you'll never fail."

KA2HTV received his first amateur license in 1980 and earned his extra class license in 1984.

Dr. Borenstein has guest operated from the following club stations or as an individual from: SP5PBE in Poland, 4X/KA2HTV in Israel, JY6ZZ in Jordan, CO2KK in Cuba, and 9G5DR from Ghana.

This trip to North Korea was not his first. He was in the DPRK in July 2004 for similar medical related reasons.

Can anyone tell me which 10 sets out of the 15 sets have been modified to Ham bands ??? I mean is there any marking done on those sets.

As per Rahul's mail below, we should atleast try powering them and get them going on air. These can then be distributed to those who have paid the money for the same.

I am ready to co-ordinate for this if only our secretary allows me to do so. (Just like we had the Ganesh Visarjan event meet in our Secretary's absence).

Subject: Re: [m_a_r_s] Digest Number 1041(Green Bird)

Hi!

Friends kindly note these sets particularly Green Birds as purchased from Agra surplus mkt. You can never be sure that these sets are completely working.

Even if they are working it is not so a simple matter to just change a chip and bingo be on HAM bands. It requires some work. For those keen kindly go thru the modification procedure posted on other groups.

http://www.indiahams.com/homebrewing/greenbird1.htm

As for the cost when these sets were available there they cost abt Rs650-750/ depending on condition. Mic cost was extra another Rs125-150. Spk also was around Rs100/.
The modification was a complete card unit that was supplied to MARS for Rs200/ each, (actual cost) glass epoxy board, rep switch , and 512K programmed ROM. This all alone comes to around Rs1200/. Some spare devices were also procured . Add to this cost of new cabinet powder coated at least Rs250/ and switches abt Rs100/. Cost incurred each set was definately more than 1650/.
Expenditure incurred in getting the set should also be included. I do not see it right to blame anyone for making money out of it.

Please note all the components and rigs are still there at MARs. If some would care and power few I am sure some may still be working on HAM bands.I would extend all help in getting them on air even those that have been much damaged. I request all to spare some time to dust them and get it going in coming month.

All the prices are my observations but I have little reason to expect them to vary much. Also note that out of 15 sets 10 were indeed in working condition. It is pity just because of appearence people didnt work upon them, they are well built and after all had been workhorse for our forces.

Subject: Finally it's here!!!

Guys got my ticket today by registered post. Say hello
to VU3TMM :-) Dunno from where they allocated me this
call sign but the important thing is finally I got my

ticket. It was a long wait of 2 yrs for me.

Thanks to all Martians for all the help and support
they gave.

Now guys especially the seniors I need your help and
guidance in getting a handy. I'm hoping to get a dual
bander so that I can participate in both the VHF and
UHF nets or should I get a single bander? Any suggestions
regarding the brand, model that I should go in for?
I think SFN had got his handy, think it was a ICOM T7H
home delivered through aesham.com. SFN if you are
reading this can you guide me regarding the procedure.
In the VUHams yahoo group some one had mentioned the
following wireless dealer in Kerala.
www.jesuradios.com.
No contact details! are given. Anyone knows this dealer?
All suggestions are welcome.

Waiting to get on the air.....

Subject: Re: Finally it! 's here!!!

Dear VU3TMM,
Congratulations!

I am glad you finally got your license and are itching to come on air. I suggest you either consider a Icom T90A or a Yaesu VX5R/7R. A dual bander is always better for obvious reasons. Both these handies are so called Tri Banders anyways.

Depending on your location i might even recommend a dual band base station if budget is not a constraint. Also make sure you have a good antenna even if you are using a handy.

Check out www.gigaparts.com ;
www.aesham.comor
www.hro.com to check out prices. Also if you are
willing to pay a bit more you can get these rigs delivered to your house from a dealer in Bangalore VU2KKZ- Rajaram (digitronics.india@...)

You may speak to him and give him my reference as i have already dealt with him in the past.

If you have any further questions email me direct.

Welcome on board

Hi Parin and others,

What Parin wanted to say was as above but he did not trim his post. There was a HUGE AMOUNT OF UNNECESSARY STUFF with what he wanted to say.

Parin would you please remove all unnecessary text from your email before you hit the send button. You can achieve this formidable and gargantuan task by selecting the text you don't want and then pressing the magical button called Delete which you can find in atleast TWO places on any standard QWERTY keyboard. This way you will incur the displeasure of few, whom you can otherwise use to support your other ideas/actions.

Others who have been insensitive and indulge in the practice of HITTING REPLY WITHOUT TRIMMING posts are requested to do so from now on.

(end of announcement)

Please don't reply to this. JUST TRIM YOUR POSTS, MATE!

Nirav

2676. Green Birds, ganesh Visarjan & AGM

Topic: 2642 Message: 2676

Dear Members,

GREEN BIRDS..

I fail to understand the QRM for Green Birds, when the solution is so simple.

All members who have paid for green birds in the first lot of 15 sets like JPN, may approch VU2AUA or VU2CBU and take custody of their set. Then they may request VU2AXN to help them fix the set, if he is ready and willing to do so.

All the members who have paid in the second lot, recently, may follow up with VU2AUA or VU3WJM directly..

As far as Parin is concerned, he had already taken his set and brought back in 4 pieces. He being from a Electronics back ground was not expected to something like this. atleast he could have brought back the set in one piece he could not get it fixed.. as mentioned earlier he may collect his set which is in 4 pieces and do whatever he pleases to do with it.. but he cannot take any other set..

Members may please note that we (VU2NLF & VU2RIO) tried to help the members to come on air at a small cost of Rs.2000/-, our intentions were to increase VHF activity... VU2RIO being also techincally qualified and capable of fixing these sets. Unfortunately he is totally out of picture.. we expected other members of the society who are techincally qualified to come farward and help, but once again we were let down..

Please note that when you are going to get a VHF base station for a cost of just Rs.2000/- it is obvious that there is risk involved... all were aware of it.. it was calculated risk taken as hams in New Delhi & Lucknow had already fixed these sets and were active using them...The only set back is that unfortunately we don't have any techincal guys in our society of 240 odd members, if there are, they do not wish to get involve and help..

VU3WJM has already helped us in how to fix these sets... now guys have to come forward and fix them.

GANESH VISARJAN...

As far as Ganesh Visarjan is concerned, I understand by reading the mails that things are in order and a lot of members have come forward to take part in it...I am sure it will be a very sucessful event as always.

Now about me calling the meeting and not attending it.... Firstly I never called the meeting.. I had put a mail and informed that we are likely to hold the meeting on 14th, but will announce shortly... I had called VU2ZRS to book the B.S.Bengalle School for that 14th Sunday for the meeting.. But I was informed by him that the same is not available, because the principal is not available and we have not given them any letter.. I then informed VU2ZRS that we will pospone the meeting to 21th August..and keep the venue as B.S.Bengelle School, as all our members are familiar with the venue...changing the venue all the time does not make any sense, plus the members need to be informed well in advance...

I read the mail by VU2AXN on Monday 17th August, which he had posted on 13th August a day before the meeting, so it is quite abvious that I was not there.. In fact I understand the meeting was called and chaired by VU2CBU our treasurer...therefore I totally fail to understand the QRM by VU2HIT and VU2PIC about not attending the meeting...when I was not even aware of any such meeting...

All said and done I am glad that VU2CBU had taken initative and conducted the meeting and I am sure he must have appointed the Event manager for the same.. All well that ends well...

A,G.M..

A meeting was conducted at avija building few days ago, which was called by VU2ZRS.. many of our members were present during the meeting, specially the founder members (Thanks to VU2ZRS)... during the meeting we had announced that we should be in a position to conduct the AGM on 4th Sept 2005, provided the accounts are ready and audited...

I am sorry to inform that so far the accounts are not ready as our Hamfest Treasurer Milind Korde VU2IZO, who had promised during the meeting to meet us on the following tuesday to sort our the accounts, backed out and refused to come.... On one side he claimed to be a loyal member of MARS and on other he refused to complete the accounts...

Our MARS Treasurer VU2CBU has also not completed any work... I have been repeated following up with him, but so far I have not received any progress report for the same.. I understand that he does not have voucher and bills for most of the income and expediture last year and he stated that people have not submited the same...

From what I understand that the onus is on the treasurer to collect the voucher and make the payments immediately during the debriefing meeting of that event or latest by the next monthly meeting... unfortunately the same was not done.. please understand that I am not critisizing anyone but stating the fact...

Our Income tax Returns are not filed.. Our society has NEVER filed any returns with the charity commisioner atall in last 5 years.. which us mandatory.. I have repeatedly reminded all the past and present Treasurers to the same but unfortnately none of them have taken the initiative.... once again let me repeat understand that I am not critisizing anyone but stating the fact...

I have been called a dictator and task master and what not, because of my deadlines and running like the society like a business office... I have been doing so, because I know the responsibility of the secretary and of our legal standing as a society...For past 4 years I have ensured that the AGM is conducted on 1st May as required by our constitution... I know the efforts that me, VU2ICQ and VU2UGO have been putting to make sure that the we conduct the AGM on time..

Unfortunately this year I was in U.K and VU2ICQ is in Singapore.and hence the AGM was not conducted on time. Now I am in Pune and there is very little I can do from here.. I don't mind coming to Mumbai and sort out things, but I need our both the Treasurer to do some work before I come and not waste my time....

Nowadays a lot of people have ganged up together against NLF as everyone has his/her axe to grind. with me... because of my so called dictator and Task master's attitude... that is ok by me and expected... I do not wish to continue as the secretary anyway... like informed earlier I did not run for elections last year for the same reasons, but unfortnately I had to take the chair by default as VU2ICQ (our ex-secretary) has to QSY to singapore and there

was no one to take up the chair..

I therefore earnest request both the Treasurers (Hamfest & MARS) to please complete the accounts so that we can hold the AGM at the earliest and stop all this QRM...

73
VU2NLF,
Secretary MARS.

Parin Gangar <parin.gangar@...> wrote:
Can anyone tell me which 10 sets out of the 15 sets have been modified to Ham bands ??? I mean is there any marking done on those sets.

As per Rahul's mail below, we should atleast try powering them and get them going on air. These can then be distributed to those who have paid the money for the same.

I am ready to co-ordinate for this if only our secretary allows me to do so. (Just like we had the Ganesh Visarjan event meet in our Secretary's absence).

Hi!

Friends kindly note these sets particularly Green Birds as purchased from Agra surplus mkt. You can never be sure that these sets are completely working.

Even if they are working it is not so a simple matter to just change a chip and bingo be on HAM bands. It requires some work. For those keen kindly go thru the modification procedure posted on other groups.

http://www.indiahams.com/homebrewing/greenbird1.htm

As for the cost when these sets were available there they cost abt Rs650-750/ depending on condition. Mic cost was extra another Rs125-150. Spk also was around Rs100/.
The modification was a complete card unit that was supplied to MARS for Rs200/ each, (actual cost) glass epoxy board, rep switch , and 512K programmed ROM. This all alone comes to around Rs1200/. Some spare devices were also procured . Add to this cost of new cabinet powder coated at least Rs250/ and switches abt Rs100/. Cost incurred each set was definately more than 1650/.
Expenditure incurred in getting the set should also be included. I do not see it right to blame anyone for making money out of it.

Please note all the components and rigs are still there at MARs. If some would care and power few I am sure some may still be working on HAM bands.I would extend all help in getting them on air even those that have been much damaged. I request all to spare some time to dust them and get it going in coming month.

All the prices are my observations but I have little reason to expect them to vary much. Also note that out of 15 sets 10 were indeed in working condition. It is pity just because

of appearence people didnt work upon them, they are well built and after all had been workhorse for our forces.

Subject: Finally it's here!!!

Guys got my ticket today by registered post. Say hello
to VU3TMM :-) Dunno from where they allocated me this
call sign but the important thing is finally I got my
ticket. It was a long wait of 2 yrs for me.

Thanks to all Martians for all the help and support
they gave.

Now guys especially the seniors I need your help and
guidance in getting a handy. I'm hoping to get a dual
bander so that I can participate in both the VHF and
UHF nets or should I get a single bander? Any suggestions
regarding the brand, model that I should go in for?
I think SFN had got his handy, think it was a ICOM T7H
home delivered through aesham.com. SFN if you are
reading this can you guide me regarding the procedure.
In the VUHams yahoo group some one had mentioned the
following wireless dealer in Kerala.
www.jesuradios.com.
No contact details! are given. Anyone knows this dealer?
All suggestions are welcome.

Waiting to get on the air.....

Subject: Re: Finally it! 's here!!!

Dear VU3TMM,
Congratulations!

I am glad you finally got your license and are itching to come on air. I suggest you either consider a Icom T90A or a Yaesu VX5R/7R. A dual bander is always better for obvious reasons. Both these handies are so called Tri Banders anyways.

Depending on your location i might even recommend a dual band base station if budget is not a constraint. Also make sure you have a good antenna even if you are using a handy.

Check out www.gigaparts.com ;
www.aesham.comor
www.hro.com to check out prices. Also if you are
willing to pay a bit more you can get these rigs delivered to your house from a dealer in Bangalore VU2KKZ- Rajaram (digitronics.india@...)

You may speak to him and give him my reference as i have already dealt with him in the past.

If you have any further questions email me direct.

Welcome on board

Dear Nlf,

GREEN BIRDS...

I fail to understand why you are repeatedly telling just one thing that collect the sets and get them working from AXN (IF AT ALL HE IS FREE).

All those who have paid the money for the sets were told a working set for just Rs.2000/-. Was that a lollypop shown for collecting money and having a trip to Delhi.

Why do you incessantly keep telling about the Set being taken by me and brought back in 4 pieces ??? You very well know that we had jointly given it to a THIRD person for repairs and that I WAS NOT GOING TO WORK ON IT ... DO YOU REMEMBER THAT.....?????

When you have got this topic of being an Electronics guy or not being an Electronics guy, let me ask you ,

DIDN'T YOU KNOW THAT YOU YOURSELF ARE NOT AN ELECTRONICS GUY.......?????

YOU RELIED ON OTHER TECHNICALLY SOUND PEOPLE IN THE SOCIETY FOR THE REPAIRS OF THE SETS. BUT, WHEN YOU FAILED HERE, WHY DON'T YOU HAVE A BACKUP PLAN ???

YOU ARE CLAIMING TO RUN THE SOCIETY LIKE A BUSINESS. THEN, DON'T YOU HAVE A BACKUP PLAN IN BUSINESSES.

DO YOU ALWAYS BLAME YOUR MISTAKES AND WRONG ESTIMATES ON OTHERS IN BUSINESSES ???

I VERY WELL UNDERSTAND THAT THE TRIP TO DELHI WAS ONLY DUE TO THE INTENTION OF GETTING MORE ACTIVITY

ON VHF.

BUT THEN IF YOU FAIL IN THIS ACT, YOU CANNOT PASS THE BUCK TO THE FELLOW MEMBERS OF MARS.

AS WE ALL KNOW FROM THE PREVIOUS MAILS ON THIS ISSUE THAT PEOPLE HAVE PAID MONEY TO RECEIVE " A VHF set in working condition" and not "Junk needing repairs from people not having time".

As I have written earlier too, that I had pitched in earlier to get the sets running but, unfortunately it did not work and now I have landed with a BROKEN SET with my responsibility, even though I was not responsible for it.

This is really sad that when I am willing to coordinate with the concerned people (AXN / WJM) who can repair the sets, then I am told to just collect my set in 4 pieces and others are told to collect there respective piece of junk and get them repaired on there own.

Had you really thought of getting people on VHF, and were keen upon optimum resource utilisation, you would not have kept back the VHF base stations given to you by VU2IZO, Micky, in the cupboards unused but could have given those sets to people who have paid

money for green birds in the first lot to keep their enthu for the hobby going.

Arre, atleast had you returned those unused sets back to VU2IZO, then some other hams from the Thane batch would have utilised them and come on air.

But, I still fail to understand what your motive is behind keeping sets unused in cupboards like many other sets that are in the cupboards of many hams and are unused, where, these sets in MARS' case, are not MARS at all.

WHY ARE YOU NOT RETURNING THE SETS GIVEN BY VU2IZO BACK TO HIM ??? NOW, DON'T TELL ME THAT YOU WOULD BE RESOLVING THIS ISSUE IN THE AGM. AS THIS COULD BE RESOLVED IN ANY M.C. MEETING.

I know I have been a bit off track from Green Bird, but, have only placed the facts that you are refraining from.

And as you have said that you do not wish to be the secretary of the society, I would say that since you too have shown the traits of our fellow politicians of doing no good for the soceity, you do not deserve to be the Secretary of this society.

Other members, please forgive me for sending this mail without trimming, may be someone else is free enough to do so.

I don't mind coming to Mumbai and sort out things, but I need our both the Treasurer to do some work before I come and not waste my time....

Nowadays a lot of people have ganged up together against NLF as everyone has his/her axe to grind. with me... because of my so called dictator and Task master's attitude... that is ok by me and expected... I do not wish to continue as the secretary anyway... like informed earlier I did not run for elections last year for the same reasons, but unfortnately I had to take the chair by default as VU2ICQ (our ex-secretary) has to QSY to singapore and there was no one to take up the chair..

I therefore earnest request both the Treasurers (Hamfest & MARS) to please complete the accounts so that we can hold the AGM at the earliest and stop all this QRM...

73
VU2NLF,
Secretary MARS.

Can anyone tell me which 10 sets out of the 15 sets have been modified to Ham bands ??? I mean is there any marking done on those sets.

As per Rahul's mail below, we should atleast try powering them and get them going on air. These can then be distributed to those who have paid the money for the same.

I am ready to co-ordinate for this if only our secretary allows me to do so. (Just like we had the Ganesh Visarjan event meet in our Secretary's absence).

Subject: Re: [m_a_r_s] Digest Number 1041(Green Bird)

Hi!

Friends kindly note these sets particularly Green Birds as purchased from Agra surplus mkt. You can never be sure that these sets are completely working.

Even if they are working it is not so a simple matter to just change a chip and bingo be on HAM bands. It requires some work. For those keen kindly go thru the modification procedure posted on other groups.

http://www.indiahams.com/homebrewing/greenbird1.htm

As for the cost when these sets were available there they cost abt Rs650-750/ depending on condition. Mic cost was extra another Rs125-150. Spk also was around Rs100/.
The modification was a complete card unit that was supplied to MARS for Rs200/ each, (actual cost) glass epoxy board, rep switch , and 512K programmed ROM. This all alone comes to around Rs1200/. Some spare devices were also procured . Add to this cost of new cabinet powder coated at least Rs250/ and switches abt Rs100/. Cost incurred each set was definately more than 1650/.
Expenditure incurred in getting the set should also be included. I do not see it right to blame anyone for making money out of it.

Please note all the components and rigs are still there at MARs. If some would care and power few I am sure some may still be working on HAM bands.I would extend all help in getting them on air even those that have been much damaged. I request all to spare some time to dust them and get it going in coming month.

All the prices are my observations but I have little reason to expect them to vary much. Also note that out of 15 sets 10 were indeed in working condition. It is pity just because of appearence people didnt work upon them, they are well built and after all had been workhorse for our forces.

Subject: Finally it's here!!!

Guys got my ticket today by registered post. Say hello
to VU3TMM :-) Dunno from where they allocated me this
call sign but the important thing is finally I got my
ticket. It was a long wait of 2 yrs for me.

Thanks to all Martians for all the help and support
they gave.

Now guys especially the seniors I need your help and
guidance in getting a handy. I'm hoping to get a dual
bander so that I can participate in both the VHF and
UHF nets or should I get a single bander? Any suggestions
regarding the brand, model that I should go in for?
I think SFN had got his handy, think it was a ICOM T7H
home delivered through aesham.com. SFN if you are
reading this can you guide me regarding the procedure.
In the VUHams yahoo group some one had mentioned the
following wireless dealer in Kerala.
www.jesuradios.com.
No contact details! ! are given. Anyone knows this dealer?
All suggestions are welcome.

Waiting to get on the air.....

Dear VU3TMM,
Congratulations!

I am glad you finally got your license and are itching to come on air. I suggest you either consider a Icom T90A or a Yaesu VX5R/7R. A dual bander is always better for obvious reasons. Both these handies are so called Tri Banders anyways.

Depending on your location i might even recommend a dual band base station if budget is not a constraint. Also make sure you have a good antenna even if you are using a handy.

Check out www.gigaparts.com ;
www.aesham.comor
www.hro.com to check out prices. Also if you are
willing to pay a bit more you can get these rigs delivered to your house from a dealer in Bangalore VU2KKZ- Rajaram (digitronics.india@...)

You may speak to him and give him my reference as i have already dealt with him in the past.

If you have any further questions email me direct.

Welcome on board

2680. Import Duty under Ch#85-29

Yahoo group: m_a_r_s
Date: 2005-08-30 15:54:51 UTC
From: vu2nks
Topic: 2680 Message: 2680

Attn.All Hams,

Be it known to all,
I have imported Qty.1 antenna from
W-land.The antenna was assessed by
Customs in Bombay under Harmonised
Tariff Chapter Ref:85-29-xx-xx.
I was asked for W.P.C Lic/permit,
which I had not even applied for as it
was assumed to be not required.

I was told by the Jt.Commisioner
of Customs(with whom I sat with all the
reference books) that if I had produced
the WPC paper,the antenna would have been
assessed under Chapter 85-25-20-xx.

I paid the duty under protest on 29/08.
The officer agreed that General Exemption
#134 and bringing Amateur Radio antenna
into Ch 85-29-xx did not seem right.

Now that I have raised a protest,
posted the above,Will standby for
helpful! advise and opinions.

Hi,
I got jacked last year in importing a IC-T7 Handy
the store sent it via express mail and it ended up at the airport post
office.
and i ahd to pay the duty as there is now no provision for ham eqpt to get
exemption

cheers

2682. Guidance required

Yahoo group: m_a_r_s
Date: 2005-08-30 17:41:54 UTC
From: Deepak VU2CDP
Topic: 2682 Message: 2682

Hello all,

I am facing quite an interesting predicament. I am in the process of putting up my antenna on the roof of my building which happens to be a 7 storey structure in Mumbai. The antenna is a 5/8 g.p. for 2 mts. As a formality and necessity, I wrote to the co-operative housing society seeking their permission to erect the antenna. The society took up the matter in a meeting and jointly decided that I need to obtain a No Objection Certificate (NOC) from the local police station and submit the details of the antenna in terms of its physical shape. No amount of pleading helped. The photocopy of the licence was also given for their record and also the process of obtaining the ticket was explained including the bit about police clearance. But the society has stuck to its guns and demands the NOC else I may not be allowed to put up the antenna.

What is really irritating about this decision is the fact that it requires a trip to the police station once again. We all know how co-operative cops can be in such matters. With no offence meant to the police force, the experience during the licence obtaining process was frustrating enough. It took two days of leave from work to get it done("aap kal aao" was the usual refrain).

I need to know if anyone has faced a similar situation before. If yes, please tell me what was your course of action. I also need to know if there are any housing society rules that make it mandatory for producing NOCs inspite of having obatined the licence after all necessary clearances and permission from Central authorities.

As an afterthought, wonder what's gonna happen if I decide to put up a monster- size beam? Hi ! Hi !

Hi! Pareen and friends,

For those willing to work this is how you all should go about.

Remove top cover and check out there are no loose wires. Select those that are completely intact. Also note that the EPROM board is installed and all wires connected.

Do not plug a Mic as yet but apply power using a small abt 1-2 amp 12V supply.

Listen for the FM hiss. This indicates main RX board is working. Check for Red LED glowing on PLL board section in middle right the one on which EPROM card is installed. If the LED is glowing it indicates rig is dot on freq now all that needs to be done is connect to an antenna and receive signal transmitted from handy.

Rotate channel selector and see if the channel change if the unit has eprom card and channel indicator also changes than in all probability the rig has already been modified.

Once ensured connect a heavy abt 7-8 amp supply and Mic and go in TX. If the LED glows all that you would need to do is touch up the trimmers on main board 3 nos in RX for best signal and on TX final board for maximum signal in TX.

A word of caution do it along with few other friends so there is none to pass the buck later on.

Check out and do let me know many sets may not even need the touch up tuning.

73

Rahul VU3WJM

PS: I will be coming shortly but if any help needed before then feel free to drop a line rather than fiddle upon.

Dear Rahul VU3WJM

Thanks for replying about Green Bird. Also for
technical info.

I was looking for Green Bird Purchase & Sales Details
from NLF & VU2AUA. No replies yet. Nor from any of
the committee members.

Anyways hope to know more from AGM.

Regards

Jaiprakash VU2JPN

2688. Italy's Red Cross says "YES" to Ham Radio

Yahoo group: m_a_r_s
Date: 2005-09-02 09:11:54 UTC
From: dinesh patel
Topic: 2663 Message: 2688

Dear Mars Members

Just Thinlk on Red cross's Usage of Ham Bands! (Original mail is represanted below)

If no one opposes perhaps lot many humanitarian organisations may try to slip into Ham Bands.

Red Cross is known world over for their humanitarian services, why the UN and ITU is not allowing a separate frequency for their use??

If you agree you may write/communicate to ARSI tha national body, the IARU, the WPC etc.

As long as they operate only during emergency wherein they are deprived of normal communication means they may use ham bands as hamsbut they must not replace their communication tools by Ham Radio.

I hope I am correct in view to protect the ham bands.

Radio Patel

>The Red Cross in Italy is turning to ham radio as an official
>communications channel.
>
>The Italian Red Cross will activate its first ever amateur radio station in
>October under the callsign IZ4GQA. The pioneering new station is the
>brainchild of the radio communications department of the Italian Red
>Cross's Emilia Romagna region.
>
>The department had been looking for a communication tool that would provide
>wider coverage than existing radio networks, incur no fees and be capable
>of working in crisis and emergency situations.
>
>An amateur radio station appeared to be the perfect solution, but at the
>time the Italian Red Cross had never before been authorised to operate such
>a station. Not to be put off, members of the radio communications
>department obtained a copy of the official Italian amateur radio
>regulations and submitted a seven-page application for a licence to the
>Italian ministry of communications.
>
>The application was successful and the Italian Red Cross was given the
>green light to operate an amateur radio station. An Italian Red Cross
>spokesman said: "Now we can communicate on all ham bands, being able to
>connect Red Cross stations not only in our region, not only in Italy, but

2690. Mumbai rains

Yahoo group: m_a_r_s
Date: 2005-09-03 00:39:14 UTC
From: sarla sharma
Topic: 2690 Message: 2690

Hello,
I wish to highlight the service rendered by Ham radio operators during the mumbai rain and flood situation, in the next issue of "Ham radio news" due this month. Please send me your reports with pictures if possible, at least your mugshots, by the 10th of this month.
In addition, please let me know the plans for Ganpathi Visarjan, which needs to be published in the "Club News" column.

2691. green birds

Yahoo group: m_a_r_s
Date: 2005-09-03 06:39:04 UTC
From: arun singh rawat
Topic: 2691 Message: 2691

hi, everybody
there is to much QRM for green birds. as per green bird status at avihja bldg is, there is 12 nos lying in non working stage .

I would request nilesh (vu2nlf) to give me

1) details of green pruchase.
2) list of person who has given him rs 2000/- for purchase.
3) list of repaired green bird issued to.

I would request all the people to mail on the groups (not personal mail or call)

I) people given rs 2000/- for green bird to nlf .
2) people recived green bird from nlf.

please respond to the mail, but donot create QRM

I would be thankfull if somebody comes and help in getting the green bird working.(rahul will be there when he is in mumbai)

we are trying to sought out this, as clearance of this will leave lot of space in avijha bldg .

bye
write u soon in other mail after you response

ArunSingh

I have paid Rs 4000/- to NLF for 2 green birds ..Kinldy let me know when are you getting the bird actually flying ..i do understand that there is lot of QRM for green bird ..but no reply from either you and NLF make people think otherwise..so better you reply and make things clear.. as u did now..so henceforth even you are QRL with your work please take some time and answer so as to clear all the doubts

I also know that you are not responsible for the earlier batch of green birds ..but since you had taken money to get the 2nd batch of green birds ...members feels that you are, and on the top no reply form you creates more QRM so please please please reply if not to individually , then in general to all once in a week.

Hi guys,
I do agree with Mr Dinesh Patel. In fact, even if they use it in emergencies, it should be used only by hams only. This is my view. I would like a discussion on this issue.
Also please remember the qrm on 145.000 recently. Fortunately, vu2hit, vu2axn, vu2iia, vu2scq & lot more took pains to throw these ONGC chors out. Also the guys finally listened to OM Vispy VU2VLL & is not heard any more on OUR frequencies. Please unite & be vigilant.

Well will anybody shed light on the goings on? The AGM was scheduled for early Sep but has been delayed. So when is it gonna be held, Oct, Nov ????
No info so far.
And frankly I am fed up after all those promises of giving me the raffle rig.
i feel stupid even talking about it now.

"Patience is a virtue best wasted on thee."

VU2CDP

PS: I finally managed to put up 5/8 outside my window clamped on the grill framework. Signal is a lot better as compared to the rubber ducky. Worked OM Sreeni, VU2PDN on simplex at 1W. 5-9. Effort worth it as it took almost 2 hrs fixing the ant. Quite an arduous task putting it up outside the small grill with one arm going completely numb from holding the antenna for that long.

Click here to donate to the Hurricane Katrina relief effort.

Dear Members,
This is to inform your that we have scheduled a meeting on this Sunday, the 11th of September 2005.

The main agenda for the meeting is " Ganpati Visarjan 2005" and related issues.

1)It is compulsory to attend the meeting for all the members who's names appear in the final list attached with this mail .. Members failing to attend this meeting will not be counted in the event.

2) Photographs : Please bring in two passport size photographs for the ID cards which will be issued for the event.

3) Confirmation of the availablity of the equipment: Please confirm the availablity of your equipment for the event. After confirming the availablity of personal equipment for the event, one is bound to bring the equipment on the day of event, failing to do so one may be barred from participating in the event.

The time and the venue for the meeting will be notified in a day or two.

Members are requested to pass on this info to their ham freinds who do not have access to the internet.

De

2724. Visarjan Update

Yahoo group: m_a_r_s
Date: 2005-09-16 08:30:07 UTC
From: Huzefa Merchant VU2HIT
Topic: 2724 Message: 2724
Attachments: 1 described; binary payloads are missing from this source WARC

Hi Friends

After lacklustre start for the preparation of the events by the people organising the event every year...the mantle was taken by us with the MC permmissions to do the preparations for visarjan and the mail was sent asking members for participation...and as expected we had overwhelming response for members and unlike last year this year we had more licensed Hams so it was difficult to adjust all, as the requirements was of 20 and we have accomodated 30.

The final list of Members who will be at the respective locations is attached with this mail...PLEASE NO REQUEST FOR CHANGE IN LOCATION AS THIS IS FINAL AND WILL NOT BE ENTERTAINED

All Members participating are requested to report at PizzaHut, Chowpatty by 12.00pm Sharp, all your documents. ID, Banners, Ponchos will given to you at this location.

Also please Carry your Rainwear's as the Rain Gods are in a QRM moods so to avoid last minute QRM at Location please make necessary precautions as highlighted by VU2AXN Ankur mails and also please go thru the check list provided so as to avoid last minute hassle.

I hope we will all make this events a grand success and continue the legacy of the society which we had been doing every year.

Hi,

Best Wishes to all Mumbai Ham participants of G.V
2005. Looking forward for a huge huge succesful event.

Would be eager to read the report after the event.

Meanwhile also pray to "ganpati bappa" to take care of
Mumbai city & keep it "disaster-free".

Greetings from all Bangalore Hams also for the event.

2727. FACT SHEET ROLE OF HAMS DURING GANESH VISARJAN

Yahoo group: m_a_r_s
Date: 2005-09-17 01:24:33 UTC
From: ULHAS
Topic: 2727 Message: 2727

With heartfelt thanks to VU2UGO OM Sandip Adiwarekar &
VU2NHR OM Nirav Sanghavi

ROLE OF HAMS DURING GANESH VISARJAN

Hams from Mumbai have been providing FREE and
VOLUNTARY wireless radio services for Ganesh Visarjan
at Giragaum Chowpatty for more than 16-18 hours for
last 12 years. The same is being continued under the
banner of MARS
since its inception 6 years ago. All large Ganpati
idols from as far as Chembur come to Girgaum Chowpatty
for immersion due to the crane and other crowd
handling facilities available there. The wireless
radio support is provided to and for the following -

1. Lost and Found cases to the Police - Hams from
various BMC towers (machaans) relay information about
numerous cases of lost and found people and their
description and the PA systems make these
announcements in Chowpatty, Opera House, Prarthna
Samaj and C.P. Tank. All found people and those
looking for them are sent to the Lost and Found Area
of the Mumbai
Police on Girgaum Chowpatty.

2. Wireless support for the Samanvay Samiti
We provide wireless support for the smooth movement of
Ganpatis and accompanying crowds and messaging for the
Samanvay Samiti which is an association of all the of
Ganesh Mandals in Mumbai, General Public at large
through BMC public address systems.

3. Emergency medical services, ambulances of various
hospitals and first aid counters are all given
wireless support for cases that occur and ambulances
and first aid counters are intimated about cases
coming to them. This helps them prepare better and
react faster in critical and emergency situations.

4. Life Guard Tower and boats have our volunteers on
them and they have no way of communicating with each
other without our radio hams. The life guard boats
watch the crowds from the sea and come to rescue of
drowning people.

5. Backup for Mumbai Police : Other than the Mumbai Police, none of the agencies involved in smooth Ganesh Visarjan co-ordination have wireless equipment. We not only provide the support by offering these agencies free communication but also do the same for those policemen on the street level who do not have wireless sets when they want to communicate to Ganesh Mandals etc in other locations thereby relaying information using our wireless network.

MARS is a not-for-profit society and spends its own money in erecting its tower at Chowpatty and providing refreshments and basic supplies to its volunteers. MARS
is looking for nominal sponsorships for these requirements on a long term basis. MARS has all the necessary approvals from the relevant authorities to voluntarily conduct these activities and is invited to meetings of the Mumbai police and other agencies.

Mumbai Amateur Radio Society also provided communication support during natural calamities like Gujarat earthquake and Bihar flash flood.

WHAT IS AMATEUR RADIO AND WHO ARE HAMS?

A user of a personal radio station, purely for non-commercial purposes, with other radio hobbyists. We call that Ham Radio or Amateur Radio. We call ourselves Amateur Radio Operators, Ham Radio Operators or just plain "hams".

Ham radio operators communicate with each other with regular voice mode or via computers and ham radio. Hams may become close friends with people they talk to on the other side of the globe. Some of us prefer to use the oldest form of radio communication - Morse code. If you fancy today's technology,there are various ways to connect your Amateur Radio Equipment to your computer and operate using digital modes such as Packet Radio, RTTY (Radio Tele-type), PSK31, SSTV (Slow Scan Television) or HSMM (High-Speed Multimedia).

Some may take a bagful of electronics and turn it in a radio. Hams have communicated with each other and their homes, during a hike in the Sahyadris with just 3 watts of power. The skills are honed continuously using games
like a Foxhunt or decoding cloud images from the weather satellites or doing a moonbounce. One can enjoy a talk via the amateur satellites (like HAMSAT - India's very own satellite) or a with an astronaut

aboard the International Space Station, all of whom are hams by default.

It is during natural calamities that we hams come in our own. While all other communications channels are down, hams provide emergency communications by giving own time, spending own money, trying to help out when and where needs it most. The country asks and we respond without reservation. Many a times this is the only channel available for keeping the communications alive. This is where the hobby becomes of prime importance.

To become a ham, you have to have a license issued by the Wireless Protocol Commission, Ministry of Telecommunications. The examinations are held by the WPC all over India. The WPC also provides each ham with a callsign, which identifies each ham all over the world uniquely. The WPC also monitors the Amateur Radio bands which are allocated globally for amateur radio use by International Telecommunication Union.

Amateur Radio knows no country boundaries and brings the world together as good friends. We believe in "ONE WORLD! ONE LANGUAGE!HAM RADIO"

Hello saurabh,
These instructions are for people who have not received any info on their licences since 5 years. It is anyway good to confirm with Mr.Irshad whether your papers are processed or not.

On behalf of the Managing Committee,
I take great pleasure and pride in complimenting each and every member of MARS who took time off and maintained one of the numerous observation posts we had set up.
The list of participants is exhaustive and keeps the MARS banner flying high.

Special mention of VU2HIT,VU2ZRS and VU2AXN (yes,in decreasing order of their age) who ran the whole set up.

Looking forward to more such events int he future.

Dear Friends
Ref to my earlier mail till now i have only 3 mails
& order for 3 rigs which is very less for production
I think uptil now only one member has clearly understood
my mail i.e. KAPIL CHANDNI & thanks kapil for ur suggestion
infact we have the same idea to get it done outside & we do
the most critical part which is tuning but even for this we
require a min order of 10- 15 pieces otherwise we cannot go ahead
cause the cost of production would increase so also we have to get
the DDS chip from US we also need to design the PCB for the same
as our personal rig is concerned we can manage ourselves but
if we are manufacturing this & making this commercially we have
to adhere to certain norms & we dont want to compromise on the
quality & let me tell you all that we are doing this so that more
hams from mumbai can come on HF cause every time hams tell
commercial rigs are out of budget for them ,thats why we
have kept the price at the lowest considering the efforts
required.
Let me also inform you that even if we get the desired orders
we would require atleast 4-6 weeks to design the prototype with
PCB , CABINET etc.

THANKS & 73

WAVECOM Elektronik AG, Hammerstrasse 8, CH-8180 Buelach, Switzerland
Phone: +41 44 872 70 60 , Fax +41 44 872 70 66, info@...

W51PC

The PCI bus, more calculating power, bigger bandwidth, multiple cards per PC and more flexible in- and outputs make this decoder card the first choice for setting up complex monitoring and surveillance systems. The W51PC uses the same Windows? based user interface as the W41PC MK-II.

The full support of Windows? 2000/XP operating systems lets the W51PC easily communicate with other applications. Real DSP technology is combined with today's high PC power.

General Description
Special Functions
Applications

General Description

The W51PC card offers all the necessary functions to analyze, decode, record and process radio communication transmissions. The complete hardware is realized on a half-length PCI card.
The W51PC can be used in different ways:

local ? use in your own PC with the standard W51PC application software
remote ? use over the LAN, with the standard W51PC application software
remote control ? control from other applications using customer written or third party software (example Alarm Monitor)

This allows the system to be adapted to the clients? needs and applications.

Using an audio or IF signal, the W51PC decodes a variety of text and graphical transmission modes. The detection of signal parameters is assisted by a large number of analysis and measurement functions that operate over a wide range. The W51PC is the next advanced version of the famous line of WAVECOM decoders. It gives more flexibility, calculating power to do the required. Two additional audio outputs are now available.

No interrupt is required.

Special Functions

New:

To analyze, demodulate and detect signals a new wideband FFT with a bandwidth of 192 kHz was added.
All inputs are on a separate piggy pack module, for more flexibility and special requirements.
IF-inputs, the best connection to your receiver.

To decode and analyze signal transmissions the W51PC is equipped with two Digital Signal Processors (DSP?s). The DSP's with their power and efficiency allow the realization of real-time demodulators. The large memory allows a sufficient data buffering, allowing you to run multiple cards on the same computer. Another part of the W51PC application runs on the PC, making the whole computing power of the PC available for the data processing.

The W51PC application software can utilize DCOM to communicate with the W51PC hardware over the network. Up to eight W51PC cards can be plugged into a single PC, providing basis for a high performance signal decoding system. This combined with the network capabilities allows a system to be extended for many possible configurations. Complex systems for massive data handling are only limited by the performance of the used computers and the network.

Operation over a network is completely transparent to the user. Configuration of system components can be completely adapted to particular needs. A W51PC card can be controlled from everywhere and its output can be sent to one or more applications on the network.

Any PC can be set up as a management console to control a whole network. Any PC can be used to remote control W51PC cards (decoding, storing, hard disk recording, analyzing etc). To realize such configurations high performance networks are recommended.

The W51PC application is a full 32-bit Microsoft? Windows? application providing a familiar user interface and system functions. This has the advantage of automatically supporting graphics adaptors, printers and other functions that are supported by the operating system. Multi-window display capabilities make it possible to view different signals or to compare different analysis representations of a single signal simultaneously. The availability of sophisticated software development tools allows the rapid implementation of new functions.

To process data output, control the hardware and the mode parameters of the W51PC, a software interface (DCOM) is implemented. It allows the direct integration of the W51PC into customer applications.

The easy-to-use man-machine interface with clearly structured pull-down menus allows an operator to become familiar with the W51PC in a short time. A high degree of operator proficiency can quickly be achieved.

All of the integrated analysis tools contain different measuring methods and viewing options. It helps you to examine the important signal parameters in detail. The W51PC reaches a unique precision and operates with highest resolutions. It is easy to make exact measurements using adjustable cursors with associated numerical displays. Dynamic zoom functions allow magnification of details in any selected window. Scroll buffering makes it possible to move back and forward within signal history.

Real-time FFT functions with a fast display refresh rate are realized with high speed Motorola? DSP?s. Additional functions provide powerful tools especially suitable for analyzing unknown signals.

A wide range of default system settings can be configured. Some examples are, input signal level, sampling rate, measuring interval, centre frequency and demodulator. Additionally a variety of international alphabets can be selected.

More than 110 modes are currently implemented. A variety of different alphabets are included in the standard package.

We can deliver to authorized official bodies:

Additional modes
Software source code and the complete development environment.
This allows the customer to realize own decoding modes or to adapt the user interface to specific requirements.

Product development is an ongoing process, and additional modes and functions are continually being added.

Applications

Typical fields of application for the W51PC card include:

manual or automated monitoring of radio communication transmissions in the HF and VHF/UHF/SHF (satellite) bands
signal intelligence
signal analysis and classification

Within official bodies and telecommunication authorities the range of applications is from stationary monitoring of one transmission with a single system to fully automated broadband monitoring with a network of cooperating systems. The frequency range covers a spectrum from the audio frequencies up to microwaves.

The fully documented DCOM based remote control interface makes integration into almost every user environment very easy. This could be the direct decoding of a single, fixed frequency transmission or the overall signal analysis of a complete pager network.

Automatic mode recognition of FSK modes makes completely autonomous operation possible. Decoded data can be routed to be processed by user applications running on the same or another computer in the network. The Alarm-Monitor included with the W51PC, is an example of such an application. It will play a sound or sends a pager message if it detects some preset words in the received text. With such applications the data output of the W51PC can also be used to control receivers, recording equipment or be fed into complex data analysis tools for post processing.

Another tool included with the W51PC is the SAT C Monitor. This tool will save, sort and restore the data received from a SAT C channel.

Time stamps generated by the system are automatically added to every line of the data to ensure precise backtracking of any signal.

=========

Decoding INMARSAT with the W51PC/LAN
For INMARSAT monitoring, the customer can use our W51PC card together with a satellite antenna a receiver or down converter. In the professional version, all our INMARSAT modes are included.

INMARSAT A

With the SAT-A mode, the forward channel (TDM telex traffic) can be monitored.INMARSAT B

With the SAT-B mode, data, fax and digital voice traffic can be monitored.
In our next release, demodulation and decoding of digital voice will also be supported.
L-Band only, forward channel monitoring (does not require a large C-Band antenna) is supported.INMARSAT C (TDM, TDMA) With the SAT-C-TDM and SAT-C-TDMA mode, data traffic going in both directions can be monitored.INMARSAT M

M spectrum
With the SAT-M mode, data and fax traffic can be monitored.
L-Band only, forward channel monitoring (does not require a large C-Band antenna) is supported.INMARSAT mM

mM spectrum
With the SAT-mM mode, data and fax traffic can be monitored.
L-Band only, forward channel monitoring (does not require a large C-Band antenna) is supported.Single Channel Monitoring System

Fax session
The W51SAT monitors the control channel, and upon initiation of a new session with a Mobile Terminal, automatically switches to the assigned Traffic Channel for monitoring. To limit the volume of monitored traffic, a watch list may be created containing target MES IDs. Monitored fax, Tel and data sessions are stored in files. A fax viewer is included in the

software.Multi Channel Monitoring System To monitor multiple INMARSAT B, M or mM channels with more then one card, an external, customer specific control software using remote control is required. Many customer write own their own software optimized for the special requirements. On request WAVECOM can provide also such additional control software.Near Field Monitoring System To monitor multiple INMARSAT B, M or mM terminals that are in you very close neighborhood, a specialized setup of the Single Channel Monitoring System is required.

GSM Monitoring
The A5.0, A5.1 & A5.2 passive GSM Monitoring systems are strictly limited to government authorities and their authorized suppliers.
No technical data are published on this web page due to the sensitive nature of this product.
The sale of this product is controlled via end-user certificate.
Contact WAVECOM for information, technical data and arrangement for demonstrations.

Calling All Radio Amateurs

Credits: SSETI Team - S. Tietz.
Paris, France (ESA) Sep 14, 2005
Radio amateurs worldwide are being asked to help collect data from the student-built SSETI Express satellite, due to be placed in orbit on 27 September. To encourage them, ESA's Education department has organised two competitions and is supplying free downloadable software.
"We will be happy to receive all the help we can, particularly during the early operations phase," says SSETI Express Project Manager, Neil Melville. "If a radio amateur receives a signal from SSETI Express before we do then the main ground station in Aalborg, Sweden will be delighted to hear from them."

Radio amateurs wherever they live are being asked to help with the downlink of housekeeping and payload data. In return, the SSETI Express UHF and S-Band communications systems will be made freely available to the radio amateur community, along with the mission data downlink, once the main mission objectives of SSETI Express are complete.

SSETI Express will downlink telemetry in AX25 format at 9k6 on 437.250MHz and at 38k4 on 2401.835MHz. It will also be available for radio amateurs to use as a single channel FM transponder. The software needed to downlink data and to submit telemetry to the SSETI Express Mission Control can be downloaded free from the Radio Amateur Connection pages on the SSETI Express Mission site. Submissions will be automatically recorded and published on the site.

Radio amateur competitions

Once radio amateurs have the software needed it will be up to them to demonstrate that the amateur radio ground station 'network' is a valuable resource for satellite projects. To provide extra motivation, ESA has organised two competitions.

The winner of the first will be whoever submits the largest number of valid telemetry payload packets to SSETI Express Mission Control by 00:00 of 1 January 2006.

The prize is an invitation to the three-day STEC06 (Student Technology Education Conference) conference and exhibition, to be held in Germany in spring 2006, as well as a private visit and tour of ESA's Spacecraft Operations Centre (ESOC) near Darmstadt.

A unique "I heard it first" SSETI Express T-shirt is the prize for the second competition. This will be sent to the first person to receive, decode and submit a transmission from the spacecraft to SSETI Express Mission Control. All information on equipment needed, software available and where to send data can be found on the Radio Amateur Connection pages of the student SSETI Express Mission site.

SSETI Express sub-systems for radio amateurs

Of the 12 sub-systems on SSETI Express, two involve radio amateurs. The ultra high frequency unit (UHF) has been designed and built by a radio amateur in Hohhenbrunn, Germany. It contains a radio and terminal node controller, and is the spacecraft's primary communications system. It will provide uplink of telecommands from the ground station, audio uplink from amateur radio users and downlink of mission data at 9600 bps, all via a top-mounted rigid monopole antenna.

Radio amateurs from AMSAT-UK, although no longer students, are also involved in the project as they developed the S-Band TX, microwave radio communications transmitter. This provides both high-speed mission data downlink at 38400 bps and in combination with the UHF system, a single-channel audio transponder.

Graham Shirville (call sign G3VZV) is coordinating the team of radio amateurs from AMSAT-UK, the club for users of amateur radio satellites. "I'm involved in frequency coordination of spacecraft using the amateur satellite service. In early 2004 a group of us from AMSAT, UK were asked if we wanted to help with the project. The answer was 'yes' and we protoyped the S-Band TX within eight weeks."

"It has been a real challenge and not always easy," he says "particularly when some of the hardware we built did not perform 100% - we felt we were letting everyone else down. But we have learnt an amazing amount of skills and knowledge which we hope to invest in future space projects."

Shirville will be present at the launch, a nail-biting moment for all the team. "I will be elated if we hear the radio signals but sad and worried if we don't ". He hastily adds that he is not expecting failure. "The SSETI Express students are bright, enthusiastic and determined to succeed; they have also put an incredible amount of time and effort into this project. Now it is up to the radio amateur community to do our bit to help them.

Over to you fellow amateurs and 73 from G3VZV."

2758. How many list members does it take to change a light bulb?

Yahoo group: m_a_r_s
Date: 2005-09-27 04:55:50 UTC
From: Nirav
Topic: 2758 Message: 2758

One to change the light bulb and to post that the light bulb has been changed.

Fourteen to share similar experiences of changing light bulbs and how the light bulb could have been changed differently.

Seven to caution about the dangers of changing light bulbs.

Seven more to point out spelling/grammar errors in posts about changing light bulbs.

Five to flame the spell checkers.

Three to correct spelling/grammar flames.

Six to argue over whether it's "lightbulb" or "light bulb" ... another six to condemn those six as stupid.

Fifteen to claim experience in the lighting industry and give the correct spelling.

Nineteen to post that this group is not about light bulbs and to please take this discussion to a lightbulb (or light bulb) forum.

Eleven to defend the posting to the group saying that we all use light bulbs and therefore the posts are relevant to this group.

Thirty six to debate which method of changing light bulbs is superior, where to buy the best light bulbs, what brand of light bulbs work best for this technique and what brands are faulty.

Seven to post URLs where one can see examples of different light bulbs.

Four to post that the URLs were posted incorrectly and then post the corrected URL.

Three to post about links they found from the URLs that are relevant to this group which makes light bulbs relevant to this group.

Thirteen to link all posts to date, quote them in their entirety including

all headers and signatures, and add "Me too"

Five to post to the group that they will no longer post because they cannot
handle the light bulb controversy.

Four to say "didn't we go through this already a short time ago?"

Thirteen to say "do a Google search on light bulbs before posting questions
about light bulbs"

Three to tell a funny story about their cat and a light bulb.

AND

One group lurker to respond to the original post 6 months from now and start
it all over again.

You've subscribed from a Yahoo India account, and the group is a yahoo US
group.

The problem should therefore be internal to Yahoo, since something's gone wrong
with the inter-server mail exchanges.

2763. Smoke alarm for your shake at discount

Yahoo group: m_a_r_s
Date: 2005-09-28 05:49:41 UTC
From: dinesh patel
Topic: 2750 Message: 2763

Dear Mars Members

I have a unused ceasefire smoke alarm in fully working condition for sale(with original box).
It is in round in shape and works on 9 volt battery.

The retail price of unit as disclosed by the company in maharashtra is Rs.2,400/-.

I shall give the same to any MARS member for Rs.1,600/-. I can arrrenge the home delivery at any where in mumbai at the cost of buyer. Buyer member can test the same and pickit up from my residense.

Remember this price is for MARS members only.

The weblink of the company for the smoke detectors is as follows

http://www.ceasefireindustries.com/products_smoke_p.shtml

The smoke detector model with me is Ceasefire CFR-SA-IC

Mail me if any body has any question

Dinesh Patel

To the moderator(s) of this e group:
I was given to understand that this group is specifically for the activities of the Mumbai Amateur Radio society and other radio related matters. There fore I am wondering about this ceasfire product being offered for sale at this site.
If the motive of this egroup has changed, then of course I have no complaints and will unsuscribe. If not, then please confine all mails to matters of the society and radio.
Thanks,
Sarla

Sent: Thursday, September 29, 2005 10:45 PM
Subject: [tara1] A new radio..!!!!!!!!!

Highlights
Introducing a groundbreaking transceiver with amazing features thanks to the new revolutionary Hybris-II processor.
Digital voice mode. Explore a new world of digital contacts. Signal quality, PTT and audio input/output jacks are available for those who wish to use this unit as a digital repeater component. This is also why we've ensured a 100% duty cycle at 10 and 300 mW.

262K color TFT for advanced functions. A smaller monochrome LCD for basic use. The TFT can be switched off at any time to save battery power.

Built-in TNC with all APRS functions found in Kenwood TH-D7E plus downloadable maps for live tracking on the TFT. DX-cluster monitoring function. The TNC can also be used for access to your favourite BBS when hooked up to a computer. Built-in 12 channel GPS receiver with a knob-like antenna on top.

SimulPlot, a new protocol with subaudible tones that transmit position data simultaneously with speech to compatible units for easier tracking. Received data is plotted on the same maps used by APRS..

Built-in 3 megapixel camera with auto focus. Store and/or transmit pictures via SSTV protocols. Supported protocols are Robot 36, Martin M1/M2 and Scotty S1/S2 (firmware upgradeable). Receive and display pictures on the TFT. Built-in 128 MB RAM memory storage, expandable with Mini-SD memory card.

"Pop-up" photo lamp/flashlight for those darker moments (a white 80000mcd LED)

RDS decoder when tuning the 88-108 MHz broadcast band.

Bluetooth v2.0 module for periferal connectivity. Download maps for the APRS-function. Upload your pictures to a PC. Program memory contents and settings from a PC. Connect to headset for hands-free access and more. Long range, up to 100m.

Built-in barometer and lightning detector modules. Ideal for hiking. The barometer can display a 24hr history diagram. An altimeter function is also implemented. The lightning detector displays the relative signal strength of a thunderstorm along with a history diagram. An audible alarm will warn the user of approaching hazardous weather.

CTCSS, DCS, DTMF, 5/7/11-tone CCIR systems (both RX & TX) and 1750 Hz tone burst for repeater access

Full tone scan/search should please any scanner enthusiast.

InstaTune. When in scanner mode, it locks the receiver to nearby transmissions. Ideal when searching for unknown signals. Other manufacturers call this "Close call" or "Reaction tune".

Built-in ferrite-bar for LW/MW reception.

Built-in Iambic keyer. Fully programmable, can also act as a beacon.

AF and RF spectrum scope.

24hr clock.

Extra low power output of 10mW. Ideal for very local QSO's or the more challenging DX's with highly directional antennas.

True dual band receive.

Type: Amateur VHF/UHF transceiver
Frequency range: TX: 144-146 / 430-440 / 1240-1300 MHz (Europe)
RX: 0.1-2600 MHz
(50 Hz-100 KHz steps)
Mode: TX: SSB/CW/FM/NFM/Digital voice (GMSK, 4.8 kbps)
RX: SSB/CW/AM/FM/NFM/WFM/Digital voice(GMSK, 4.8 kbps)
RF Power output: 2m: 10 mW / 300 mW / 1 W / 5W
70cm: 10 mW / 300 mW / 1 W / 5W
23cm: 10 mW / 300 mW / 500 mW / 1 W
(100% duty cycle at 10 & 300 mW, overheat protection on higher levels)
Sensitivity: N/A
Selectivity: N/A
Image rejection: Better than 60 dB
Voltage: 7.4 VDC (Lithium-Ion battery, 2000 mAh) or 6-16 VDC external
Current drain: RX: 10-350 mA (depending on active functions)
TX: Max 2 A
Impedance: 50 ohms, SMA
Dimensions (W*H*D): 60*150*38 mm
Weight: 350 gr
Manufactured: -
Other: 2000 dynamically allocated memories with alpha
tags (QRG plus 20 characters). 1200/9600bd TNC.
Waterproof/submersible. Twin RX

Subject: [tara1] A new radio..!!!!!!!!!

HighlightsIntroducing a groundbreaking transceiver with amazing features thanks to the new revolutionary Hybris-II processor.
Digital voice mode. Explore a new world of digital contacts. Signal quality, PTT and audio input/output jacks are available for those who wish to use this unit as a digital repeater component. This is also why we've ensured a 100% duty cycle at 10 and 300 mW.
262K color TFT for advanced functions. A smaller monochrome LCD for basic use. The TFT can be switched off at any time to save battery power.
Built-in TNC with all APRS functions found in Kenwood TH-D7E plus downloadable maps for live tracking on the TFT. DX-cluster monitoring function. The TNC can also be used for access to your favourite BBS when hooked up to a computer. Built-in 12 channel GPS receiver with a knob-like antenna on top.
SimulPlot, a new protocol with subaudible tones that transmit position data simultaneously with speech to compatible units for easier tracking. Received data is plotted on the same maps used by APRS..
Built-in 3 megapixel camera with auto focus. Store and/or transmit pictures via SSTV protocols. Supported protocols are Robot 36, Martin M1/M2 and Scotty S1/S2 (firmware upgradeable). Receive and display pictures on the TFT. Built-in 128 MB RAM memory storage, expandable with Mini-SD memory card.
?Pop-up? photo lamp/flashlight for those darker moments (a white 80000mcd LED)
RDS decoder when tuning the 88-108 MHz broadcast band.
Bluetooth v2.0 module for periferal connectivity. Download maps for the APRS-function. Upload your pictures to a PC. Program memory contents and settings from a PC. Connect to headset for hands-free access and more. Long range, up to 100m.
Built-in barometer and lightning detector modules. Ideal for hiking. The barometer can display a 24hr history diagram. An altimeter function is also implemented. The lightning detector displays the relative signal strength of a thunderstorm along with a history diagram. An audible alarm will warn the user of approaching hazardous weather.
CTCSS, DCS, DTMF, 5/7/11-tone CCIR systems (both RX & TX) and 1750 Hz tone burst for repeater access
Full tone scan/search should please any scanner enthusiast.
InstaTune. When in scanner mode, it locks the receiver to nearby transmissions. Ideal when searching for unknown signals. Other manufacturers call this "Close call" or "Reaction tune".
Built-in ferrite-bar for LW/MW reception.
Built-in Iambic keyer. Fully programmable, can also act as a beacon.
AF and RF spectrum scope.
24hr clock.

Extra low power output of 10mW. Ideal for very local QSO?s or the more challenging DX?s with highly directional antennas.
True dual band receive.

Type:Amateur VHF/UHF transceiverFrequency range:TX: 144-146 / 430-440 / 1240-1300 MHz (Europe)
RX: 0.1-2600 MHz
(50 Hz-100 KHz steps)Mode:TX: SSB/CW/FM/NFM/Digital voice (GMSK, 4.8 kbps)
RX: SSB/CW/AM/FM/NFM/WFM/Digital voice(GMSK, 4.8 kbps)RF Power output:2m: 10 mW / 300 mW / 1 W / 5W
70cm: 10 mW / 300 mW / 1 W / 5W
23cm: 10 mW / 300 mW / 500 mW / 1 W
(100% duty cycle at 10 & 300 mW, overheat protection on higher levels)Sensitivity:N/ASelectivity:N/AImage rejection:Better than 60 dBVoltage:7.4 VDC (Lithium-Ion battery, 2000 mAh) or 6-16 VDC externalCurrent drain:RX: 10-350 mA (depending on active functions)
TX: Max 2 AImpedance:50 ohms, SMADimensions (W*H*D):60*150*38 mmWeight:350 grManufactured:-Other:2000 dynamically allocated memories with alpha tags (QRG plus 20 characters). 1200/9600bd TNC.

Hello,
The handie pictured in my earlier mail does not exist at all, at least till date !!
A BIG disappointment !!
It was wishful thinking on the part of SM0OFE !! He probably used some photo software to spice up Yaesu VX 7R.
But I am sure very soon that too could be a reality !!! I sure am waiting for that!!

Please observe the following rules while posting
mails on MARS e-groups.

* In replies, do not quote all of the original post.
Quote only those phrases you are responding to, and
keep the quotes as brief as possible.

* If you're on digest mode, be sure to change the
subject heading when you reply to a post. Do not quote
an entire digest in a list reply. Do check this before
you send your reply.

* Do not forward virus warnings, chain email, notices,
or other such material .

* If you reply to a posting, your message goes by
default to the whole list, not just to the
originator.If the reply is only of interest to
the originator or is personal, use private e-mail
instead.Personal communication should be conducted
privately.

* If you don't see your posting immediately, don't
assume it failed and try to repost it at once.If you
post again, you will have multiple copies of the mail.

* Observe rules of Netiquette.

2783. SSETI Express launch date reset.

Yahoo group: m_a_r_s
Date: 2005-10-05 10:48:01 UTC
From: HVK
Topic: 2783 Message: 2783

The launch of the Student Space Exploration and Technology Initiative (SSETI) Express satellite, which will carry an Amateur Radio package, has been rescheduled for later this month. "We have been advised that a new launch date has been agreed--Thursday 27 October from the Plesetsk Cosmodrome--with 28 October as a back-up date," said Graham Shirville, G3VZV, who adds that the launch time is expected to remain at 0652:26 UTC.

The SSETI Express, which carries three CubeSat picosatellites, will leave Earth from Plesetsk Cosmodrome via a Cosmos-3M LV vehicle. Plans call for downlinking AX.25 telemetry at 9k6 bps on 437.250 MHz and at 38k4 bps on 2401.835MHz. The satellite will be turned into a single-channel amateur FM voice mode U/S transponder after the transmitter serves initial telemetry duty.

The AMSAT-UK and AMSAT-NA Web sites provide additional information on this project, including how to obtain the SSETI Express Radio Amateur Handbook by Richard Limebear G3RWL, published by AMSAT-UK. Available for downloading in either English or French, the 22-page document provides background information on the project and explains how radio amateurs can use the spacecraft and its three CubeSat passengers.

http://www.uk.amsat.org/

See the SSETI web site at http://sseti.gte.tuwien.ac.at/WSW4/MOPWS/news.php for up to date information and pictures of the launch of SSETI. The reports include input from AMSAT-UK committee member Graham Shirville, G3VZV, who is a member of the launch campaign team currently in Plesetsk.

2784. National SOS Radio Network : "USA"

Yahoo group: m_a_r_s
Date: 2005-10-06 08:29:52 UTC
From: Huzefa Merchant VU2HIT
Topic: 2784 Message: 2784

"National SOS Radio Network" ready to start, based on millions of FRS "Family Radio Service" radios already in use plus 675,000 ham radio operators across America.

"National SOS Radio Network" provides instant, reliable, emergency communications for everyone. Designed to eliminate communication breakdown as occurred in the aftermath of Hurricane Katrina. Ready to go into operation immediately across America.

In the aftermath of Hurricane Katrina, it's become clear that a major contributing factor to the tragic loss of life was the near total breakdown of communication systems. Once electricity, telephone, and cell phone services failed, people were unable to let rescuers know of their dire situations -- and died as a result.

What could be a simple, instant, and virtually zero-cost solution?

"Establish a National SOS Radio Network (www.NationalSOS.com)," says Eric Knight, CEO of UP Aerospace, Inc. (www.upaerospace.com). "There are millions of 'Family Radio Service' or 'FRS' radios already in use by the public for camping, boating, and hiking, and there are 675,000 licensed ham radio operators in America -- people renown and prepared for emergency communications. The output frequencies of FRS radios are easily received by the radio gear ham radio operators use daily. That's the magic link in this emergency communication strategy."

Dear Ulhas VU2UBP

That reminder mail was autogenerated by m_a_r_s egroup, and it will come again on the egroup 1week prior to the event. Remember the reminders autogenerated about AGM before 1st May 2005?

JOTA is always on the 3rd weekend of October every year, so it will be there on 15th & 16th October!

More details about JOTA event like station locations, station-in-charge, list of participants will be posted on the egroup soon.

I request the moderator to take care of all the reminders set in the calendar section of this egroup.

Hi,
I was trying to install Linux on my pc
Config P4, 3ghz, 2gb ram,
2hard disks 250 gb and 150 gb

I got a new book called "linux for non geeks" which
has the software for linux fedora core.
I also have cds for linux 8.

I have windows xp installed on one HD
I need to make it a dual boot with linux on the second
HD.

Both the cds work for installation on a different
computer
But on my machine it gives an error while installing.

I guess some config problem.

If Any one has installed Linux with dual boot please
let me know.
My home Qth is at Byculla.
Thanks,
Aj..

Hi all,
Came across this wonderful writeup which I am sure all of you would also enjoy reading.
_----------

FROM INDIA: RADIO'S FORGOTTEN FRIENDS... SOME THOUGHTS AT 50
by Shubhranshu Choudhary

NOTE FROM THE AUTHOR: No one noticed but our transistor turned 50 today. Shall we say Happy Birth Day ?Taking the debate further which was started by Ershad and Fred...
New Delhi, 18 Oct 2004.Today I want to pay my tributes to that small instrument which made such a huge impact on my life when I was growing up in a small sleepy town in the middle of hills and jungles in Central tribal India.
It was my friend, my teacher, my university,and my window to the rest of the world- my transistor- which completes its journey of 50 years today.
It was the era before the arrival of TV, newspapers took 2 days to reach remote areas, and transistor was the source of information and entertainment.
18th October 1954 when TI-1 was first introduced, as transistor was called at that time; it costed more than $50, quite a huge sum for that period.
It was a revolution for the younger generation in America. Whereas the Radio was part of the installed furniture,controlled by the parents at home , the transistor gave the freedom to choose your favourite programme. It was also when the Rock n Roll arrived. The two clicked together so well- the rebellion of the sixties was reflected in the popularity of these little machines.
Transistor has been on roll since then. Very soon Japanese models took over the first American ones and that remains the rule so far. Prices today for a transistor have come down to less than $1 and has made itself affordable for the poor.
Moving ahead from diode and triode, the technology of transistor was a big step forward. We see its usage even today in TV and computers which uses the transistor technology in various forms.
Many have graduated from transitor to television to broadband & computers now. But for a huge majority transistor remains a trusted ally even after 50 years.
Be it be a rikshaw puller in Delhi or a farmer in remote corner of India, the one thing they have in common apart from being poor is a transistor.
If you leave last couple of decades ours has been a story of transistor radios.

I remember visiting a market called BBC Bazar in Bangladesh. It came by that name in a very interesting way- It was the year 1971, the war of liberation was on and the only transistor in the locality was available in a hamlet in this remote area half a day from capital Dhaka. The whole population converged to listen to the evening news which turned a small hamlet into a full fledged market named after the most popular radio station at that time.
India has 104 million transistor homes, more than double than the reach of TV. And radio transmissions are available to 98.5% of the population.
According to Planning Commission statistics more than half of Indian houses do not have any electricity connection. With these kind of figures does one need to emphasise the importance of transistor for a country like India ?
Ten years back, the Indian supreme court gave an interesting ruling. This judgement strongly critiqued the long-held government monopoly over broadcasting in this country. In early 1995, the court declared the airwaves as public property, to be utilized for promoting public good and ventilating plurality of views, opinions and ideas. (AIR 1995 Supreme Court 1236).
In view of this, the judges said it was essential that the Indian Parliament "steps in soon to fill the void by enacting a law or laws, as the case may be, governing the broadcast media, i.e. both radio and television".
Parliament has stepped in to relax laws to liberate television but many wonder why Governement is so afraid to free Radio.
Radio still remains a powerful tool for the rulers to spread "their" message. But it is still a one way traffic where people have no control on what they listen.
Even our tiny neighbours like Nepal and Sri Lanka have gone forward to legalise community radio stations where people talk to each other rather than being talked at all the time.
It was not surprising that there were no celebrations planned for a technology which has given us so much and contains huge potential to democratise our polity. This probably tells about the time and place we live in.

Point to note are the last two paras which talk about our neighbours Nepal & SL. Its food for thought.

2798. JOTA 2005 Event Briefing

Yahoo group: m_a_r_s
Date: 2005-10-14 05:15:10 UTC
From: Sandip Adiwarekar
Topic: 2798 Message: 2798

What is JOTA?
JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts have met each other through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked communications.

When
JOTA is held the third weekend in October of each year, this year it's 15th - 16th October 2005.

QRV Frequencies :
40 meters 7.035 MHz
20 meters 14.290 MHz
15 meters 21.360 MHz
2 meter 144.400 MHz primary and 145.400 MHz secondary SIMPLEX (no JOTA qsos on repeaters pls)

Station Details
1. Dadar Hindu Colony VU2UBP
Assisted by - VU2HIT, VU2SFH
HF Rig - IC-718 by SFN VHF Rig - IC2100
HF Ant - Dipole by SFN VHF Ant - 5/8 by SFN
HF Coax - RG58 by SFN VHF Coax - RG58 by SFN
HF SMPS Pulse by SFN VHF SMPS Pulse
SWR Meter with Patch Cord - Diwa by HIT

2. Suman Nagar, Chembur VU2JPN
Assisted by - VU3MWH, VU2GBI,
VU2LLM, VU2MIG, VU2OZO
HF Rig - FT840 by SWS VHF Rig - IC2100 by CBU
HF Ant - Dipoles by JPN VHF Ant - 5/8 by JPN
HF Coax - RG58 by JPN VHF Coax - RG58 by JPN
HF SMPS Pulse VHF SMPS Pulse by CBU
SWR Meter with Patch Cord - Diwa

3. Sriram High School, Andheri VU2SXF
Assisted by - VU2IVO, VU2OMV, VU2RZR
HF Rig - FT-840 by ESP VHF Rig - IC2100 by Dixit District - 28149923
HF Ant - Dipoles VHF Ant - 5/8
HF Coax - RG58 VHF Coax - RG58 by Dixit
P/Supply Yaesu VHF SMPS Pulse by Dixit
SWR Meter with Patch Cord - Diwa

4. Shanti Nagar, Meera Road, Thane VU2UGO
Assisted by - VU2RIO, VU3DGB, VU2CDP
HF Rig - TS440 by RIO VHF Rig - IC2100 / FT212
HF Ant - Dipoles VHF Ant - 5/8
HF Coax - RG58 VHF Coax - RG58
HF SMPS Pules VHF SMPS Pulse by SFH
SWR Meter with Patch Cord - Diwa

Miscellaneous
As per the circular received from Maharashtra State Bharat Scouts & Guides (MSBSG) Scouts/Guides, Scouter/Guider has to be in their official dress.

Necessary Help & Food arrangement for HAMs will be made by the MSBSG Co-ordinator.

Name of every Scout/Guide participating in this event will be recorded in a register by MSBSG Co-ordinator and Certificate will be issued to them immediately.

Limited amount of expenses spent on Food / Travel by Station-in-charge during the event will be reimbursed by the Society.

License copy of Temporary Shift of Station will be passed on to the Station-in-Charge as soon as it is received from Delhi.

All the best !!!

Hi

I have following New equipment Box packed for sale

Icom Base station
IC-2100H with std HM-118 mic please refer the link for more details
http://www.universal-radio.com/catalog/fm_txvrs/1256.html

Yaseu
VX-150 VHF Handy 5 Watts please refer the link for more details
http://www.aesham.com/display_pages/vx150.shtml

For more details & price, please you are free to conatct me on 9892 786110 between 10.30am - 5 pm and 7.30 pm to 9.30 pm

This is a story of concept marketing in electrical history. It was a war between a giant and a scientist. While one believed in his own charisma, the other believed in practical usability. The furious race soon ended--but who won the battle?
- Novar & CBS

AC v/s DC ? A tug of war

On October 21, 1879, Edison created his now famous incandescent light bulb, which burned for 40 hours. During 1880, Edison continued work to refine his light bulb. He also began exploring ideas for an equally important invention: a way to generate and transmit the electricity his light bulb would need. A practical and reliable electricity supply was essential if his light bulb was ever to become a practical appliance for homes and businesses.

The first central power plant was commissioned at Pearl Street, which started generating electric power on September 4, 1882. Pearl Street had one generator and it produced power for 800 electric light bulbs. Within 14 months, the Pearl Street station had 508 subscribers and 12,732 bulbs.

With the success of the Pearl Street station, Edison created the Edison Company for Isolated Lighting. This company was formed in May 1883 to build and sell electric power stations, like the Pearl Street station, to towns and cities throughout the United States. It was a new and profitable business.

Edison's method for generating and transmitting electricity was called direct current (DC), or low voltage. While Edison was enthusiastically busy in setting up his power stations, another man known as Nikola Tesla was working on alternating current (AC) during the same time, surprisingly in Edison?s own office.

Tesla was born on 10th July 1856 in Austria. He began his career as an electrical engineer with a telephone company in Budapest in 1881 and later joined the Continental Edison

Company in Paris where he designed dynamos. In 1883 he privately built a prototype of the induction motor and ran it successfully. Unable to interest anyone in Europe in promoting this radical device, Tesla accepted an offer to work for Thomas Edison in New York.

Young Nikola Tesla came to the United States in 1884 at the age of 28. With four cents in his pocket, some mathematical computations, a drawing of an idea for a flying machine, and a letter of introduction from Charles Batchelor one of Edison's business associates in Europe to Thomas Edison.

Thrilled and terrified to meet his hero, Tesla handed Edison his letter of recommendation: It read: "My Dear Edison: I know two great men and you are one of them. The other is this young man!" Tesla proceeded to describe the engineering work he had done, and his plans for an alternating current motor.

Edison knew little of alternating current and did not care to learn more about it. In short, AC power sounded like competition to Edison. But there was something different about Tesla, and Edison immediately hired him to make improvements in his DC generation plants. Tesla claimed that Edison promised him $50,000 if he succeeded, perhaps thinking it an impossible undertaking. But the potential of so much money appealed mightily to the impoverished immigrant. Tesla then set about improving Edison?s line of dynamos while working in Edison?s lab in New Jersey.

While working with Edison, Tesla was always working on alternating current and A/C motors, which indeed, Edison never liked. Edison was not looking at the drawbacks of his DC, but insisted to improve upon. The divergence opinion started emerging, and was only a matter of time until their differences would lead to conflict.

Tesla relied on moments of inspiration, perceiving the invention in his brain in precise detail before moving to the construction stage. Edison was a trial and error man who described invention as five percent inspiration and 95 percent perspiration. Edison was self-taught. Tesla had a formal European education.

Several months after Edison employed him, Tesla announced that his work was successfully completed. When Tesla asked to be paid, however, Edison seemed astonished. He explained that the offer of $50,000 had been made in jest. "When you become a full-fledged American you will appreciate an American joke," Edison said. Shocked and disgusted, Tesla immediately resigned.

Tesla did not stop at that, he started talking to industrialist to support his alternating current which he explained them was better than Edison's direct current. This disagreement climaxed in the war of the currents, as Edison fought a losing battle to protect his investment in direct current equipment and facilities. The result was that Tesla became most hated person for Thomas Edison.

However, Tesla continued his work on alternating current. The most remarkable thing was that he invented a transformer that could step up the voltage--a desperate requirement when distributing electricity over long distances.

Edison's direct current system was unable to use transformers. In Edison's system, voltage dropped as it traveled further and further from the generator. To overcome this disadvantage, power plants would have to be built close to the power users, which was a costly solution.

Tesla did not have enough money to set up his power plant, however in 1888, Tesla introduced his motors which did not use any touching parts but worked on induction principle and electrical systems in a classic paper, ?A New System of Alternating Current Motors and Transformers,? which he delivered before the American Institute of Electrical Engineers in 1888. One of the people most impressed was the industrialist and inventor George Westinghouse. And soon the perfect partnership was established between Tesla and Westinghouse.

Thomas Edison, whose money was invested in DC power systems, did his best to discredit Tesla. Edison even went so far as to claim that AC electricity was far more dangerous than his DC power. In the event his people electrocuted dogs and old horses right on the stage to prove the matter.

But Tesla astonished the world by demonstrating the wonders of alternating current electricity at the World Columbian Exposition at Chicago in 1893. Edison lost the bid for supplying electricity to this great exhibition, because Westinghouse undercut GE's million-dollar bid by half. Much of GE's proposed expenses were tied to the amount copper wire necessary to utilize DC power. Westinghouse's winning bid proposed a more efficient, cost-effective AC system.

The Columbian Exposition opened on May 1, 1893. That evening, President Grover Cleveland pushed a button and a hundred thousand incandescent lamps illuminated the fairground's neoclassical buildings. This "City of Light" was the work of Tesla, Westinghouse and twelve new thousand-horsepower AC generation units located in the Hall of Machinery. In the Great Hall of Electricity, the Tesla polyphase system of alternating current power generation and transmission was proudly displayed. For the twenty-seven million people who attended the fair, it was dramatically clear that the power of the future was AC.

Two years later, he designed the first hydroelectric power plant at the Niagara Falls in 1895, which was the final victory for alternating current. The achievement was covered widely in the world press, and Tesla was praised as a hero worldwide.

This accomplishment changed the world and alternating current became standard power by the beginning of the 20th Century as one generating station could transmit power relatively cheaply over a wide service area.

It was one of the greatest achievements in the history of electricity. But even then Nikola Tesla remained unknown to most of the world. He was a great engineer, of whom the world should well have been proud and to whom humanity owes an immense debt of gratitude.

Because making hydroelectric plants or large thermal plants including the long wires for electrical supply is much costlier, a fix amount of charges were introduced in the bill to cover the capital cost. But still the electricity with this method was far more cheaper. Huge power stations and dams are a result of AC, which otherwise would not have existed. Some of them are wonders in construction.

Today we are all so dependent on this power that it is almost hard to think about how life would be if there was no electricity. We would probably go back two centuries behind without it.

Page

This page is devoted to information about Icom, and its products.

Check in to the Icom Users' Net.

In Memoriam: George T. Baker, W5YR (http://www.qsl.net/ab4oj/icom/w5yr.html)

Newcomers to the Icom PRO family who are "moving up" from an analogue HF radio (with or without post-AGC DSP tacked onto the back end) will frequently have no concept of the radical change in radio architecture, performance and capability which they are about to experience. The PRO-series and DSP articles presented here are intended to address this "information gap". Enjoy!

RF Field Changes
James W. Searcy (WA5WRE) (http://www.eham.net/user/profile/WA5WRE)on October 14, 2005
View comments about this article! (http://www.eham.net/articles/12206#comments)

Amateur's that have been in radio for at least 25 years should best view this article. I myself have used Amateur Radio for both pleasure and research for 53 of my 59 years. As an Electronics Engineering and Amateur, I have looked at many sides of this hobby/profession. I know of changes in weather affect propagation, and seasons have their input, so knowing this for the better part of the 53 years, it has come to my attention (and possibly many others), that over the past years, communications has somehow been affected.
During the daylight hours, DX and short range communications seem to be OK, but in the evening, RF seems to be replaced with noise. The reason I gave a time span of 25 years, is because in that short period, I remember that regardless of time of day, some frequency was open. I remember having QSOs with stations all over the world, and going into the early hours of daylight.
I pose this then as my question: With the creation of HAARP and utilization of some of Nikola Telsa work, are we now playing with the atmosphere? Too many things are happening to be called "common". Weather conditions all over the world are experiencing things that have never been before. -- Climate conditions, rain, hurricanes, giant waves appearing out of nowhere, etc. Or is it just our Earth going through unusual changes?
I'm not the brightest individual in the world, nor am I an idiot, but it would appreciate other inputs to this question, pro or con.
Thank You, Jim, WA5WRE

Jim, your article is indeed timely!!!! How odd that you should write this as this has been heavy on my mind for several months and more so recently. Apart from a brief two year stint as a 2 year (non-renewable) Novice in the early 70's, I got my Tech Plus license in early 1996. When I got my first 2 meter ht a few months later, I was amazed at the conditions that I could partake of. It was a fairly normal, but nonetheless exciting, thing for me to hit repeaters 60, 100, or more miles distant with just a ht and the factory rubber duck antenna. When my (then) wife won a 2m mobile at a hamfest not long after that, we were able to hit the Greenville, SC Blue Ridge ARC repeater on 146.610 at least a couple of times a week from our ground floor apartment in West Columbia, SC and check into their net and talk with her grandmother (Elmer to both of us and many others, K4AOH). We did this with a Radio Shack 5/8 wave magnet mount antenna on a cookie sheet inside of our apartment amd running between 10 and 50 watts. The last several years, SC has seen rather severe drought and with

it, a dwindling of any meaningful "conditions" on 2m. Last year, we began to get rain on a regular basis, again, but the conditions still have not improved. Hitting repeaters in any direction that are more than 30 miles away is very rare just about anytime anymore. For a while, I wondred if it might be that the repeaters in the upstate of SC, where I used to like to make a lot of contacts were not being properly maintained or if my equipment was starting to degrade in performance. Well I doubt that all of these machines would fall into disrepair at once and I have had new radios and antennas come and go and that wasn't the problem. Also, I noticed that I can't make contact with the coast of SC as I once could. Yes, we get occasional brief bursts of propagation on VHF but it is very lackluster when compared to what we had a few short years ago. I, too, have pondered whether or not HAARP might be to blame for this and a multitude of "other" strange things going on in the atmosphere in recent years. I recall, even before getting my Tech Plus and also after, we used to get really thick heavy fog that I call "RF Friendly" as when it rolled in, you could hear some awesome skip on the VHF and UHF police bands as well as the ham bands above 144 MHz. Haven't experienced that in over 5 years. What happened???? I rarely pick up anything in the SC upstate above the white noise anymore. Even less to be heard from the SC coast. I have bounced this off of several friends and we get ideas from the weather changing patterns to sunspots, to whatever but none seem as likely to me as HAARP or similar efforts to monkey aruond with the atmosphere. Looking forward to yours and others' thoughts. 73, Ray KV4BL

If there truly is a "hole" in the ozone layer allowing a greater amount of radiation to reach the earth's surface then wouldn't that radiation cause some of the same effects you describe?

I believe the changes you hear in noise result from increasing anthropomorphic sources - in other words, sources of man-made noise that have increased in both number and power over the years.

The good news, if there is any, is that technology, especially receiver design, has also improved, so at least we amateurs have more tools in our toolboxes to fight this increasing problem.

I don't believe it'll go away, so I predict we'll be using more digital signal processing - both on the transmit as well as receive - in the future.
Jim

The internet has allowed all sorts of unsupported theories to become urban mythical in nature. It doesn't matter to most visitors that these theories are not peer reviewed; they're going to take them at face value regardless.

The debates about holes in the ozone layer supposedly caused by Freon, and global warming supposedly caused by our use of hydrocarbons are moot. We are, after all, coming off an ice age. Since modern man has never lived through one, the consequences, effects, phenomena, and other oddities can be, and are, supposition. Changes in radio propagation are certainly included in the aforementioned.

Most of man's knowledge is based on what he has observed in the past. In this case (radio propagation) is a little more than 100 years old. That's not much of a past when compared to the age of the earth.

Maybe the laws of physics have been altered by some sort of sinister Teslian longitudinal wave generator. This is how the Russians altered the weather to create hurricane Katrina.

Perhaps Louis Farrakhan's "Mother Wheel" is responsible.

Global warming and the ozone hole must surely play a part in this--damn George Bush for not signing the Kyoto Treaty.

Corporate America and Big Oil have been conspiring for years to make annoying atmospheric static while reaping huge profits on the back of the "little guy".

Let us not forget what Art Bell and Tom Bearden have been waning us about all these years.

It has been reported that the Chupacabre beast can emit RF like interference so that need to be investigated.

I've noticed that propagation pratically ceases when that spectral locomotive runs down the abandonded tracks behind my house.

Or maybe you have a wall wart that's gone bad. That seems highly unlikely though...

A few years back, at the QRP tent at the Williams, AZ hamfest, I was talking with Paul Harden, NA5N. Paul lives in a remote area of New Mexico, a really RF quiet area. He told me that one day, he was talking with a ham from the midwest, on 40 meters, when all of a sudden, the band went really quiet, but he station he was talking to didn't change in signal strength. The next morning, the local paper reported that, just as the band went quiet, there was a major power outage in southern California. Although anecdotal, it is pretty clear that the aggregate of man-made devices connected to the grid are raising worldwide noise levels.

How much is not quantified. Also, no one knows if this is essentially from the aggregate of millions of devices, or whether a smaller number of strong sources predominate. If I weren't so tied up in all this BPL stuff, I would love to investigate that with the mobile measurement set up I put together for BPL measurements. If we measure the noise in a typical town like Newington or Burlington, CT, we can get a per-capita noise level in the aggregate and run that EIRP level against the calculated IONCAP path losses and determine what the impact will be on distant areas.

ARRL did an IONCAP study that showed the reliability of HF at amateur power levels vs varying levels of man-made noise. It is pretty chilling to look at what the legal limit for unlicensed devices like BPL are calculated to do to HF.

Go to:

http://p1k.arrl.org/~ehare/bpl/ARRL_BPL_Papers.html

Exhibit C of the Notice of Inquiry filings is this IONCAP analysis.

Before Mount St. Helens blew it top on May 18, 1980 we were getting dire predictions of Global Cooling if we did not stop pollution and limit high altitude flights causing vapor trails that blocked the sun. Scientists predicted nuclear winters lasting year round killing all of us if nuclear war broke out. When Mount St. Helens blew it's top all these predictions were proven false. All the Chicken Little Scientists had to come up with something else to keep research money coming in the coffers so Global Cooling became Global Heating and dire predictions foretold of the ice caps melting and flooding New York and other cities, climate changes world wide causing crop failure and death if nothing was done

immediately by the year 2000. Here it is 2005 and none of these dire predictions have come true and were still debating if there is any real Global Warming actually happening. Topping this is the discovery that Mars has heated slightly and that the sun is in a phase that?s just slightly hotter than what has been what we consider normal since we started keeping track of that sort of thing. Funny thing is I just heard on the news that some idiot has started spouting Global Cooling again! I guess his Global Heating money has run out, as, according to them, we should all be dead from Global Heating 5 years ago.

I think that it's not about climate change. The whole world is becoming more dependent on electronic equipment nowadays. Look at the proliferation of Wifi (802.11a-n), Bluetooth, cellphones, wireless phones, wireless garage door, key-less entry for cars, wireless entertainment centers, etc. etc... All these devices plays an important role in QRN because they are all emitting harmonics to different frequencies.

As a novice I sometimes thought I heard faint, echo-ey engine spark static on HF bands, even though there were no stations operating there. If I called CQ long enough, or someone else showed up and did, it usually turned out there actually was an opening, but nobody had expected it, so nobody was operating on the band.

I still believe (especially in light of my many years of QRP operation) that even small sources of noise can be propogated long distances on HF, and combine with all the other noise sources to raise the noise floor significantly - especially when a band is open. Other evidence of this is on the good old CB band. Flip across the channels and you will know when you hit channel 19 (the highway/trucker channel used by most of the operating stations on the band). Channel 19 has a subdued roar or noise, a measurably higher noise level than the other channels even when the band seems completely closed. Either through backscatter or some similar means, noise is propogated over long distances.

From my experience, the notion that a power outage in California would reduce HF noise levels far away makes all kinds of sense. I have long expected to see the noise levels on HF rising as population increases, BPL use is expanded, and more and more people buy those cheap-o electric blankets and lamp dimmers.

As for the VHF propagation, have weather changes, air pollution, or other causes reduced the frequency of temperature inversions and other duct-producing phenomena? Has tropospheric bending been reduced by changes in air quality?
These are good things to think and learn about, as we may (do) need to do something about them. The solutions will need to be implemented on a huge scale, and will be exceeding difficult to achieve. Start your lobbying engines, folks.

Its clear that Global Warming is the cause and Bush, Cheny and Haliburton to blame. As you know, Bush refused to sign the Keyoto protocol. This refusal is the cause of global warming, destruction of the ionosphere and the earthquake in Pakastan.

1) Global warming:

Cheny and Haliburton produce fossil fuels,which, when burned, are the sole cause of planetary warming. While you might think the sun has a role in warming the earth, you would be operating under a delusion propiagted by Bush and Cheney. All those stories about alternating ice ages and thawing over thousands of years are just part of the Carl Rove's spin machine.

2) Damage to the ionosphere & Ham radio:
As the world's temprature increases, the ionosphere warms. This warming causes expansion of the ionosphere and a corrisponding decrease in density. The decreased density results in less signal being propigated. With less signal propigated, you get less signal in the receiver. At the same time, all of Haliburton's evil equipment causes an increase in electromagnetic noise. All of this is calculated to ruin ham radio and force all of us to use BGPL (Broadband over Gas Pipe Lines) which Haliburton has a patent on. Carl Rove, Bush & Cheney have a plan to do away with cable and DSL and replace them with Haliburton's BGPL at $200 per month. In fact, BPL is designed to make ham radio so unreliable, that you move to Haliburton's BGPL.

3) The earthquake in Pakastan.
The quake in pakastan is all Bush's fault. He and Cheney were using a secret millitary weapon to steer Hurricaines to poor black areas of Louisiana. But they forgotr to turn it off. Instead, it sent a concentrated beam of energy into space, where it bounced off secret oil drilling bases on the moon, and back down to Pakastan, where it heated the tetonic plate, causing release and the earthquake.

.
I can go back a few years on propagation, over 67 years to be exact.

Most years from 1936 up until 1990 were almost duplicate years and followed the 11 year cycle. However the last good years were in the year of 1990 when a mobile radio setup from California could put a 20 dB over 9 signal to the east coast (20 Meters), just the 100 watts to a Hustler mobile whip. In November 1990 I was able to work 100 dx countries both on cw and also 100 dx ssb (Ten Meters) with a swan 350 and a 2 element quad at 60 feet.

Since 1990 band conditions have decreased in propagation for those big strong signals and now has beome more or less sporatic conditions.

I lived in a very quiet location in the Mojave desert, no power line noise and such, however there were many times of this very heavy rash scratching noise that appeared from nowhere, at times blanking out all incoming signals, also causing my Icom 735 to send out a very raw ac note across the bands. This was mostly on the 20 meter band, not common to my other years.

To make a long story short, I do believe there is something going on with these big antenna systems located up and around the North Pole.

It has often been said, " men will eventually destroy themseles", how true, it can be seen.

73, W6TH...A non vanity call.

My station is in the mountains of Colorado with virtually no noise sources anywhere close. Using 20 meters as an example: During a solar flare or at night with low solar flux (ie dead band), my noise floor is very very low. During the daytime with normal 20M band conditions I would estimate my noise floor to be about 6 to 8 db higher. That is still much quieter than most hams have.

I would assume that some of that increase is due to world-wide storms (lightning). Some is due to poor phase noise of PLL-type transmitters, spreading broad-band hash across the bands. Also more amplifiers than years ago, such that -50db IMD is now 10db or so louder. Other related cause would be misc distant RFI.

On the receive side, a poor phase noise receiver will also give the impression of more noise.

Most hams do not realize how RF noisy their environment is, mostly local noise. Some of my visitors are amazed how much quieter my location is, compared with theirs.

By the way, I came across two interesting web sites that show some long-term solar and global temperature charts. Check out http://www.pages.unibe.ch/products/overheads/pdfs/beer-sunspotcycle.pdf for a Yr 1600-2000 trend of sunspots. Looks like we can blame ol' Sol!

Also take a look at http://en.wikipedia.org/wiki/Geologic_temperature_record. Especially note the 5 million year global trend and the 540 million year graph.

Interesting stuff, maybe Bush isn't responsible after all??

I've been a ham for 40 years and have noticed some things, too...but not quite as you describe.

I surely note "local neighborhood" RF pollution is far worse today than it's ever been, for everyone who doesn't live far out in the country.

It certainly seems plausible that some of this is conducted back through the power grid and radiates a lot farther than we might think.

I think there's no question that global warming *and* global cooling has been going on for millions of years, and so far we have no way to control it.

There's a link between weather in our troposphere and propagation in our ionosphere because both are very influenced by the sun. As is practically everything on our planet.

But here's one that is a man-made problem for which I have no solution:

Overall, a lot of the signals we are trying to work, irrespective of band conditions, are weaker because they're being launched by lesser antenna systems than ever before.

40 years ago, my typical 20 meter contact was using a yagi or quad, or at the very least a good dipole strung between a couple of fifty or sixty foot tall trees. Very few hams were using "compromise" antennas, antennas in their attics, or antennas they had to hide -- as such, the antennas actually worked.

Today, it's common on any band (I'll use 20m again as the example) that my contacts tell me they're using attic-mounted dipoles, dipoles strung along five foot-high fences, indoor loops, greatly shortened verticals and all sorts of stuff that hardly works at all. As such, I'm straining to hear them, much more than I ever had to strain 40 years ago.

I think *this* is a HUGE factor, and can make the bands sound full of crappy, noise-laden signals simply because they're weak.

Contrast that to a major DX contest weekend, when half the signals on the band (the contesters) are using big beams on tall towers, and all of a sudden everybody's 40dB/S9 again.

Restrictive zoning, and worse, CC&Rs, are the cause of the crappy signals in many cases. It's a huge influence, just like the sunspot cycle.

WB2WIK/6

Right off the bat I would say the authors assertion is uh,,,,, bold!

That?s a nice way of saying he is making a huge assumption with little fact!

I would ask him:

1) In this vast 25 year (chuckle) data collection span, what has been the :

A) Station gain of your receiving station (data collection point)?

B) Front-end gain of each comparative receiver?

C) What is the difference in dynamic range of each receiver used (probably for such ?assessments? {chuckle} the most important question)?

2) Do you think a broader sampling might be better (like say at least as far back as the Maunder Minimum)?

3) Do you use different methods of working this DX (Shsssssshh, I know the rest of us do {said in a whisper})? I?m thinking of course of both E-layer, and F-layer {as well as a few others}, inclusive of even taking advantage of the D-layer when it is stimulated.

These are just a few off the top of my head thoughts {we won?t discuss Tropospheric Ducting, Trans-equatorial skip, or Thermal Inversion}. I mean these other things are ?weather? related, but what do you mean by DX? A range of frequencies would kinda be a good consideration too, don?t?cha think?

I mean this is a serious scientific study, right?

For the first responder to this article, Ross Hull would I?m certain be staggered at your findings. I mean, what you have accomplished on VHF, simply puts years of his work to shame!

YI9VCQ, I think you meant to say ascribe, not describe.

W2NSF, while your input describes only one probable source and premise, it is much better and more accurate than the authors!

Alan, I think that may be the best thing I have ever heard you say!

N2XE, come now sir! I cannot allow your last assertion to stand! Simply poppycock!

W1RFI, an interesting assessment, and ARRL study! Especially when considered that you guys also thought that 1 Watt output transmitters on hospital rooftops (no rooftop height

specified, and no antenna gain specified) on 5.6 GHz for nation wide marketed devices would pose no difficulties for any Amateur operations!

N4ZOU, yup! For the rest, read Lowell Ponte?s ?The Cooling?

WA3KYY, another better premise!

Patrick526, probably more QRM rather than QRN but, hey, the ARRL is looking out for .00017% of our spectrum for us, thank god!

KT8K, Tim, yours is a much better assessment than the authors, and a better scientific study too!

Vito, I think you and I have a few different observations old friend! Suffice it to say, your observations are a heck of a lot better than the authors! Psssst, your preferred mode of choice also gives you about 8 to 12 dB advantage over most of us poor ?phone men?! ;-)

K0IZ, stop sir, you must stop! I cannot stand to hear yet another, of these VERY few, rational responses!

Oh Steve, are you telling me I have to be ?like these Ham?s out there? and put up a real tower? Come now, can?t I just use a magnet-mount on a cookie sheet for 20 Meters? Come on, be real, that da*n thing is so big it barely fits in my den! I?m thinking of just mounting ?The Resonator? {kinda like an Arnold thing? directly on my ?Antenna Tuner?. Isn?t that what such tuners were made for, I mean so that we would not have to use REAL antennas!

The reason why you don't hear as many stations is that there are fewer active hams, especially on CW. The ham population is aging and that means not staying up all night to work 40m CW.

Compare activity and signals on a typical day vs. when a major contest in going. There are many strong signals and the bands are crowded when a contest is on.

I think with all the newer means (cell phone, email, web sites) of contacting our friends and fellow hams we use the radio less and less for routine communications. Instead we use it for contests and special activities.

Finally, I think we are dealing with our own human perception. It's 10 or 11 years since the last sunspot minimum and we all tend to forget how bad the HF bands get (compared to our rememberence of previous cycle peaks). Add this to the fact that the last peak was somewhat lack luster compared to the two that preceed them, and you are bound to have some disappointment.

We need some ways to rekindle some enthusiasm to increase activity levels on HF. Contesting (although much maligned by rag chewers), less traditional modes like PSK, and Rtty, and QRP and field operation help keep the old spark alive.

So stop looking for mysterious causes in the ionosphere. Start looking in the mirror. There is nothing mysterious going on.

If it's just the proliferation of noisy electronic devices, and the noise can propagate like any other RF signal, then the global noise level should be rising with population as well.

Over population worries me a lot more than just global warming or rising ocean levels. In the late '90's demographic experts pointed out that, given some pretty good estimates of the earth's capacity to provide food (about 7.5 billion), human population would exceed the food capacity of the world well before 2050. We passed 6 billion a few years ago, and I heard recently that we are adding 1 billion people every 13 years now. That won't mean global famine, but there will certainly be famine in many areas (North America has more food than it can eat ... for now).

Besides a continual upswing in electrical noise levels, I expect wars to increasingly break out over food, water, energy, and increasingly large movements of refugees. We in the US are currently using 25% of worldwide energy production (or something like that) while we have less than 5% of world population, but other areas of the world are catching up in per capita energy use (and noise production).

Big disasters like hurricanes create more and more deaths and damage, not because they are necessarily worse than in the past, but because there are so many more people and buildings in their paths. I recently learned that the water tables in the Arizona deserts have dropped from around 12 feet to over 100 feet down in the last few decades, and I didn't see a single low flush toilet while I was down there this year. What are people thinking?

I don't think I'll be around to see how it is all resolved, but a huge crisis driven by overpopulation is inevitable before 2050 unless we do something about it. Show me one major problem that, at its root, isn't driven by over population. Conservation measures will only delay the inevitable.

Only birthrate reduction and control will really address the problem. Otherwise, Mother Nature will address the problem as she does with other species that get out of control: their numbers are reduced by disease, environmental pollution, famine, conflict/war, and natural declines in birthrate caused by decreasing rates of fertility, increasing incidence of homosexual behavior (in mammals, for sure), increasing stress/mental illness, and other factors. Consider how big a part China's population control laws have improved their current economic prospects. Either we do something or Mother Nature will take care of the problem.

The appalling thing is that I have heard only the smartest liberal politicians talking about overpopulation, and that has been ignored by the press. The conservatives seem completely blind, and more interested in manipulating the masses with short sighted, diversionary tactics like exciting people about gay marriage and abortion so they can get reelected and make rich folks and corporations richer.

We need to start thinking, and thinking ahead, if we want to avoid a terrible global scenario for ourselves and our descendants. Gay marriage is fine with me - they're unlikely to have kids! But religions that encourage big families are doing nobody any favors.

So please fight the increase in electrical noise on the bands by weighing in against overpopulation with your government representatives.

.
I can prove that the ionization, etc can be chamged by theory and math, but there will be few that will be able to follow my math calculatons.

In my opinion, I honestly believe there are experiments, (A test under controlled conditions that is made to demonstrate a known truth going on with our ionosphere).

Ionization, Recombination, and Attachment
An electrical discharge is produced when gas molecules or atoms are ionized by electron impact. In the absence of losses, the change in the electron density is given by:
Calculus, higher math which most will not follow so will just leave it as it is.

My opinion for this experiment is to weaken, destroy "a" military action without the loss of life.

.
what about these changing RF fields?

Radiofrequency (RF) fields are part of the electromagnetic spectrum. For the purpose of the International EMF Project, such fields are defined as those within the frequency range 10 MHz (or 10 000 kHz) and 300 GHz. Natural and human-made sources generate RF fields of different frequency.

Common sources of RF fields include: FM radio (30 - 300 MHz), mobile telephones, television broadcast, microwave ovens, medical diathermy (0.3 - 3 GHz), radar, satellite links, microwave communications (3 -30 GHz) and the sun (3 -300 GHz).

RF fields are non-ionizing radiations (NIR). Unlike X-rays and gamma rays, they are much too weak to break the bonds that hold molecules in cells together and, therefore, produce ionization. RF fields may, however, produce different effects on biological systems such as cells, plants, animals, or human beings. These effects depend on frequency and intensity of the RF field. By no means, will all of these effects result in adverse health effects.

RF fields above 10 GHz are absorbed at the skin surface, with very little of the energy penetrating into the underlying tissues.

Who was it that mentioned Bush and his weapons of masterbation?

73, W6TH... This is not a vanity call.

I have consistently used CW since 1959 and have been fortunate enough to have had fairly good receivers and moderately good antennas. I am also fortunate to live in the "far suburbs" where local noise is minor (as far as I can tell). The long-term increase in background noise on 80 & 40 over they years is apparent. The "shape" of the noise seems to have changed also. I seem to remember a more "even" white noise in earlier years.

The noise growth on 20-10 meters is not as apparent to me.

My conclusion: zillions of small sources spread over most of the earth. Nothing we can do about it. Long term conclusion: ham radio will become much more VHF centered. I hope reasonable HF operation lasts the rest of my lifetime, but the fantastic explosion of digital and switching devices makes this unlikely. The reluctance of the FCC to enforce product conformance does not help, but that is secondary to the sheer number of devices all around us.

I too have noticed the increased noise levels in just the past 20 years. I have been a ham since 1996 and have noticed a change in the radio environment of the spectrum. However, I would have to agree that much of the problem may be found in the increased use of electrical devices in the development of the modern world.

The increasing number of electronic devices that have appeared in the past 100 years is staggering. Electricity is the increased or elevated motion of electrons and when you get that many electrons moving it will cause electrical interference, AKA 'noise'. Also, the increased sensitivity of radio equipment as it has progressed in the last half of the 20th century has created the opportunity for everyone to 'hear' this increased noise level.

We are not the only ones experiencing problems with terrestial noise.

Astronomers are seeking support for cities like Phonix and Chicago to reduce the amount of light used at night, aka 'city shine' so that they can promote better astronomical observation opportunites. Turning off a few lights to improve the 'noise' level increases our chances of exploring our natural resources (the ionosphere, the universe, etc.)

I like to examine what some of the Old Timers did to improve their noise levels.

Consider the source of the noise and try to reduce any local interferences. As amatuer radio persons, we take careful measures to reduce any TVI or other interferences to maintain our hobby within the confines of today's world of poorly shielded devices and fussy household appliances.

Some of these comments on this subject have noted the increased use of Digital Signal Processing (DSP) and I must agree it can help with offending band noise, but I would like to encourage fellow amateurs to also examine their antenna installation, connections, and particularly grounding techniques.

I have seen some very sloppy construction techniques that may create some terrific results and keep the neighbors happy, but the band noise is barely tolerable.

Now, I say all this after sitting in my Toyota Tundra truck with my FT-817ND, plugged into my lighter socket and contacting N1PGT located just north of Carson City. The engine noise from my engine was awful, but I wasn't trying to fix the noise problem, I just wanted to see if the antenna was working as it should (PAC-12 antenna). (See my web site if you are interested in the details)

WA6BFH, I know that my observations are not "scientific" per se, but the bottom line is that something has gone really crummy with VHF and UHF propagation in my neck of the woods. It has been this way for over 5 years now and I have made changes to radios, antennae, and feedlines and it is not the equipment. Several of my friends who were licensed at about the same time as myself have noted it this phenomenon also. The solar cycles generally are affecting hf, as I understand it, and not so much on VHF / UHF. As I was an avid scanner listener and utilized VHF / UHF equipment on the job for the last several decades, I know that decent (and sometimes annoying) propagation was to be found on a very regular basis. "Something", has caused it to be almost unheard of in the last five or so years. I am not prepared , nor do I have the time or inclination, to offer a "scientific" dissertation on

why this is. I would like to hear others' input, though. To Tim, KT8K, you have hit the nail on the head regarding our overpopulation! It is really sad just how blind the majority of people are to overpopulation and the toll it takes on the ecology and quality of life for all of us. I don't understand why it is necessary to have three kids (or more) when two (or less) should do. Two produced by one man and one woman should be somewhere close to zero population growth. Besides the loss of wilderness and places to go to "get away from the crowd", one of the most obvious detrimental effects is the enormous increase in traffic on the roadways. Yet, government encourages unchecked reproduction by giving tax breaks for having more kids rather than taxing in proportion to the demand created for services like schools, roadways, water and sewer, etc. Will they ever wake up? Probably not.

The real problem is the "clean air" laws. We no longer have the lead particulates in the air to reflect VHF signals.

The lead floats in the air by the same physics that allows heavier than air CFA's to climb to extreme altitudes and eat up the ozone.

I actually was told by Big Foot last night that the whole thing is caused by CBers running 50KW amplifiers. The story is that 27 Mcs was used for diathermy years ago to heat sore muscles. It was thought that the change from Mcs to MHz would change the way these frequencies behaved. A new government study has been awarded to UCLA to determine the reason for failure. (2.1 Billion Dollars).

We just have to keep convincing the uninitiated that it is a sun spot cycle.

The noise levels certainly have increased over the years...and most of it is man-made (part 15 devices, OTHR's, etc.)...some of it is also due to changes in solar activity. At night on 40 meters I sometimes see broadband noise bring the noise floor up 20 dB on the PROIII scope..it slowly rises then slowly decays...I see this at both my Maine and Virginia QTH's.

From: vijay motwane
Topic: 2805 Message: 2805

Uniden Bearcat BCD-996T (Trunktracker IV)

Specifications are preliminary and may change

Type:

HF/VHF/UHF receiver/scanner

Frequency range:

25-512 / 806-956 / 1240-1300 MHz
Cellular blocked

Mode:

AM/FM/WFM/APCO25 Digital

Sensitivity:

N/A

Selectivity:

N/A

Image rejection:

N/A

Voltage:

13.8 VDC

Current drain:

Max ? mA

Impedance:

50 ohms, BNC

Dimensions (W*H*D):

? mm

Weight:

? Kg

Manufactured:

2006-200x

Other:

6000 dynamic memories. CTCSS/DCS. "Close Call" RF capture technology.
GPS-enabled for location-related scanning. When a GPS-unit is connected, it
can also alert at areas of special interest, such as dangerous intersections,
school zones or general points of interest (fixed speeding cameras anyone?).
Tracks Motorola I, II & IIi and EDACS and LTR
Will probably be released spring 2006 for about $850.00

Related documents:

Subject: [m_a_r_s] JOTA REPORT

FRIENDS

This is a short report on the JOTA event which was conducted on 15th oct at Shree Ram Welfare high school in Andheri which could be held only for a day because of limited participation .
THE LIST OF MARS MEMBERS WHO WERE ACTIVELY INVOLVED IN THE JOTA EVENT
1) SANDESH KAMAT --- VU2SXF
2) IVOR PERIERA ----- VU2IVO
There were also few visiting hams
1) MUKESH VAIDYA
2) ARUN SINGH ----- VU2AUA
3) PRAVIN PANCHAL ---- VU3PAN

THE SETUP OF STATION
FT 840 HF TVR WITH SMPS & DIPOLE FOR 20 & 40 MT BANDS
IC 2100H VHF BASE WITH SMPS & 5/8 VERTICAL

On 14th oct I installed the dipoles for HF on 15th oct I reached the school at 8.30 am checked the SWR for the bands I was joined by Ivor at 9.45 am & then we installed the vhf ant we were on HF by 10 am to find poor band conditions so we were forced to use only VHF band . Ivor delivered a short lecture to the students about ham radio .
We were in touch with chembur & mira road stations .
Students from 5 schools participated in the event i.e from goregaon , borivali & bandra(bmc school)
about 100 students came on the air .
We had a contact with A47JOTA the only station heard on HF from MUSCAT with 59 RST.
rest nothing was heard so HF was shut down .We almost finished with all the students by 2.00 pm & we shut the station by 2.30 pm overall we had a fair response .

FINALLY I WOULD LIKE TO THANK JAYESH VU2ESP FOR LENDING HIS HF RIG
& NILESH DIXIT FOR HIS VHF RIG & SMPS.& ALSO THANKING ALL THE PARTICIPANTS
FOR THIS EVENT .

THANKS & 73

DE VU2SXF
SANDESH KAMAT

Dear Members,

I am very pleased to inform that our accounts for the year 2004-2005 are completed, and Audited... The same will be filed on 31/10/2005 by our auditors and hence we will retain our 80 G benefits and priviliges..

The accounts are finally completed before the deadline of 31/10/2005, thanks to the efforts put in by YOT,CBU,SFN & UGO. It would also not have been possible without the kind cooperation of our Auditors Dinesh Jain & Co, who put in 10 hours straight out of this prime time, to audit the accounts and help us finalizing them.

The Managing Committee has finalized the A.G.M date as Sunday 20th November 2005. The Venue, Time & Agenda will be informed to you shortly once we have made the reservations.

Each year we have great difficulty in getting 7 members to run for elections, I sincerely hope that this time we will not face that problem,

I am enclosing the copy of Nomination form for our convienence. Members may treat this as official Nomination form, Although we will send you the same by courier service.

Further the data base of addresses of our students / Members of our MARS-ACADEMY group (Batch) is not available with me as most of them have not submitted their Members application form. They are therefore requested to treat this soft copy of the Nomination form as original and file the same.

Also members are requested to pass this nomination form to members who are not on our E-Groups, Their nomination form will be accepted if they are eligible for contesting the election.

All members wishing to contest for election must ensure that their nomination form is physically received (Hard Copy, duly filled, Signed, Proposed and Seconded) by the Secretary (VU2NLF) before 17th November 2005, 18:00 Hours. After which the nomination from will become invalid.

Mr. Nilesh Rathod. - Secretary MARS.
803, Sidharth Ganga Towers,
Kalyani Nagar,
Pune - 411 006.

Tel: 020-56222850.

The Eligibility for contesting for the Election as per our society bye-laws is as under :-

12. ELECTION OF MANAGING COMMITTEE.

A) ELIGIBILITY:

Contesting and Voting for the election to the Managing Committee.

(1a) Any member whose name stands on the society's register for the
period of Twelve months prior to the date of election. However
this does not apply to the Founder Members.

(1b) And who has a valid Amateur Radio License

(1c) And who has paid all his Subscription for the ensuing year and
paid all his dues and arrears.

(2) An Honory Member shall not be eligible to stand or to Vote for the
elections.

B) NOMINATION:

(1) Any member who is eligible for election under the abovesaid rules
and who desires to contest the election to the managing committee
shall be proposed and seconded by two members in writing on the
prescribed nomination paper issued for the purpose. The nomination
paper shall be signed by the members proposing and seconding and
the nominee. The nominee shall countersign the nomination paper
signifying his willingness to contest the election and serve on
the committee if elected.

(2) The nomination paper shall be dispatched to each member atleast 20
days before the date of election. Such nomination paper shall
be returned to reach the Secretary atleast three days before the
date of the election.

I sincerely hope that many many members will come forward and file their nominations to
Govern & work for the great society with full dedication.

73
Nilesh - VU2NLF
Secretary - MARS.

Dear Nilesh,
I was very happy to know that the accounts are closed & submiited within the required time limit. However, even though I want to attend the AGM very much, I will not be able to attend the same if it is held on 20th November 2005 as I will be out of station. I hope you can delay the AGM by a little & keep the same any time later than 23rd November 2005.

Happy Diwali & a very happy new year to you & to all MARS members.

2832. ARD9000 Digital Voice Modem

Yahoo group: m_a_r_s
Date: 2005-10-31 15:44:45 UTC
From: vijay motwane
Topic: 2832 Message: 2832

ARD9000 Digital Voice Modem

Hearing is believing!

Try it yourself !

You?ll be amazed at how much fun it is
to work ham radio in digital voice mode.

All over the world, hams have been discovering how much fun it is to work HF without background noise.

AOR set the pace in this breakthrough technology with its ARD9800. Now, in response to worldwide demand, AOR has developed the ARD9000 which makes digital voice communications even more affordable.

AOR?s digital voice technology delivers audio quality you have to hear to believe. Whether you are working digital voice across state lines or across an ocean, amazing doesn?t seem strong enough to describe it.

With an ARD9000, it?s easy to convert existing HF analog transceivers to work digital voice with NO transceiver modifications. The ARD9000 automatically detects a digital signal and decodes it, so you also maintain full analog capabilities. Whether a contact comes in as digital or analog, the ARD9000 can handle it.

Digital voice could be the biggest
revolution in HF radio since SSB!

Enjoy digital voice communications while maintaining analog capabilities.

The ARD9000 makes digital voice communications FUN & affordable. Now you can use your existing analog transceiver to work digital voice on Amateur Radio bands without making any modifications to your transceiver.

No transceiver modifications needed.
The ARD9000 uses the same audio frequencies (300 Hz ~ 2500 Hz) as microphone audio to modulate the voice signal. This allows you to use an analog radio as a digital voice radio.

Works on Single Side Band (SSB) mode.
The Automatic frequency clarifier function adjusts frequency drift automatically in the SSB mode. (Approximately up to +/- 125 Hz). Utilizes the OFDM (Multi Carrier Modulation) circuit that is effective
against Multi-path or Selective Fading.

Automatic digital receive
Automatic voice signal detector recognizes the received signal as analog or digital, automatically switching to the appropriate mode.

Built-in high grade Vocoder (AMBE)
Utilizing high-grade digital voice compression delivers quality digital voice communications.

Built-in FEC error correction
A powerful error correction circuit delivers stable and reliable communications.

Small and compact unit. Easy to operate.
Simply connect the ARD9000 between the microphone jack and microphone. No complicated modifications necessary. Optional interface cables for most popular transceivers are available or you can build your own connectors.

Wide range of operating voltages
Operates on 10 to 16 V DC from an external power source.

Utilizes a uniquely designed high performance DSP engine

Uses established G4GUO open protocol
The use of open digital protocol means use of the ARD9000 is permitted on US Amateur Radio bands (non-USA users should check applicable
regulations).

Discover how much fun it is to work Amateur Radio
in digital voice mode using the ARD9000 and your
EXISTING analog transceiver!

SPECIFICATIONS

Modulation method

OFDM

Band width

300 Hz - 2500 Hz, 36 carriers

Symbol Rate

20 mS (50 baud)

Guard interval

4mS

Tone steps

62.5Hz

Modulation method

36 carriers: DQPSK (3.6K)

AFC

+/- 125Hz

Error correction

Golay + Hamming

Header

1 Sec. 3 tones + BPSK training pattern for synchronization

Digital voice

AMBE coder, decoder

Signal detection

Automatic Digital detect, Automatic switching between analog mode and digital mode

Power requirements

10 - 16 V DC, Approx. 100 mA (@ 12 V DC)

Dimensions
(w, h, d)

70 x 33 x 98 (mm) or 2.8 x 1.3 x 3.9 (inches) (Projections excluded.)

Weight

175 g.

Connectors

Radio: Microphone output (level adjustable),

Speaker input (200 mV ~ 5 V p-p), External Speaker Output

DC Input Connector

Speaker Microphone (with PTT)

2833. ARD9800 Fast Modem

Yahoo group: m_a_r_s
Date: 2005-10-31 15:47:39 UTC
From: vijay motwane
Topic: 2833 Message: 2833

ARD9800 Fast Modem

DIGITAL Voice
&
Image interface

Convert your
Analog Transceiver to Digital
In One Easy Step !

Use a conventional voice Use a conventional voice transceiver for digital voice communications, data and images while data and images while you maintain analog capabilities.

The ARD9800 is a breakthrough in communications technology. By simply connecting the ARD9800 to a pair connecting the ARD9800 to a pair of transceivers, clear, reliable transceivers, clear, reliable digital communications are a communications are a reality.

Digital voice communications using existing
analog 2way radios.
The ARD9800 uses the same audio frequencies (300 Hz - 2500 Hz) as microphone audio to modulate the voice signal. This allows you to use an analog radio as a digital voice radio.

Works on Single Side Band (SSB) mode.
The Automatic frequency clarifier function adjusts frequency drift automatically in the SSB mode. (Approximately up to +/- 125 Hz). Utilizes the OFDM (Multi Carrier Modulation) circuit that is effective against Multi-path or Selective Fading.

Digital Slow Scan TV
Built-in video capture function (NTSC). Compresses the signal into AOR?s original adaptive JPEG. Send and receive images (similar to analog slow scan TV, but faster) in the digital mode. Built-in video output connector (NTSC) allows viewing the picture on an external monitor. (ME-1 Memory module(Option) Required)

Built-in high grade Vocoder (AMBE)
Utilizing high-grade digital voice compression delivers quality digital voice communications.

Built-in FEC error correction
A powerful error correction circuit delivers stable and reliable communications.

High speed data communications on the HF band
High-speed (3600bps) data communication is possible on the HF (High Frequency) bands. (Speed may be limited by regulations in certain jurisdictions.)

Small and compact unit. Easy to operate.
Simply connect the ARD9800 between the microphone jack and microphone. No complicated modifications necessary.

Wide range of operating voltages
Operates on10 to 16 V DC from an external power source. 6 V DC operation is also possible by changing an internal jumper setting. Low power consumption (Approximately 160 mA at 12 V DC)

Utilizes a uniquely designed high performance DSP engine

Uses established G4GUO open protocol

SPECIFICATIONS

Modulation method

OFDM

Band width

300 Hz - 2500 Hz, 36 carriers

Symbol Rate

20 mS (50 baud)

Guard interval

4mS

Tone steps

62.5Hz

Modulation method

36 carriers: DQPSK (3.6K)

AFC

+/- 125Hz

Error correction

Voice: Golay + Hamming
Video/Data: Covolution + Reed-Solomon

Header

1 Sec. 3 tones + BPSK training pattern for synchronization

Digital voice

AMBE2020 coder, decoder

Signal detection

Automatic Digital detect, Automatic switching between analog mode and digital mode

Video Compression

AOR original adaptive JPEG

Video

NTSC Input/Output

Power requirements

10 - 16 V DC, Approximately 200 mA Typ(@ 12 V DC) 6 V DC by internal jumper setting

Serial port

RS-232C, 9600 bps, Asynchronous

Dimensions
(w, h, d)

100 x 32 x 158 (mm) or 3.94 x 1.26 x 6.14 (inches) (Projections excluded.)

Connectors

Radio: Microphone output (level adjustable),

Speaker input (500 mV ~ 5 V p-p), PTT (Push To Talk),

Video IN/OUT: NTSC 1 V p-p (75 ohm)

MIC

Microphone input, Speaker output, PTT input

Others:

Signal Encryption for commercial applications (wherepermitted; special commercial version required)

You don?t need a new radio to begin exploring the new world of digital communications. All you need is the ARD9800 Fast Modem!

Digital Voice Communications on Amateur Radio bands. You get clear, crisp audio at the touch of a button.

Automatic Mode Recognition
The ARD9800 automatically recognizes incoming digital signals and starts decoding those signals immediately.

Maintains Analog Capability
You keep the ability to communicate in conventional analog modes. And you can easily shift between digital and analog operations.

Send Images Too!
With the optional memory module, you can send photos or captured video images quickly and easily. View the images through any NTSC monitor that has a video input. It?s like SSTV, only faster!

No Rig Modifications Needed
All you need to do is connect the ARD9800 to your Amateur transceiver?s microphone and speaker output ports, using the supplied cables. (You will have to prepare a connector for your rig?s microphone port.) It?s a simple, easy process to start using digital communications and there are no internal modifications or adjustments needed for your radio.

2842. Tips for all batttery users from e.ham.net

Yahoo group: m_a_r_s
Date: 2005-11-03 05:11:52 UTC
From: dinesh patel
Topic: 2842 Message: 2842

Hello martians

Following are tips for taking care of all types of battries.

***** Caution *****
The following is an article reproduced from eham website and reader should consult expert if required before applying any tips if not confident.
--Dinesh Patel

Recharging HT Batteries
Michael S. Higgins (K6AER) on November 2, 2005

Many hams often wonder why their batteries last only a few years awhile other hams are using their rechargeable batteries 6 years after buying their HT with long use cycles. Your charging and discharge habits have more to do with your battery life cycles.

These tips will optimize performance and obtain longer life cycles from your rechargeable batteries.

1) Initialize your new battery by charging overnight before using it.

Nickel Cadmium or Nickel Metal Hydride: 14-16 hours

Lithium Ion: 1 to 2 additional hours after charger light turns green

2) New, non-initialized batteries must be stored in well ventilated, cool and dry locations. Batteries
stored in these conditions may be stored:

Nickel Cadmium - up to 2 years

Nickel Metal Hydride - up to 18 months

Lithium Ion/Polymer - up to 18 months

3) If used batteries are removed from service for periods longer than 30 days, they should be
discharged to about 50% of their capacity before storage.

4) Batteries which have been stored for more than two months should be fully discharged and
recharged.

5) Do not leave your radio and fully-charged battery in the charger when not charging. Continuous
charging will shorten battery life.

6) Only charge a battery when it needs it. If it is not fully discharged, do not recharge it. Carry a
spare.

7) Stabilize batteries to room temperature (72 F) before charging.

8) Do not return fully charged non-impres batteries to the charger for an ?extra boost?. Repeated
short cycle charging will shorten battery life.

9) Batteries will no store indefinitely. Do not buy a spare battery to use in a few years after your
present one dies. The battery will last longer with careful use than sitting on the shelf
indefinitely waiting for initial use. Buy your replacement battery when you need it.

10) Store batteries at room temperature. Batteries exposed to low or freezing temperatures will
have a shortened life.

11) Do not quick charge batteries from a high current source. It will separate the internal acid gell
and you risk explosion from heat build up.

12) Not all batteries packs are built the same or have the same quality. Buy cheep and buy often is
the caveat in the two way radio world.

DIGITAL SSB WITH ANY HF RADIO!

The AOR AR9800 could be the biggest revolution in HF radio since SSB replaced AM

The ARD9800 is a modem unit that connects to the mic input of any transceiver. The user simply wires a connector for his particular transceiver, connects the speaker output of his transceiver to the modem and then connects the modem to a 12 VDC power source.

AOR donates TWO digital voice/image ARD9800 units to W1AW
(http://www.aorusa.com/w1aw.html)

Main Features

- NORMAL ANALOG OPERATION OF THE TRANSCEIVER REMAINS INTACT
- Digital voice HF is possible by selecting the Digital Mode
- Incoming digital voice signals are automatically decoded, no selection necessary.
- NO MODS TO THE TRANSCEIVER ARE NEEDED

WHY DIGITAL?
1. The ARD9800 provides NEAR FM QUALITY audio using SSB.
2. The digital signals may require LESS SIGNAL than analog throughput making operations possible under adverse band conditions.

HOW DOES IT WORK?
Understand that this is a greatly simplified explanation: the ARD9800 digitizes the signal and divides into 36 PSK sub-signals in the bandwidth occupied by a normal voice audio signal.

IS IT LEGAL?
The ARD9800 uses an open published digital protocol (G4GUO) per FCC rules. In the USA, you may identify in digital or analog mode.

DOES IT WORK IN OTHER MODES?
Yes! The ARD9800 can be used in AM or FM modes, however, FM mobile operation could be prone to "picket fencing" which could result in the loss of data.

IS THERE A MARKET FOR THIS?
The ARD9800 was demonstrated for audiences at Dayton and Friedrichshafen.
HAMS LOVED IT! Most asked question was, "When is it available?"

WHAT ELSE DOES IT DO?
With the optional memory board, images can be easily transferred, similar to SSTV but we believe the ARD9800 sends a higher quality image. You can also send file transfers.
Owner can use ARD9800 mic, or a mic of their choice (wired for ARD9800 input).

WHAT MUST I DO TO GET ON THE AIR WITH THE ARD9800?
The ARD9800 package includes, modem, mic, cables and manual.
1. You must build (or buy) a cable that interfaces from the rear panel of the ARD9800 to

the mic input of your transceiver, similar to a packet radio connection between a TNC (modem) and your radio. Then simply connect the mic input cable, the "speaker out" from your transceiver to the "audio in" on the ARD9800 and connect the power cable to the ARD9800.
2. It is suggested that you power the ARD9800 from a well regulated DC power supply. The use of "wall cube" and some "switching" power supplies is not recommended.
3. Be sure your mic and audio output settings are OK.
4. Make a test transmission in the analog mode prior to operating in digital mode.

ARE THERE OPERATING SUGGESTIONS?
1. Try to coordinate your frequencies as closely as possible. There is some small margin for error, but best results are obtained when both transceivers are exactly on the same frequency.
2. Be sure your audio filters are about 3KHz or wider.
3. Don't "overdrive" your ARD9800 with too much audio from your transceiver.
4. Don't transmit using "compression" (also known as a speech processor).
5. Be sure your ALC is within its specified operating region. If in doubt, lower audio output seems to work better than a higher setting.
6. Be mindful of your bandwidth when selecting a frequency on which to transmit. Be sure you will not interfere with operators on adjacent frequencies.

WHAT ABOUT DUTY CYCLE?
Your duty cycle will be more intense. This is important to users of amplifiers. Because the digital signal makes full use of the SSB audio bandwidth, you should consider that you will be transmitting at the maximum power output you have selected. At maximum power settings, this will likely result in your transmitter consuming more power and generating more heat. If you transmit images or large data files, your "key down" time could be three minutes or more.

ARE THERE OTHER SOURCES OF INFORMATION?
Below please find web sites that are NOT affiliated with AOR.
AOR takes no responsibility for their content.

Specification

Modulation method:

OFDM

Band width:

300 Hz - 2500 Hz, 36 carriers

Symbol Rate:

20 mS (50 baud)

Guard interval:

4mS

Tone steps:

62.5 Hz

Modulation method:

36 carriers: DQPSK (3.6K)

AFC:

+/- 125 Hz

Error correction:

Voice: Golay + Hamming
Video/Data: Covolution + Reed-Solomon

Header:

1 Sec. 3 tones + BPSK training pattern for synchronization

Digital voice:

AMBE2020 coder, decoder

Signal detection:

Automatic Digital detect, Automatic switching
between analog mode and digital mode

Video Compression:

AOR original adaptive JPEG

Video:

NTSC Input/Output

Power requirements:

10 ~ 16 V DC, Approximately 200 mA Typ(@ 12 V DC)
6 V DC by internal jumper setting

Serial port:

RS-232C, 9600 bps, Asynchronous

Dimensions (w, h, d):

100 x 32 x 158 (mm)
or 3.94 x 1.26 x 6.14 (inches) (Projections excluded.)

Connectors:

Radio: Microphone output (level adjustable)
Speaker input (500 mV ~ 5 V p-p), PTT (Push To Talk)
Video IN/OUT: NTSC 1 V p-p (75 ohm)

MIC:

Microphone input, Speaker output, PTT input

Others::

Signal Encryption for commercial applications
(where permitted; special commercial version required)
Analog/Digital mode selector
Video capture/transmit switch

Specification & price subject to change without notice due to continuous development of the receiver. E & OE.

ARD9000 - Voice modem - hearing is believing !
NEW low cost digital voice modem, FM quality over an SSB HF link !!

THE ARD9000 IS OFCOM AND CE APPROVED

All over the world, radio amateurs have been discovering how much fun it is to work HF without background noise.
AOR set the pace in this breakthrough technology with its ARD9800. Now, in response to worldwide demand, AOR has developed the ARD9000 which makes digital voice communications even more affordable.

AOR?s digital voice technology delivers audio quality you have to hear to believe. Whether you are working digital voice across state lines or across an ocean, amazing doesn?t seem strong enough to describe it.

With an ARD9000, it?s easy to convert existing HF analogue transceivers to work digital voice with NO transceiver modifications. The ARD9000 automatically detects a digital signal and decodes it, so you also maintain full analogue capabilities. Whether a contact comes in as digital or analogue, the ARD9000 can handle it.

Discover how much fun it is to work Amateur Radio in digital voice mode
using the ARD9000 and your EXISTING analogue transceiver!

Enjoy digital voice communications while maintaining analogue capabilities
The ARD9000 makes digital voice communications FUN & affordable. Now you can use your existing analogue transceiver to work digital voice on Amateur Radio bands without making any modifications to your transceiver.
No transceiver modifications needed
The ARD9000 uses the same audio frequencies (300 Hz ~ 2500 Hz) as microphone audio to modulate the voice signal. This allows you to use an analogue radio as a digital voice radio.

Works on Single Side Band (SSB) mode
The Automatic frequency clarifier function adjusts frequency drift automatically in the SSB mode. (Approximately up to +/- 125 Hz). Utilizes the OFDM (Multi Carrier Modulation) circuit that is effective against Multi-path or Selective Fading.

Automatic digital receive
Automatic voice signal detector recognizes the received signal as analogue or digital, automatically switching to the appropriate mode.

Built-in high grade Vocoder (AMBE)
Utilizing high-grade digital voice compression delivers quality digital voice communications.

Built-in FEC error correction
A powerful error correction circuit delivers stable and reliable communications.

Small and compact unit. Easy to operate
Simply connect the ARD9000 between the microphone jack and microphone. No complicated modifications necessary. Optional interface cables for most popular transceivers are available or you can build your own connectors.

Wide range of operating voltages
Operates on 10 to 16 V DC from an external power source.

DSP
Utilizes a uniquely designed high performance DSP engine.

Uses established G4GUO open protocol
The use of open digital protocol means use of the ARD9000 is permitted on Amateur Radio bands (UK, USA, Japan and most countries are permitted).

SPECIFICATIONS

Modulation method

OFDM

Speaker input (200 mV ~ 5 V p-p), External Speaker Output,

DC Input Connectors

Speaker Microphone (with PTT)

Others

Force Synchronization Switch

The operator can use the microphone supplied as part of the ARD9000 package, or a microphone of their choice (wired for ARD9000 input). The ARD9000 package includes, modem, microphone, audio cable, rear audio plug (8-pin circular) and manual. The rear panel pin-out of the ARD9000 is to ADONIS standard so that 'off-the-shelf' commercial leads may be employed. A list of leads may be viewed at the following web page (for code number):

http://www.adonis.ne.jp/code.html

Adonis cables may also be obtained from several suppliers in the UK including Martin Lynch & Sons Ltd (http://www.hamradio.co.uk/) and Waters & Stanton (http://www.wsplc.com/) PLC, refer to the Waters & Stanton 2005 catalogue page 47, prices typically range from ?10.95 to ?15.95 inc VAT (I - Icom, K = Kenwood, Y = Yaesu):

D-8MY

Large Modular Yaesu

D-88Y2

8 pin Yaesu plug

IS IT LEGAL?

Yes, the ARD9000 employs an open published digital protocol (Charles Brain G4GUO) per FCC rules. The transmit bandwidth is within the same spectrum as conventional SSB.

CE approval has been achieved and OFCOM has approved the AR9800 for use by Radio Amateurs in the UK from 19 January 2004 under the guidelines of BR68 (open protocol data mode to enhance operation). The same situation applies to the ARD9000.

For further information visit the OFCOM web site on www.ofcom.org.uk (http://www.ofcom.org.uk/)

The data format has been characterised and publicly released as an 'open protocol' on the following web sites:

- www.chbrain.dircon.co.uk/dvhf.html (http://www.chbrain.dircon.co.uk/dvhf.html)
- www.arrl.org/announce/reports-0307/digivoice.pdf (http://www.arrl.org/announce/reports-0307/digivoice.pdf)

The ARD9800 / ARD9000 are already in use in the UK, USA, Japan and most other countries.

Top (http://www.aoruk.com/direct/ard9000.htm#top)

Operating manual & leaflet

Downloads available in Acrobat PDF format:

- ARD9000 operating manual,PDF (1.43MB) (http://www.aoruk.com/direct/pdf/ard9000_manual.pdf)
- ARD9000 sales leaflet (371kb) (http://www.aoruk.com/direct/pdf/ard9000_leaflet.pdf)

A QUICK-START-GUIDE for the ARD9000 has been written by Mike Weiler (DB1JAW) and provided to us (20.09.2005), Mike says "...it might also be of interest for your UK customers .... as I hope. The file is also available thru my homepage: http://db1jaw.de (http://db1jaw.de/)". Click here (http://www.aoruk.com/direct/pdf/ard9k_en.pdf) to download the 164kb PDF file from the UK server.

Operating manual note:
Please note that latest stock of the ARD9000 (Sept'05) now has the operating manual as a CD-ROM PDF file rather than a printed operating manual... remember, it will take some time for dealers stock to rotate (so you may still get a mixture of both manuals for a while). The carton boxes are marked with a red dot next to the serial numbers to signify that the CD-ROM version is included. There is no different in the hardware, but we note that R22 (http://www.aoruk.com/direct/pdf/ard9000_an_buzz.pdf) appears to have been removed during manufacturer (to reduce the potential for audio buzz when using analogue mode).

(http://www.adobe.com/products/acrobat/readstep.html)

Top (http://www.aoruk.com/direct/ard9000.htm#top)

ARD9800 LIAISON WEB SITE (for AR9000 too)
An independent web site has been established to enable like-minded people to compare results and set up transmission schedules (November 2003). Take a look at http://www.rfelectronics.com (http://www.rfelectronics.com/)

Suggested frequencies are:

-
7.169MHz, 7.170MHz, 7.173MHz, 7.176MHz, 7.290 - 7.299MHz

-
14.236MHz USB (noisy in UK), try 14.255MHz USB

-
18.1625 USB

-
21.370MHz USB

There is an informal NET every Saturday and Sunday at 20:00 UTC on 14.236MHz +/- 3kHz USB

A few operators have reported an audio buzz when using the ARD9000 in analogue mode (okay in digital mode), a technical bulletin on the subject may be viewed as a PDF file (433kb) - click here (http://www.aoruk.com/direct/pdf/ard9000_an_buzz.pdf)

Dear Members,

We are pleased to inform you that the Fifth Annual General Meeting

of our Society, The Elections for the Sixth Managing Committee and

The Annual Getogether will be held on 20th November 2005.

Venue : 'S.S. Hall', Garware Club, Wankhede Stadium, 'D' Road

Churchgate, Mumbai - 400 001.

Timing: 4:00 pm to 7:00pm

Agenda for the Meeting.

4:00pm Secretary's Progress Report.

4:15pm Convener's Report of Hamfest India 2004 - Mumbai.

4:30pm Treasurer's Financial Report.

4:45pm Reports from other Members of the Managing Committee

4:55pm Vote by Hand for Term of the next M.C (4 or 16 Months).

5:00pm Voting for Expulsion or Acceptance of VU2IZO as member.

5:15pm Results of voting for VU2IZO's Membership Status.

5:30pm Voting for the Sixth Managing Committee.

5:45pm Any other topic with the permission of the Chairperson.

6:00pm Results of the Election.

6:15pm Snacks & Tea.

You are requested to attend this function and caste your invaluable

Vote and participate in this Annual Getogether (Eye Ball).

The nomination form for the election is enclosed herewith. The Nomination

form must reach us not less then 3 days prior the election (17th Nov 2005)

You may send your nomination form to the society's Secretary's Address:-

Mr.Nilesh Rathod, 803, Sidharth Ganga Towers, Kalyani Nagar, Pune - 411 006.

We sincerely hope that you will join us and make this event successful.

73,

For Mumbai Amateur Radio Society.

Nilesh Rathod. - VU2NLF

Secretary.

Enjoy this Diwali with Y! India Click here

From: Anurag Chugh
Topic: 2847 Message: 2848

what sheer stupidity..
first the guy (the ham) who heard this thing
wasnt supposed to hear that conversation
secondly if he heard it wasnt he not supposed to make it public?
he should have passed on that information to the police..
and anyway police already must have been listening in on the naxals...

WHEN ARE WE GOING TO ACTUALLY FOLLOW THE AMATEUR TELEGRAPH OPERATORS' RULES?
ITS SIMPLE... IN THIS CASE.. DONT FOLLOW THE RULES AND GET KILLED!!

agreed that the naxals were on the same frequency as the ham? or were they?
but whatever happens why make it public? as if there arent enough government monitoring stations not already listening in on the naxals..

Anurag

2849. Membership Status for AGM

Yahoo group: m_a_r_s
Date: 2005-11-08 15:58:34 UTC
From: nilesh rathod
Topic: 2849 Message: 2849

Dear Members,

You are aware that our 5th AGM and elections for the Sixth Managing Committee shall be held on 20th NOV 2005.

Please find listed below Status of our Members for contesting for elections.

These records statement is prepared by me as per data provided by our Treasurer (VU2CBU), Should there be any discrepancy in these records, you may please contact me or the Treasurer immediately.

As per our records only 83 members are eligible for election, mainly due to non payment of Annual fees, according to my calculations about Rs.98,500/- (almost 1 Lakh Rupees) are overdue in fees.

Some members may have been listed under not eligible due to their SWL status, if they have already got there ticket, they may please notify me ASAP.

As per our bye-laws, only a member with a valid membership of our
society for last 12 months and a valid Amateur Radio Licence is eligible to contest for election.

Hence members filing their nomination may please attach copy of their valid Amateur Radio Licence with their nomination form. This will help us in clearing any discrepancy. (it is quite possible that you may have a Amateur Radio licence, but it may have expired and not been renewed) .

After receiving the nomination, their Membership status will be once again be verifed by our treasurer before the election.

From: Parin Gangar
Topic: 2846 Message: 2851

Hello NLF,

Just want to draw your attention towards the "Green Bird" issue which you have missed in the agenda. I believe this is an important issue, which has drawn much of attention and concern in the last year (2004 - 05).

This issue still stand unsolved. We had Arun Singh (VU3AUA) consolidating a list of all those who have paid for these Green Birds.

After that we never heard of him on this issue.

73,
Parin / VU2PIC

2853. Green Birds.

Yahoo group: m_a_r_s
Date: 2005-11-09 13:59:01 UTC
From: nilesh rathod
Topic: 2846 Message: 2853

Hello Parin,

Technically MARS has got nothing to do it.... The M.C during that period had flatly refused to venture into the "green bird affair" ...

Originally it was proposed by me that MARS should invest the money and get these sets... fix them as sell them for Rs.2500/- making Rs.500/- profit for the society.. it was supposed to be a win-win situation, as Members would have got their VHF sets and could have become QRV active on 2 meters and society would also have made some profit...

Fortunately or Unfortunately my proposal was turned down by the committee. Therefore myself and VU2RIO, collected the money from you guys, hoping to get these sets, and fix them with help of our members technically qualified to fix them, we sincerely thought if Delhi Hams & Lucknow Hams can do it, so can MARS hams, Sadly we were wrong in judging the technical skills of our members...

Me and VU2RIO, did all this to help you guys come up on air, without any vested interest... unfortunately this whole thing has back fired... I have to now agree that, the decision taken by the M.C that time was right and I was wrong.

We have been putting mails on the group about the green bird because all concerned person are MARS members, But technically MARS has nothing to do with it... therefore I have not taken the "green bird issue" on the agenda of MARS....

I have repeated said, that the "Green Bird" was always a calculated risk.. everybody knew it... you don't get base station of 2K... MARS did not wanted to risk it.. which was fair and wise dicision...

Frankly I don't understand why these sets are not fixed ? The only logical reason is that people don't care and don't want to put in effort and time...

In any case, MARS is not responsible for these Green Birds,, it is myself and VU2RIO, all you guys may deal in this matter directly with us..

People who have given money in the second lot may deal directly with VU3AUA.

6:00pm Results of the Election.

6:15pm Snacks & Tea.

You are requested to attend this function and caste your invaluable

Vote and participate in this Annual Getogether (Eye Ball).

The nomination form for the election is enclosed herewith. The Nomination

form must reach us not less then 3 days prior the election (17th Nov 2005)

You may send your nomination form to the society's Secretary's Address:-

Mr.Nilesh Rathod, 803, Sidharth Ganga Towers, Kalyani Nagar, Pune - 411 006.

We sincerely hope that you will join us and make this event successful.

73,

For Mumbai Amateur Radio Society.

Nilesh Rathod. - VU2NLF

Secretary.

2854. Re: Green Birds.

Yahoo group: m_a_r_s
Date: 2005-11-10 06:25:48 UTC
From: vu3wjm
Topic: 2846 Message: 2854

Hi!

Arun Singh had sent money for six sets to me @ Rs1500/ each. That is all I have received. I do not even know who all they belong to.

Since my visit to Mumbai is not certain I will be sending these rigs by transport. Will have to organise with people to see that they are handed over to the right person.

As for the earlier lot I can only help those who purchased in putting them on air when I am at Mumbai.

PARTS & SERVICE (http://www.alinco.com/service.shtml)
DEALERS (http://www.alinco.com/dealers.shtml)

DM-330MVE/MVT/MVZ
POWER SUPPLIES OF THE NEXT GENERATION, ENGINEERED WITH ALINCO'S FINEST COMMUNICATION TECHNOLOGY AND PHILOSOPHY

Features of DM-330MV:

- The combination of high-quality space-saving components and high efficiency switching technology made it possible for the DM-330MV to be super-compact and easy to carry for portable operations and still generate a high continuous output !

- Alinco's communication technology has created a patent-pending Noise-Offset circuit to eliminate the pulse-noise of the switching circuit for the customer who demands more.

- Safety protections are also very important. The DM-330MV comes with short circuit protection, a current-limiting system and extreme temperature protection.

- The programmable pre-set voltage function makes the DM-330MV even easier to use. Just store the most frequently used voltage in the memory, and it is constantly ready to go.

- Vast output terminal convenience is just one more benefit of the DM-330MV ! A cigar-plug socket (Max 10A), a set of Max current terminals, and 2 sets of snap-in terminals (Max 5A) are conveniently laid-out and offer numerous variations for its operation.

- A big, highly visible, back-lit Amp/V meter displays the status of the operation for added convenience.

?@

Specifications:

- Input voltage: AC120VAC(MVT) / 220VAC(MVE/MVZ)

- Output voltage : 5 to 15VDC variable

- Output voltage variation: less than 2%

- Protection: short-circuit, Automatic current limiting over 32A(MVT/MVZ), 30A (MVE), over-temperature

- Output current: MVT/MVZ 32A(max), 30A(continuous)
MVE 30A(max), 25A(continuous)

- Ripple: less than 15mVp-p at rated load

- Fuse: 8A

- Meter: single volt/current meter, back-lit

- Size: MVT/MVZ 175(w) x 67(h) x 165(d) mm
MVE 190(w) x 69(h) x 181(d) mm

- Weight: MVT/MVZ approx. 2 Kg MVE approx. 2.3Kg

Dear Friends,

The Pune Repeater is up and operational on 144.400 Mhz + 600Khz...At present it is located any my QTH (VU2NLF at Kalyani Nagar), once it is totally tested for any bugs or glitches. it will be moved to Sighgarh.

I am sure once it is operational at sighgarh, it can be accessed by Amednagar, and Mumbai... We may connect Mumbai - Pune Repeater back to back during the NET times too...

This will allow Pune, Mumbai and Amednagar Hams to work on 2 meters...hope this will help in increasing VHF activity..

Dear Mr Prashant Koli

This is to bring to your notice that name is
reflecting in the list of pending subscription for the
period 2003-04 & 2004-05 even though i have being
making my payments on a regular basis.

Kindly note that I have already paid my subscription
fees for the year 2003-04 on time and for the period
2004-05 i have made the payment during our AGM held on
may 2004.

However during our recent eyeball QSO during the
meeting held at our register office organised by
VU2ZRS it was informed to me that my subscription
cheque for the year 2004-05 was not deposited for some
reason and it requires to be revalidated or give a
fresh cheque, for which i requested to return my old
cheque in order to issue a fresh cheque.

You are requested to bring my 2004-05 subscription
cheque during our AGM meet. I will be bringing a fresh
cheque for the same alongwith with 2005-06
subscription amount.

Kindly check the records for the 2003-04 subscription
and make necessary corrections.

2870. NOMINATIONS OR DISSOLUTION

Yahoo group: m_a_r_s
Date: 2005-11-17 17:34:21 UTC
From: nilesh rathod
Topic: 2870 Message: 2870

Dear Members,

The deadline for submitting your nomination for election was 17th Nov 2005 6pm hours.

I am sorry to inform that we have received only 1 nomination form. We atleast require 7 nominations if not more to form the next Managing Committee.

The most logical reasons why members have not filed their nomination I can think of are as under :-

1. It is quite obvious that most of the members do not want to take up any responsibility, (managing committee = Managing society with commitment)

2. some members want to run the society, take all the decisions on behalf of a dummy managing committee. (remote control operations).

3. They are scared of VU2NLF, (The so called NLF cracking whip), or they simply cannot work with VU2NLF (for what ever their personal reasons maybe).

For Point No.1, I would request members (Specially Founders) to be more responsible and take charge now.

For Point No.2 I would suggest these members to be bold, be responsible and face their success and failures by giving your 100 % best, instead of back seat driving.

For Point NO.3, I have repeatately stating for past 2 years, that I do not wish to continue on the M.C, I have put in my efforts for our society for past 5 years, and I sincerely hope that someone replaces me.

I have repeatately requested all members, who do not like my working or feels that NLF does not give up our Baby (MARS), to take charge and take care of our baby (MARS), I will not stand in your way. I have done my best, may be now you guys can give your best.

After discussing this matter with our Treasurer, I am extending the Nomination date till 19th November 2005, 9PM.

The society needs you now, so please come forward and nominate yourself for the good of our society. Members can still send their nomination to me at the following address:-

Mr. Nilesh Rathod, 803, Sidharth Ganga Towers, Kalyani Nagar, Pune - 411006

If we do not receive the required Nomination (minimum 7), we will have no choice but to exercise article No.33. of our bye-laws and disolve the society.

==========

33. DISSOLUTION.

The provisions of section 13 & 14 of the Indian Societies Registration Act (No.XXI of 1860) as amended and extended to the State of Maharashtra shall apply, should the society seek dissolution. If upon the dissolution of the society there shall remain after the satisfaction or its debts and liabilities
any property whatsoever, the same shall not be paid to or distributed among the members of the society but shall be given over to organisations with comparable purpose according to the decisions of the members or, in default thereof, according to the decision of a competent court.

==========

I am quite sure that members will come forward and file their nominations and avoid the option of article No.33.

73

5:30pm Voting for the Sixth Managing Committee.

5:45pm Any other topic with the permission of the Chairperson.

6:00pm Results of the Election.

6:15pm Snacks & Tea.

2872. RE: [m_a_r_s] NOMINATIONS OR DISSOLUTION

Yahoo group: m_a_r_s
Date: 2005-11-18 02:12:32 UTC
From: sarla sharma
Topic: 2870 Message: 2872

Hi Nilesh,
Please enlighten me about the rules about deciding to dissolve a society.
Is it a Managing Commitee decision or just the Secretary's?
Your email suggests that the decision to dissolve will be taken
automatically if you receive no nominations for elections. So why have the
agm at all? Why incur more expenses?. Just do everything by email.
Your reasons for people not sending nominations are most ridiculous. No one
is scared of you!!
Who are you anyway? And please dont forget, that the society was formed by
a group of people and its not your private property to do what you like with
it!!
Lets meet and decide on this issue rather than listening to your rude
comments and decisions. I think most members want to discuss many issues at
the meeting and I am sure a new commitee will be formed. I suggest that you
dont put such mails till the meeting because it will put off people rather
than encourage them. And that is definitely not good for the society.

2873. what options do we have ????

Yahoo group: m_a_r_s
Date: 2005-11-18 03:35:02 UTC
From: nilesh rathod
Topic: 2870 Message: 2873

Hello Sarla,

It does not take a genius to figure out that if there is no managing committee, the society automatically becomes defunc...

if no one comes forward then as a secretary I have no option but to write to Registerer of Society, asking him to appoint a court receiver to take charge.. in which case it becomes very ugly situation for MARS.

Other option is to close down... and cancel our registeration.

These dicisions have to be taken in the AGM, It is ultimately the decision of the Members, weather they wish to continue or not...So far it appears that the members are not interested,

As far who am I to take the decision is concerned, well I am still the secretary of the society and it is my duty and resposibility to hand over the charge to the next managing commitee by holding proper elections as per our bye-laws.

if I don't receive the nominations it becomes my duty to inform the members about the consequences and options available to us.

The reasons which I mentioned for members not filing are as per my best knowledge, I may have overlooked something... maybe you can enlighten us as to why there are no nominations.

Members cannot wait and watch till the AGM and then file there nominations. The deadlines for nominations was given and now also extended,

I have always believed in productive actions, I strongly believe in providing solutions to problems and not create any problems..

I have mentioned that members are scared to run for election because of VU2NLF, which may be true or not true.. in any case I have made myself clear, so that there is no doubts in their minds and they can peacefully contest for elections. if they are not scared then offcourse they have nothing to worry about and simply ignore me...

As on now it appears, some of the members have decided to just make QRM in the AGM.. well I will be there to answer each any every questions...
No problem,

73
VU2NLF
Secretary - MARS.

sarla sharma <sarla_sharma@...> wrote:
Hi Nilesh,
Please enlighten me about the rules about deciding to dissolve a society.
Is it a Managing Commitee decision or just the Secretary's?

Your email suggests that the decision to dissolve will be taken automatically if you receive no nominations for elections. So why have the agm at all? Why incur more expenses?. Just do everything by email.
Your reasons for people not sending nominations are most ridiculous. No one is scared of you!!
Who are you anyway? And please dont forget, that the society was formed by a group of people and its not your private property to do what you like with it!!
Lets meet and decide on this issue rather than listening to your rude comments and decisions. I think most members want to discuss many issues at the meeting and I am sure a new commitee will be formed. I suggest that you dont put such mails till the meeting because it will put off people rather than encourage them. And that is definitely not good for the society.

2874. AGM

Yahoo group: m_a_r_s
Date: 2005-11-18 06:35:20 UTC
From: sarla sharma
Topic: 1672 Message: 2874

Hi Nilesh,
I am sure you are a righteous person and take your responsibilities very seriously. So it was perfectly ok to read the writing on the wall regarding the survival of MARS and inform the members accordingly. What is obnoxious is you putting your personal opinions and conclusions about members in an e group which belongs to all. There has to be some decorum for that.
As for the causing of QRM at the AGM, hey, even in radio we deal with the qrm and still try to make a contact!!!And what constitutes QRM is a matter of personal opinion. One cant hear what one wants to hear all the time in a group! That is possible only when just one person speaks and the rest just put up with it.
Great that the AGM will take place. It sure will clear the air!!
Sarla

From: Parin Gangar
Topic: 2846 Message: 2882

Dear Nilesh,

Thank you very much for clarifying that "MARS is not responsible for the Green Birds".

Now, lets come to the point directly. You had asked the people who paid for the First Batch of Green Birds to contact VU3AUA. Then VU3AUA even collected the list of all those people with no communication in this regards further. (Not a single mail from him till date on this issue then onwards).

Now, when there is this AGM going to take place you swing back and say that all those who paid the money for the green birds in the first lot should contact you or RIO.

Its fine..No problems. . You said the Green Birds are still lying unfixed coz "The only logical reason is that people don't care and don't want to put in effort and time..."

But, for your information, when people have tried to put in their efforts and time, you have passed the whole buck to them as if they were solely responsible for what they were doing. I know getting Green Birds a Calculated (???) Risk. And so we, those who paid for the sets are the Risk Bearers.

But, instead of just yelling out and telling around that people are not putting in efforts and time, if you could have put a mail mentioning what all has to be done for getting those sets working, it would have helped a lot. Actually people don't know what they have to do. They simply understand that you have got them some junk from the junkyard of Agra and that they are too incapable of even getting it fixed if not ix them themselves.

I understand some of the sets were fixed by VU3WJM during his trip to Mumbai. Where are those sets ?? Have they been distributed?? Some of the sets that were in very bad shape where to be couriered to VU3WJM. Have they been sent??

Subject: [m_a_r_s] Green Birds.

Hello Parin,

Technically MARS has got nothing to do it.... The M.C during that period had flatly refused to venture into the "green bird affair" ...

Originally it was proposed by me that MARS should invest the money and get these sets... fix them as sell them for Rs.2500/- making Rs.500/- profit for the society.. it was supposed to be a win-win situation, as Members would have got their VHF sets and could have

become QRV active on 2 meters and society would also have made some profit...

Fortunately or Unfortunately my proposal was turned down by the committee. Therefore myself and VU2RIO, collected the money from you guys, hoping to get these sets, and fix them with help of our members technically qualified to fix them, we sincerely thought if Delhi Hams & Lucknow Hams can do it, so can MARS hams, Sadly we were wrong in judging the technical skills of our members...

Me and VU2RIO, did all this to help you guys come up on air, without any vested interest... unfortunately this whole thing has back fired... I have to now agree that, the decision taken by the M.C that time was right and I was wrong.

We have been putting mails on the group about the green bird because all concerned person are MARS members, But technically MARS has nothing to do with it... therefore I have not taken the "green bird issue" on the agenda of MARS....

I have repeated said, that the "Green Bird" was always a calculated risk.. everybody knew it... you don't get base station of 2K... MARS did not wanted to risk it.. which was fair and wise dicision...

Frankly I don't understand why these sets are not fixed ? The only logical reason is that people don't care and don't want to put in effort and time...

In any case, MARS is not responsible for these Green Birds,, it is myself and VU2RIO, all you guys may deal in this matter directly with us..

People who have given money in the second lot may deal directly with VU3AUA.

Hello NLF,

Just want to draw your attention towards the "Green Bird" issue which you have missed in the agenda. I believe this is an important issue, which has drawn much of attention and concern in the last year (2004 - 05).

This issue still stand unsolved. We had Arun Singh (VU3AUA) consolidating a list of all those who have paid for these Green Birds.

After that we never heard of him on this issue.

2885. Re: [m_a_r_s] AGM

Yahoo group: m_a_r_s
Date: 2005-11-20 04:05:20 UTC
From: fmpatel
Topic: 1672 Message: 2885

WOW! So right! Look at the analysis!!

Why don't we have more people in the committee like her? She thinks in such an organised manner. Why don't our committee members do the same? We could take a page or two from her book. I hope we have the good fortune of her e-mail comments on the running of the society from time to time to guide us.

Thanks Sarla, who ever you might be

FEO

2888. E.G.M on 8th January 2006. - VU2IZO Expelled.

Yahoo group: m_a_r_s
Date: 2005-11-21 05:39:12 UTC
From: nilesh rathod
Topic: 2888 Message: 2888

Dear Members,

The A.G.M for accounting year 2004-2005 was conducted on 20th Nov 2005. The elections for the M.C for 2005- 2006 were also scheduled to be held at the same time.

Due to poor response in filing the nominations for elections by our members has resulted in postponing the elections.

The members presents at the AGM concluded that we should not wind up the society just yet, one more change may be given to our society and its members to come forward and file their nominations.

Hence it was decided by the General body that a Extraordinary General Meeting shall be held on 8th January 2006, with its sole agenda as elections of the A.G.M

I sincerely hope the members will come forward and file their nominations for the coming elections on 8th January 2006.

The Present committee will continue to hold office till the E.G.M

VU2IZO (mickey) is permanently expelled from our society by the General Body during the AGM.

The detailed minutes of our AGM will be posted shortly by Jayesh Kharwar (VU2ESP) shortly..

73
VU2NLF
Secretary, MARS.

Enjoy this Diwali with Y! India Click here

$19.95 US
The Ham Intelligent Calculator, also called Hamic, is a program designed to simplify a number of calculations commonly used by Hams. It is designed for the Ham radio hobbyist, but may be useful to others as well. Hamic has a simple to use, but powerful graphical interface that allows solving simple circuits such as resistors in series or parallel, or more complex circuits such as L networks or T networks. As well, other calculations such as SWR, reactance, resonant frequency, inductance of an air core coil, and antenna impedance are supported. One of the more powerful features of Hamic is to solve for almost any unknown variable in a circuit; Hamic can even solve L networks without having to use Smith charts. Also, Hamic can easily convert between a number of different units. Once you have finished your work, your calculations can be saved to a worksheet and retrieved later. People interested in working with circuits or antennas should check this program out!

Calculations

Here is a list of the calculations Hamic currently supports:

- Resistors in series or parallel
- Capacitors in series or parallel
- Inductors in series or parallel
- Impedances in series or parallel

- Reactance with capacitors
- Reactance with inductors
- L Networks (2 possible configurations)
- Pi Networks
- T Networks
- SWR calculations
- Unit Conversions
- Length/Distance
- Area
- Volume (Dry)
- Volume (Fluid)
- Weight/Mass

- Wavelength/Frequency Conversions
- Length of a Half-Wave Dipole
- Resonant Frequency
- Inductance of an Air Core Coil
- Antenna Impedance (using Autek RF1 or other instrument)

Screen Shots
Available screen shots:

- Example of solving an L network for Z1 and Z2

Download

Buy Now

The Hamic program is available for download as a 0.74 MB self-extracting installer. It can be downloaded from the Download (http://www.sweetscape.com/download/) page, or by clicking here:

The program will run for 30 days, but after that time, you will need to register the software. Registration is only $19.95 US and can be performed by clicking here:

(http://www.sweetscape.com/download/hamic20.exe)

(http://www.sweetscape.com/register/?hamic)

The following platforms are supported: Windows XP/2000/NT/98/Me.

For more information on how registering works, see our FAQs (http://www.sweetscape.com/support/faqs.html) page.

2890. CONGRATS - SARLA/VU2SWS - DXCC

Yahoo group: m_a_r_s
Date: 2005-11-22 17:52:36 UTC
From: VU2NXM
Topic: 2890 Message: 2890

Congrats Sarlaji,
You are on DXCC list. your certificate of DXCC from ARRL shows,
It was very hard work, honesty on QSL sending/receiving, good QSOs
etc...
CONGRATS ONCE AGAIN FOR CONFIRMING CONTACTS WITH MORE THAN 100
COUNTRIES.
India has very few.. may be below 50 hams out of 30 thousand hams in
VU land.
GOOD JOB.

hi ulhas

QTH of EGM wud depend upon how much money we have in
kitty , and i guess QTH is not much important anymore
its more important to set the house in order first ,
next time insallah we can have AGM in best of places .
And hey do come forward to file your nominations and
also crate some competition for all so that we hve
many candiatates and we are able to choose the best
ones.

Dear NLF ji,

Very very great job indeed. I was off the HAM for a month. Didnot know the things happenings around. It is really a great hard work and fantastic thing for the HAMS.

THE MATHERAN SITE WAS ALSO TESTED !! WHEN THE REAPETER IS COMING UP THERE ?? PSE

WITH my best wishes,
VU2NXM

Dear NXM,

Thank you very much for your appreciations..

About the Matheran Repeater, I am told that TARA is putting it up, hence we shall put up our repeater at Mahabaleshwar or some other suitable site..

hi vu2loc

Nice to read about the famous hams list, but a larger
part of it is misssing , you simply overlooked the
list of memebers of MARS-MUMBAI AMATEUR RADIO SOCIETY.
The most famous ones.

Indeed. GT is well respected all over India. Lots of Rally HAMs I know have a good regard for him.

Mrs. Sarla is an articulate and motivated editor of the Amateur Radio Mag that she puts out regularly. I believe she's also participated in some DX expeditions at the Elephanta Caves.

Some Rally Hams in Kerala and Bangalore also have a good regard for NLF.

There may be others on the list too, but I'm not really aware of them. My apologies if I've missed out anyone.

48TH JAMBOREE ON THE AIR

15TH & 16TH OCTOBER 2005

REPORT

1. SHREE RAM WELFARE HIGH SCHOOL, ANDHERI

HAMs - Sandesh (VU2SXF), Jayesh (VU2ESP), Ivor (VU2IVO), Mukesh (VU2OMV), Arun (VU3AUA), Pravin (VU3PAN) and SWL - Nilesh Dixit.

100 scouts and guides from 5 schools participated in the event i.e from Goregaon, Borivali & Bandra (bmc school). Contact with A47JOTA the only station heard on HF from Muscat, Oman with 59 RST.

2. SUMAN NAGAR HIGH SCHOOL, CHEMBUR

HAMs ☐ Jaiprakash (VU2JPN), Sarla (VU2SWS), Shailesh (VU2LOC), Gubbi (VU2GBI), Andrews (VU2LLM), Ananta (VU3MWH) SWLs ☐ Rohit, Aditya and Shilpa

HF Contact ☐ A47JOTA

VHF Contacts ☐ Sudhir (VU2SVS), Percy (VU2PLE), Zarir (VU2VPQ) and Mahesh (VU2IIA)

235 scouts & guides from 6 schools.

3. SHANTI NAGAR HIGH SCHOOL, MIRA ROAD

HAMs - Sandip (VU2UGO), Shailesh (VU2SFN), Dilip (VU3DGB), Deepak (VU2CDP), Ulhas (VU2UBP), Suren (VU2SFH) and SWL - Vijay

Schools ☐ 2, Scouts ☐ 323, Guides ☐ 161, Cub ☐ 22, Bulbul ☐ 16

HF Contacts ☐ A47JOTA, VU2ARC/SXE, VU2BSG/JOS, VU2RBI

All the three locations were QRV on HF using inverted `V' antennas for 40M, 20M & 15M and on VHF simplex as well as duplex via MARS Repeater.

Thanks to Maharashtra State Bharat Scouts and Guides HQ, WPC Amateur Wing and Mumbai Amateur Radio Society for their cooperation and kind support.

Special thanks to Huzefa (VU2HIT) for getting WPC permission for this event.

Report by Sandip VU2UGO ☐ Event co-ordinator

2902. About Famous Hams list

From: dinesh patel
Topic: 2896 Message: 2902

Dear LOC and MARS members

The list of famous Hams Looks like famous people who were Hams.

Famous Hams list should perhaps begin with W1AW (SK).

If we are serious enough then we should list down those hams and scientists who have contributed in development of Radio and Ham Radio and put on our web site / Groups site.

Dear Friends,
On 26th November Dr. Vijaypat Singhania broke the world record for the highest ever flight in a Hot Air balloon. I was keenly following the flight as it happened literally outside my window. I was up on my terrace overlooking the race course and clicking pictures wildly. I have uploaded some of those pictures on the web. Those interested can visit the following link.

Hi SCQ,

Thanks for the link - the pictures look good to me. In fact I did not know the flight was scheduled and was on my morning walk when I saw the balloon from Kemps Corner (up the road the Prithvi Apts.) and it was reflecting sunlight so it appeared totally white (unlike its actual multicoloured design).

Yes it is a world record indeed though he did not touch his intended 80K ft as mission control asked him to abort after he broke the world record. He landed up in Nasik near Shirdi.

Good show anyways, both VS and SC!

Next time maybe we'll lobby for a repeater under the bucket with VU2MPS (OM Madhupati Singhania) 'pulling some strings'. ;-)

--- In vuhams@yahoogroups.com, "Kusumba S" <mail@k...> wrote:

Hi all,

Hope you are all doing fine.

It gives me immense pleasure in announcing setting up of "Conference Server" for India.

What is Conference Server?

Conference Server is a dedicated server running on a high-end configuration hosted on high bandwidth circuit to connect various radio audio streams and mix them for broadcasting.

Why do we need?

While we are all striving to increase the community of HAM World, we still have many gaps and I feel the conference server can bring all of us together. Conference server connects all the cities together.

How does it work?

Conference server is an extended part of Echo Link network. It can allow the Echo Link stations to connect and run conference / bridge.

What will happen then?

Imagine, you triggering your local repeater in your city which in-turn triggers all the repeaters across the country. You are Heard across the Country! Guess, you have worked out the backend process in your mind by now I think.

Well, still lot needs to be done to make it successful.

What needs to be done?

I invite all the club stations and repeater stations across the country to be able to volunteer and setup following:

A Pentium III class computer with dedicated internet connection (probably one with BSNL broadband or Cable Internet with static IP will work) connected to your repeater. And then, this will get connected to Conference Server in Hyderabad, India. Once this is done, your repeater is now on the network and connected all across. The conference server though has no limitation; I prefer loading about 10 repeaters initially and then increase the load depending on the performance of the same.

You can send me a mail about expressing your interest and we will then help you out to put the things together.

Road Ahead!

As you all remember I was mentioning about www.qrz.in <http://www.qrz.in/> . Ofcourse, I have not received much participation from anyone to work on developing the same, we have started-in with available resources and same should be completed soon. Also, I mentioned about APRS (Automatic Position Reporting System) which is now functional and you can check www.aprs.in <http://www.aprs.in/> , the Indian APRS website and probably click on VU3SPQ now. Once the repeaters are connected, we are working to have your position reported to the APRS server on the same conference network. Ofcourse, efforts are being made for low cost GPS receivers to be made available and be able to connect to VHF in your car using the required circuit. (Just obtained sample and working on the same). Not forgetting, I have announced DX Cluster at www.dxcluster.in <http://www.dxcluster.in/> and I really see not more than single digit number users using the same. I have completed my WAS and major part of DXCC because of it recently.

We are also working on providing you email access over HF radio itself without a Packet radio modem and your email address will be callsign@q... and you can access the same directly from Internet too. The idea is one should be able to access APRS, EMAIL at QRZ.in and DX Cluster using a radio and single connectivity point. So, folks, this is the way ahead. A true convergence of Internet into Ham Radio!

I really need participation and contribution. Probably constitute a Tech committee and Working Committee and drive this whole stuff!

Who is behind this?

Folks, its we all! I would not like to mention any names including mine as this is for every one of us and everyone is part of it. Ofcourse, few individuals who are contributing immensely shall be recognized appropriately. There is no President, Chairman, Director, Vice President etc., here, it is only one and only one the TOP post or RANK available is "HAM". That's it!

So, now please write back.

73's

DE VU3SPQ / Sunny

2913. IC-7000 review

Yahoo group: m_a_r_s
Date: 2005-12-08 18:52:05 UTC
From: Deepak VU2CDP
Topic: 2913 Message: 2913

The ICOM IC-7000

A short review by Fred Lloyd, AA7BQ (founder-QRZ.com)

Since I have the pleasure of being one of the first 100 or so folks in the US to get the new IC-7000 I wanted take an the opportunity to share my initial impressions with the QRZ community.

By now you've probably heard of the radio which some would describe as the successor to the IC-706MKIIG. The comparisons are easy to make at first glance but in many ways it may be more like the IC-756 PRO series radios, or perhaps a bit of both. There's no denying on any account that it's a dynamite package with big league operating features. In this review I'll take a practical look at the radio from an experienced user's point of view. Since I don't have a spectrum analyzer or the types of gear needed to do a scientific review, I'll leave that part of it up to the ARRL labs.

First, a bit about myself. I've been involved in electronics and computers for about 30 years. I've been a ham since 1987 and my first radio was a Kenwood TS-820. Over the years I've owned quite a few different HF rigs including Galaxy's, Swans, plus a variety of modern, solid state rigs including the TS-440, TS-940, TS-850, TS-570, TS-480, IC-706, IC-735, IC-761, IC-765, FT-920, plus a few others that I can't recall at the moment. My favorite radio for look and feel was the IC-765, and for performance it has been a toss up between several of them. Just last week I sold my TS-480SAT (which incidentally was a great radio) as I scraped together the cash (about $1500) to buy the IC-7000.

Now, back to the IC-7000. Let's face it, from a distance it looks exactly like an IC-706 with a color screen. It's about the same size (a little smaller, actually), and has the main tuning knob on the right just like it's older sibling. It also covers HF/50/144/440 just like the IC-706MKIIG. That said, we can stop comparing the two. The '7000 has capabilities and features that only a decade's worth of technology can account for, and performance which will probably put a lot of other radios to shame.

First Impressions
Obviously, the color display is big news. ICOM introduced the first color TFT display in an HF rig with the 756PRO and now with the IC-7800. Yaesu has it in their flagship FT-9000D and Kenwood has, well, nothing. Kenwood is so far behind the technology curve right now that they may well be on the verge of abandoning the amateur radio market.

Unlike most HF radios, the IC-7000's screen is a true video display. The capabilities of the display are not limited to any specific character set or presentation but instead are controlled by the radio's software. It shouldn't be all that surprising really as this type of small-screen presentation has been available for several years now on your typical cell phone at dirt cheap prices.

When I first looked at the 7000, I was a little shocked at the size of the screen. It measures only 2.5 inches diagonal which is noticeably smaller than the IC-706's antique LCD display. Some of the characters are very small, smaller than typical newspaper print. Despite this, however, they are extremely sharp and clear. Not a hint of fuzziness or video artifacts but more like the crisp display of Palm Pilot or cell phone.

Interestingly, the 7000 has a composite video output jack on the rear that can be fed into any standard TV. I saw a Japanese website where someone had mounted one in a car and attached one of those wildly popular 7-inch in-car DVD screens to it. Feeling like I could possibly get an IC-756 PRO III for the cost of a small screen, I hurried down to Fry's Electronics and picked up a 6-inch "headrest monitor" for $123. With it's simple 12 volt hookup and single video connector it was a snap to hook up.

I found the results of the external monitor to be a bit of a disappointment. Since the external video output is analog and not digital (as the 7000's internal screen surely is), there were some video artifacts such as some light ghosting/smearing plus some difficulties setting the color and contrast. The biggest shock, however, was the loss of apparent detail. The resolution of the internal screen is very small, perhaps on the order of 320x160 (actual numbers not yet known), and when they're blown up onto a larger screen, the characters look a bit choppy and staircased.

Wondering if this was a product of the cheap 6 inch external display, I then hooked up the 7000's video output to a regular 20" television set. The results were the same except that there was some horizontal overscan. Fortunately, there was a menu setting that corrected the overscan, a nice touch from ICOM.

For the past two days I've been using just the built in 2.5 inch screen and have left the external display disconnected. I'm happy to report that my initial fears were unfounded. Due to the uncompromizing clarity of the little screen, I'm having no real trouble reading it even with my 52 year old eyes and bifocal lenses. I can say that I'm happy with it as-is. Forget the external display except when your vision is very bad, or, you're looking to show off the radio to a crowd.

Ever since the radio debuted in Dayton 2005, we've all been told of it's ability to receive and display standard broadcast TV. We've seen pictures of it doing this in Japan. Lo and behold, however, the FCC nixed the idea and when the final approval was granted, it was minus

the TV receive capability. Rumor has it that this will be restorable via a diode mod but so far nobody has spilled the beans on it. The mods website www.mods.dk has been listing an extended receive mod for the IC-7000 for about a month now but there is no description at all as to what exactly the mod accomplishes. I elected not to do the mod from www.mods.dk lacking more info and waiting to hear from others who may be braver than me.

Perhaps the "extended receive" mod makes the radio work in the 200-400 mhz range, which is completely blocked out for some unexplained reason. TV audio can be heard in the low band (54-88 mhz) and part of the high band (175-199 mhz) using the wideband FM mode. You can hear the video as well so its clear that at least the lower 13 channels should be receivable.

To be fair, broadcast TV reception is a gee-whiz feature that doesn't have a lot to do with ham radio, except perhaps for a few isolated cases. The same can't be said for ATV, however, and there doesn't seem to be a good reason why it was disabled too. The FCC's rationale for inhibiting TV was based on the perceived danger of people watching it while driving their cars. Sure, it could happen, I suppose, but that idea sure hasn't stopped the raft of in-dash CD/DVD players with the flip-up screens that the consumer world so enjoys. Sure, there are state laws which prohibit its use, but it doesn't prohibit the manufacturers from selling car stereo equipment that has this capability. Why do they think hams are any less responsible? I suppose they do it because they can, and because unlike mass consumers, we're subservient to their wishes.

The Out of Box Experience (a.k.a. the OOBE)
Unpacking and hooking up the radio was a no-brainer with no surprises. Two things I noted about the rear were that first, there are two antenna connectors, one labeled Ant-1 and the other, not surprisingly, Ant-2. To me, this meant that the system had an A/B antenna switching capability, much like my TS-480 had. Not so. Although it's not marked on the unit, Ant-1 is for HF (160 thru 6 meters) and Ant-2 is for VHF (54 mhz) and above. The other oddity was that there are four 3.5 mm accessory jacks on the back, none of which are labeled! After holding the radio up to the light for several moments I finally noticed that there is a label on the bottom of the unit that identifies the mystery holes as well as the serial number and FCC ID of the unit.

That said, I think that I was able to get "basic" functionality out of the unit before I cracked open the 150+ page manual but had I insisted on sticking with that strategy I would have missed a great deal of what the rig had to offer.

Speaking of the manual, my first recommendation is to go to the ICOM website and download the PDF version. With the newest free Adobe reader, you can search the entire manual for key words which is much faster than endless thumbing back and forth looking for subjects of

interest.

The second thing about the manual that I find odd is that unlike most rigs, this one comes without a schematic. There is not one shred of info about the internal workings of the radio, something that at least Kenwood gives with every rig. I can't remember if the other ICOM rigs include a schematic but one would have been nice to have with this one. I suppose I'll have to wait for the service manual to come out in order to get a peek.

Immediately upon unpacking the unit I took notice of its weight. There's a lot of stuff packed in this little box and it has the kind of heft that folks used to use to judge cameras. Good, expensive ones were always heavier than the cheap, plastic imitations. This box feels like a solid brick which gave me the warm satisfying feeling that it might well be worth the $1500 that I paid for it.

So just how packed is it? Well, for starters, there aren't any options, none. Filters? None. TCXO? Built-in. Speech synthesizer? Built-in. Voice recorder? Built-in. Memory keyer? Built-in. This is a fully loaded rig containing all the desirable options right from the factory. I like it. On my TS-480 I suffered the indignity of adding the voice recorder/speech synthesizer option which cost too much money. It was especially frustrating to note that the option was about the size of a postage stamp and it contained one big integrated circuit and a connector. Kudos to ICOM for doing away with this insulting practice and for raising the bar on minimum transceiver standards by including the $2 chip right on the motherboard!

Getting My Feet Wet
Turning on the new radio, you first see the ICOM logo and then a notice that RF power is set at 100%. The initial operating frequency is 14.100 mhz, USB. A turn of the knob and yep, there's activity on the band. Being a technocrat, however, I wanted to see what the radio would DO, not what was happening on the bands so I started wildly pushing buttons and flipping through menus. Wow! What an assortment of things to look at. It's hard to begin and impossible to recall exactly which buttons I pressed in what order except to say that I spent a good 30 minutes just marveling over it.

The total number of features is hard to describe. Needless to say, most front panel buttons have multiple, context sensitive functions and some use abbreviations that aren't immediately apparent. It was beginning to look like some manual reading would be in my future.

A really big discovery was the microphone. It's not your typical mic as it has 25 buttons not including the PTT switch. It is most useful in that it gives you one-button access to a lot of features that take multiple presses on the radio's front panel. I really like the one button band selectors, the quick access to the Filter menu, and the two programmable buttons that can be set to do whatever. I can imagine that some enterprising soul will invent an external control panel that

duplicates these features. This would be especially true for base station use where a different microphone (having no buttons) might be connected.

The basic menu idea follows what has become a standard of sorts in a lot of rigs lately. If a button has a label, pressing it activates that function. Press and hold the same button and you're taken to a menu where you can adjust the feature. While this strategy isn't necessarily followed on all functions, it is the basic idea and one that helps you understand what to expect when pushing buttons. Don't worry, if you're wrong or if the button has no meaning in the current mode context, the radio will issue a beep sound and nothing happens.

An example of this is the mode button. Each time you press it the operating mode changes to the next mode, for example CW -> RTTY -> FM -> LSB. If LSB is currently selected, pressing and holding it changes to USB. If FM is selected, pressing and holding changes to AM, or to WFM (wideband FM). It's not that different from a lot of other radios and easy enough to get used to. One button is oddly labeled in my opinion. The legend says P.AMP which without thinking reminded me of Power Amp. Actually, it's the receiver preamp button. I would have labeled it PRE instead. Press once to engage the preamp, hold it down for 1 second and it engages the Attenuator.

The DSP functions are some of the best I've ever seen. The radio has two DSP chips but the documentation doesn't indicate how their tasks are divided. One can only guess that perhaps one is for transmit and one for receive, but until someone sees a block diagram, no one will know. There are four noise reduction features: a Noise Blanker (NB), a Noise Reducer (NR), a Manual Notch Filter (MNF), and an Automatic Notch Filter (ANF).

NB is the typical ignition-type noise blanker. It was hard to find a test signal but I could tell it was engaged when I listened to the 80 meter band. Like all of the DSP features, this one is adjustable by holding down the NB button for more than one second. A pop-up window will show the current level and you use the main tuning knob to adjust. The NR is great, and it is also adjustable. It really improves 80 meter operations. The MNF is a really useful feature. It is actually a dual notch filter and when it is engaged you have two independently adjustable notches. Adjusting them is easy with a little graphic that slides left and right across a small scale. The ANF is the automatic notch and it works well to suppress heterodynes. It is not enabled in CW mode, where the MNF is typically used.

The DSP is also responsible for an elaborate dual passband filter with adjustable width and center frequency. Adjusting it is similar to the IC-756PRO and it gives a nice graphic to see the two pass bands. The two bands are represented by graphics that have different colors and a third color shows the intersection of the two. For SSB the pass band filters have three default settings of 3.6 khz, 2.4 khz, and 1.8 khz,

all of which sound good. By pressing a button, you can customize any of these three filters to be as wide as 3.6 khz all the way down to 50 hz. Cool. The available filter widths vary by operating mode to values that are sensible for that mode. There is also a SOFT/SHARP selection for each filter that selects the filter shape. My gut feeling is that we won't be missing crystal filters with all of this adjustability.

The radio has a nice RTTY decoder function with a built-in waterfall display. I've never seen an easier RTTY decoder to operate. The waterfall shows up in blue and makes for a pleasing presentation. This isn't a feature that is immediately obvious, however, and one that I had to crack the manual to figure out how to use. One comment about it, however, is that it is receive-only. In other words, it has no built-in tone generator (which would have been easy) and no way to send RTTY except by using a traditional external source. RTTY can be sent either FSK or AFSK and the manual documents the hookups well.

A lot of us get really excited about the notion of a band scope. The scope on the IC-756 PROIII is a prime example, and the scope on the IC-7800 is legendary having a dedicated DSP unit just for that function. The IC-7000's band scope is nice but it won't compare to either of its big brothers. The reason has to do with the fact that a) there isn't a lot of space on the screen to display it and b) it doesn't have a dedicated DSP chip. When you're using it, the audio cuts out with the regularity of a square wave as the chip samples the IF stream. The sampling speed is adjustable, i.e. FAST and SLOW, and in the slow mode you can still understand what folks are saying. In the FAST mode, you pretty much give up receive while it updates the display. Still, it's pretty usable and the adjustable bandwidths are nice. It's also easy to tune to a peak to see what's really happening around you.

The CW keyer is pretty fabulous too. It stores up to 4 messages and has an auto increment feature for contests. To program a message, you turn the main dial to select characters to send. Oddly, however, there is no CW decoder which should have been a no-brainer with the on board DSP.

The radio has more memory channels than I will ever use, and I suspect few will exhaust it. A super cool feature is the ability to tag every memory location with a name, and a scrollable list to choose from them.

Room for Improvement
Despite my unabashed love for this new radio, I can still find a few areas where the rig could be made even more spectacular: First, it's time for the manufacturers to jump on the USB bandwagon. The interface circuitry for USB is very cheap and there should be no reason that it cannot be added to the typical rig. There is so much that could be

done with USB 2.0 including full audio I/O, remote control, accessories, and more. CV-I is nothing more than old fashioned serial data converted from RS-232 to 5V TTL. Stick a fork in this protocol because it's done. In addition, how about Bluetooth? Wouldn't it be cool to attach a wireless Bluetooth keyboard or headset to the unit?

The ability to send CW and RTTY via a keyboard would have been an easy add-on if USB had been implemented. The processing power is certainly there.

Finally, there's the clock. I like the little time display but am left wondering why ICOM went through all the trouble to include a 2nd clock with offset from Clock 1 when only one of the two clocks can be displayed at any time. It would have been nice to see both clocks on the display, such as local and UTC. As it is, its one or the other.

ICOM makes two separation cables for this unit, which are new part numbers for this radio. One is 3M and one is 5M in length. Both are outrageously expensive (About $80) and the 5M wire costs $20 more than the 3M wire. Why? I can't help but feel that I'm being raked over the coals on this inconsequential part. To top it off, the connector is so unique that there's virtually no possibility that an after-market third party offering will emerge. Hat's off to Kenwood on their TS-480 for using standard RJxx connectors in this area. To be fair to ICOM, an RJ-45 wouldn't have worked because the radio needs 10 contacts instead of the 8 afforded by the wildly popular telephone/ethernet/microphone connector.

The main tuning knob has a detent lever much like the IC-706 that is used to adjust the drag feel. There are 4 settings, Channel, hard, medium, and no drag. My complaint here is that the lever is difficult to move and the detent's aren't as positive as they should be.

The Tune button doesn't work for my tuner, the SGC-230. ICOM wants me to buy their inferior AH-2 or AH-4 which I don't care for. I suppose I'll have to get one of those little plugs that some guys are selling on eBay to trick the radio into thinking an ICOM tuner is attached. All I need is a few watts of CW out while I'm pushing the button. Of course, whistling into the microphone will do it too, but I can't help but feel like a CB'er when I do this. For that reason I usually end up switching to CW or RTTY for my tune ups, even though I could just key up and start talking, as the SGC can handle it.

More to Come
I don't yet have a VHF/UHF antenna setup but there's a brand new Diamond dual band stick in my garage. I'm looking forward to trying it out on both FM and sideband, realizing the limitations of not using a Yagi. Still, I expect to have a lot of fun once I get the antenna up on the roof. Speaking of antennas, my HF setup includes an SGC-230 at the end of about 100' of 9913 coax. This the tuner feeds a 100 foot wire that is about 25 feed above the ground at its highest point. I'm able to tune everything from 160 through 10 meters with this, and the

noise level is pretty decent. I don't miss not having an internal automatic antenna tuner and for my money, and external remote tuner is the best in nearly every longwire situation.

Having only owned the radio for 4 days, and not having as much time to spend as I'd wish, I have just barely cracked the surface of what it's capable of doing. I hope to have more to report in the coming weeks.

The Bottom Line
This is one of the most exciting radios I've come across in a while. It delivers performance and features like none other that I've owned. It would be very interesting to see how it competes with the IC-756 PRO III, or the IC-746 PRO. Without the test equipment to prove it, I have a gut feeling that it's going to hold its own in most areas, and surpass in some others.

ICOM should do well with this radio and they have clearly set the new standard for features and usability across a broad product range. Kenwood is left the farthest back in the dust with no top end radio and only a mediocre midrange rig (the TS-2000). Yaesu is doing quite well with the FT-9000D but they seriously need to produce a competitor to the IC-756 if they're going to expand their market share. Ths FT1000MP MKV Field is nice, but it doesn't get really nice until you pump a boatload of expensive filters into it. Ditto for the MKV as well. Until Yaesu and Kenwood really jump into the LCD digital display and DSP arena like ICOM has done, they're going to stay in second and third place in the mainstream radio technology race. ICOM clearly wins this round and they are the force to be reckoned with.

Dear radio friends of MARS

Following is the story less known but major contributor in radio revolution.
This page was recd from eham.net

LOCAL NEWS

Remembering a forgotten radio pioneer: Marshfield to mark anniversary of historic broadcast
By SHAMUS McGILLICUDDY
The Patriot Ledger
He is the forgotten pioneer. Yet anyone who has ever tuned a radio dial has experienced Reginald Aubrey Fessenden?s legacy.
A Canadian-born scientist and inventor, Fessenden is said to be the first man to make a radio broadcast.
And he made that broadcast from Marshfield.
??People first envisioned radio as a way of communicating, - point to point communications,?? said Edward Perry, owner of Marshfield radio station WATD.
??What Fessenden did was he demonstrated that you could entertain people with it.??
??He?s a forgotten hero,?? said Dave Riley of Marshfield, a ham - or amateur - radio enthusiast. ??He gave us most of what we have today (in radio).??
Next month begins the 100th anniversary of one of the most important years in radio and communications history.
Fessenden?s legacy in Marshfield began in 1905 when he and his associates came to Brant Rock and built a 400-foot radio tower in what is today the Blackman?s Point trailer park and campground. He arranged the construction of a second tower in Macrihanish, Scotland.
The towers were completed within a few months, and on Jan. 2, 1906, Fessenden recorded his first historic moment. He made the first two-way radio communication across the Atlantic Ocean by transmitting Morse code signals between Marshfield and Scotland, and by the end of that year, used radio waves to broadcast music.
Now, 100 years later, people in Marshfield are preparing to celebrate the anniversary of Fessenden?s pioneering year of radio in Marshfield.
Riley and several other locals have restored the masonry base of Fessenden?s radio tower, which was torn down in 1912.
They have a dedication planned at the tower?s base in Blackman?s Point at 1 p.m. on Saturday.
And on Jan. 2, Riley and hundreds of other ham radio operators across the world will transmit Morse code signals to each other to mark the anniversary of the first two-way transatlantic communication. Specifically, he will send

a message to radio enthusiasts gathered in Macrihanish.
Others in town are talking about a summer celebration to mark the year.
Perry and Robert Demers of the Marshfield Historical Society said the town will form a committee to plan an event.
Until that two-way radio transmission on Jan. 2, the signals had been sent only one-way by Guglielmo Marconi.
Fessenden continued to experiment with radio throughout the year. In November, while sending Morse code signals to Scotland, he accidentally transmitted his voice as well, becoming the first person to transmit voice across the Atlantic.
But late in 1906 a storm destroyed the tower in Scotland.
Riley said this dashed the hopes of Fessenden?s fledgling company, the National Electric Signaling Company, which intended to sell his technology based on demonstrations of the two-way communication.
Then Fessenden decided to try something else.
U.S. Navy vessels and ships of the United Fruit Company had been equipped with radio equipment Fessenden had built. The equipment had been used only for point-to-point Morse code communications.
The day before Christmas Eve 1906, Fessenden sent a message to those ships, telling them to listen for a message on Christmas Eve.
They were surprised when they heard Fessenden?s voice.
??All the shipboard operators were astonished when they heard this coming over their radio instead of the beep beep beep (of Morse code),?? Perry said.
Fessenden began his legendary broadcast with a brief introduction about what he planned to do. Then he played a phonograph record of George Frideric Handel?s ??Largo.?? He followed that with his own violin solo, playing ??O Holy Night.??
He read some passages from the Bible, wished his listeners a merry Christmas and signed off for the evening.
Ships reported hearing him up and down the Atlantic coast, as far south as the Caribbean.
Perry said Fessenden?s broadcast was historic.
??We think it was Fessenden that laid the groundwork for radio to become a broadcast medium rather than point-to-point communication. We see him as the founder of entertainment radio communications.??
Perry said it took another 15 years for the radio entertainment industry to get going with the country?s first commercial radio station, KDK in Pittsburgh.
??But Fessenden was at the beginning of this thing,?? Perry said.
Unfortunately, Fessenden?s Pittsburgh-based investors were not interested in transmitting voices and music.
As the radio entertainment industry exploded in the 1920s, Fessenden?s legacy was forgotten.
It wasn?t until 1928 that he won $500,000 in a lawsuit over some of the patents he had lost to his investors.
Riley said he wants to mark the centennial because he hopes Fessenden?s inventiveness will inspire other aspiring technological pioneers in the area. He also wants Fessenden to get the credit he is due. Many historians remember Marconi has the father of radio.

??He never really got the credit I think he deserves,?? Demers agreed.

Subject: [m_a_r_s] Enter our 'Free Competition' and you could winIcom'sbrand-new IC-V82

Dear OM/YL,

The good folk at Icom-UK are offering Southgate website readers the chance to win one of Icom's latest handheld transceivers - the Icom IC-V82 - a high-power handheld with digital capabilities - absolutely free!
Icom-UK Ltd are offering this prize exclusively to SARC website readers

• Learn more about this amazing new transceiver
• View the IC-V82's impressive specifications

Here's all you have to do to enter..

Just tell us:
What is the Callsign of the Special Event Station that Icom will be sponsoring in October?

Need a clue?
You'll find the answer on the Icom-UK website.

You may make one entry per person, per day.
The competition closes on January 4, 2006.
The winner will be announced shortly afterward

Dear Mars Friends

Following is an article on feedline energy from eham.net

If interested take good printout and read it with fresh mind.

Dinesh Patel

A Feedline Energy Analysis
Cecil A. Moore (W5DXP) on December 12, 2005
View comments about this article!
First published in WorldRadio, Oct. 2005, and reproduced with permission.
An Energy Analysis at an Impedance Discontinuity in an RF Transmission Line, Part I
Where Does the Power Go? [1] There continue to be many differing responses to the question within the amateur radio community and, so far, no one has presented the facts of the physics of power as understood from the field of optics. Those facts from optics have been known and understood for decades and are consistent with the laws of physics and the equations governing the behavior of RF transmission lines. Light and RF waves are both composed of electromagnetic energy. Most of the following information comes from "Optics" [2]. In the field of optics, irradiance is the same thing as power in an RF transmission line if the cross sectional area of the transmission line is taken into account. Irradiance has the dimensions of energy per unit area per unit time. If the light beam of a particular laser occupies the same cross sectional area as a particular coaxial RF transmission line then the irradiance of the laser beam is comparable to the RF power in the transmission line. The 1/4 wavelength thin-film deposited on glass to obtain a non-reflective surface performs in a virtually identical way to a 1/4 wavelength series matching section in a transmission line. Single-source RF energy in a transmission line and laser light are both coherent electromagnetic energy waves that obey the laws of superposition, interference, conservation of energy, and conservation of momentum.
My Historical Perspective
My first memories of the answer to "Where does the power go?" are articles published in QST written by Walter Maxwell, W2DU, some quarter of a century ago. Mr. Maxwell later compiled the information into a book titled, "Reflections", which quickly became the bible for Amateur Radio applications involving stub matching, transmission lines, and forward and reflected energy flow. Mr. Maxwell coined the terms, "virtual short" and "virtual open", as a shorthand description of what rearward-traveling reflected energy encounters at a match point in a transmission line resulting in 100% re-reflection. He also explained the function of destructive wave interference and constructive wave interference in achieving a match point on a transmission line [8] which is what a large part of this article is about.

Sometime after the publication of Reflections, some people questioned the validity of Mr. Maxwell's concepts. In particular, Dr. Steven Best, VE9SRB, took Mr. Maxwell to task in a series of articles published in QEX [3]. Simply put, Dr. Best disagreed with Mr. Maxwell that reflected power is 100% re-reflected in a matched system. Before publication of his Part 3 QEX article, Dr. Best sent up trial balloons for his ideas on the usenet newsgroup, rec.radio.amateur.antenna. My opinion was that Dr. Best's future article contained numerous errors which were pointed out to him. However, the article as published still contained the alleged errors. My determination to resolve the conflicts between the concepts presented by Walter Maxwell and the ones presented by Dr. Best culminated in this present article. The conclusions will be presented first with the technical details to follow in Part II and Part III.

In a nutshell, Walter Maxwell's "virtual short" is a two step process. The reflected wave from the load encounters the impedance discontinuity at the match point. A re-reflection occurs that equals the incident reflected power multiplied by the power reflection coefficient at the match point (the square of the voltage reflection coefficient). This re-reflected energy joins the forward wave traveling toward the load. That first energy re-reflection is not the only energy that joins the forward wave. That fact is what Dr. Best missed in his article. Interference of any kind was never mentioned in Dr. Best's QEX article.

The part of the reflected wave that is not re-reflected is transmitted back through the impedance discontinuity at the match point and attempts to flow toward the source. We know the reflected energy doesn't make it to the source in a matched system, so where does it go? The answer is mentioned in "Reflections II" [8]. What Mr. Maxwell is describing is wave cancellation due to total destructive interference between two reflected waves. The first wave is the part of the source forward wave that is initially reflected back toward the source from the match point. The second wave is the part of the reflected wave from the load that is transmitted through the match point toward the source. These waves are equal in magnitude and opposite in phase so, as Mr. Maxwell asserts in Reflections II, they cancel to zero at the match point thus eliminating reflections between the match point and the source.. The canceling of these two waves to zero is the second step in Mr. Maxwell's virtual short process of 100% reflection.

Voltages can cancel and currents can cancel but energy cannot cancel. What happens to the energy that existed in the waves before they were cancelled? Since we know that all the energy in a matched system winds up flowing toward the load, the answer is a no-brainer. There are only two directions in a transmission line. If energy that was previously flowing toward the source isn't flowing toward the source anymore, it must necessarily be flowing toward the load. The conclusion is inescapable. Not only is 100% of the reflected energy re-reflected at the match point, but wave cancellation is the cause of part of that re-reflection. This is a well understood phenomenon in the field of optics [9] but not well understood in the field of RF engineering.

An RF engineer will usually say there are three things that can cause 100% reflection. Those are a short-circuit, an open-circuit, or a purely reactive impedance. This is true at a load. But at an impedance discontinuity with

waves incident from both directions, to that list of three, we can add a fourth, namely wave cancellation due to total destructive interference. In general:

The destructive interference energy resulting from wave cancellation at an impedance discontinuity becomes an equal magnitude of constructive interference in the opposite direction. Since there are only two directions in a transmission line, wave cancellation is the equivalent of an energy reflection. 100% wave cancellation means 100% energy reflection. [9]

References are included in this Part I of the series and will not be repeated in Parts II and III. In Part II, the general case qualitative analysis will be presented.

I would like to thank Mr. Robert E. Lay, W9DMK, for his substantial contributions to this article.

[4] "Interference term", "Optics", Eugene Hecht, Fourth Edition

Section 7.1 The Addition of Waves of the Same Frequency It follows ... that the resultant flux density is not simply the sum of the component flux densities; there is an additional contribution 2*E01*E02*cos(a2-a1), known as the interference term. ("a" replaces the Greek letter Alpha and INTERFERENCE TERM is emphasized.)

Section 9.1 General Considerations

The 'interference term' becomes I12 = 2*SQRT[(I1)(I2)]*cos(s) [where I is irradiance (power)] ('SQRT' replaces the square root sign and "s" replaces the Greek letter Sigma.)

[5] "S-Parameter Techniques", Hewlett Packard Application Note 95-1, available on the web. The S-Parameter normalized voltage equations are:

b1 = (s11)(a1) + (s12)(a2) and b2 = (s21)(a1) + (s22)(a2)

The squares of all those terms are related to power as explained in the application note. It is left as an exercise for the reader to square both sides of both equations above and observe that the resulting equations contain the interference term that agrees with Eq 1 and Eq 2 in the body of this paper.

[6] "Optics", Eugene Hecht, Fourth Edition

Section 3.3 Energy and Momentum, "One of the most significant properties of the electromagnetic wave is that it transports energy and momentum." [Note from W5DXP: Energy and momentum must be conserved. The direction of the energy and momentum associated with reflected waves must be reversed for a match to occur.]

Section 4.11 Photons, Waves and Probability, "The principle of conservation of energy makes it clear that if there is constructive interference at one point, the 'extra' energy at that location must have come from somewhere else. There must therefore be destructive interference somewhere else. "If two or more electromagnetic waves arrive at point P out-of-phase and cancel, 'What does that mean as far as their energy is concerned?' Energy can be distributed, but it doesn't cancel out."

Section 7.1 The Addition of Waves of the Same Frequency, "The superposition of coherent waves generally has the effect of altering the spatial distribution of the energy but not the total amount (of energy) present."
[7] "Optics", Eugene Hecht, Fourth Edition
Section 9.1 General Considerations, "A maximum irradiance (power) is obtained when cos(s) = 1. ... In this case of total constructive interference, the phase difference between the two waves is an integer multiple of 2*Pi, and the disturbances are in-phase. ... A minimum irradiance (power) results when the waves are 180 degrees out-of-phase, ... cos(s) = -1, ... and is referred to as total destructive interference." ("s" replaces the Greek letter Sigma and TOTAL DESTRUCTIVE INTERFERENCE is emphasized.)
[8] Maxwell, Walter, "Reflections II", (c) 2001 Worldradio Books, ISBN 0-9705206-0-3 page 4-3, "The destructive wave interference between these two complementary waves ... causes a complete cancellation of energy flow in the direction toward the generator. Conversely, the constructive wave interference produces an energy maximum in the direction toward the load, ..." page 23-9, "Consequently, all corresponding voltage and current phasors are 180 degrees out of phase at the matching point. ... With equal magnitudes and opposite phase at the same point (point A, the matching point), the sum of the two (reflected) waves is zero."
[9] Quotes from two web pages from the field of optical engineering:
www.mellesgriot.com/products/optics/oc_2_1.htm
"Clearly, if the wavelength of the incident light and the thickness of the film are such that a phase difference exists between reflections of p, then reflected wavefronts interfere destructively, and overall reflected intensity is a minimum. If the two reflections are of equal amplitude, then this amplitude (and hence intensity) minimum will be zero." (Referring to 1/4 wavelength thin films.)
"In the absence of absorption or scatter, the principle of conservation of energy indicates all 'lost' reflected intensity will appear as enhanced intensity in the transmitted beam. The sum of the reflected and transmitted beam intensities is always equal to the incident intensity. This important fact has been confirmed experimentally."
http://micro.magnet.fsu.edu/primer/java/scienceopticsu/interference/waveinteractions/index.html
"... when two waves of equal amplitude and wavelength that are 180-degrees ... out of phase with each other meet, they are not actually annihilated, ... All of the photon energy present in these waves must somehow be recovered or redistributed in a new direction, according to the law of energy conservation ... Instead, upon meeting, the photons are redistributed to regions that permit constructive interference, so the effect should be considered as a redistribution of light waves and photon energy rather than the spontaneous construction or destruction of light."
Note from W5DXP: In an RF transmission line, since there are only two possible directions, the only "regions that permit constructive interference" at an impedance discontinuity is the opposite direction from the direction of destructive interference.

An Energy Analysis at an Impedance Discontinuity in an RF Transmission Line, Part I
Where Does the Power Go? [1] There continue to be many differing responses to the question within the amateur radio community and, so far, no one has presented the facts of the physics of power as understood from the field of optics. Those facts from optics have been known and understood for decades and are consistent with the laws of physics and the equations governing the behavior of RF transmission lines. Light and RF waves are both composed of electromagnetic energy. Most of the following information comes from "Optics" [2]. In the field of optics, irradiance is the same thing as power in an RF transmission line if the cross sectional area of the transmission line is taken into account. Irradiance has the dimensions of energy per unit area per unit time. If the light beam of a particular laser occupies the same cross sectional area as a particular coaxial RF transmission line then the irradiance of the laser beam is comparable to the RF power in the transmission line. The 1/4 wavelength thin-film deposited on glass to obtain a non-reflective surface performs in a virtually identical way to a 1/4 wavelength series matching section in a transmission line. Single-source RF energy in a transmission line and laser light are both coherent electromagnetic energy waves that obey the laws of superposition, interference, conservation of energy, and conservation of momentum.
My Historical Perspective
My first memories of the answer to "Where does the power go?" are articles published in QST written by Walter Maxwell, W2DU, some quarter of a century ago. Mr. Maxwell later compiled the information into a book titled, "Reflections", which quickly became the bible for Amateur Radio applications involving stub matching, transmission lines, and forward and reflected energy flow. Mr. Maxwell coined the terms, "virtual short" and "virtual open", as a shorthand description of what rearward-traveling reflected energy encounters at a match point in a transmission line resulting in 100% re-reflection. He also explained the function of destructive wave interference and constructive wave interference in achieving a match point

on a transmission line [8] which is what a large part of this article is about.

Sometime after the publication of Reflections, some people questioned the validity of Mr. Maxwell's concepts. In particular, Dr. Steven Best, VE9SRB, took Mr. Maxwell to task in a series of articles published in QEX [3]. Simply put, Dr. Best disagreed with Mr. Maxwell that reflected power is 100% re-reflected in a matched system. Before publication of his Part 3 QEX article, Dr. Best sent up trial balloons for his ideas on the usenet newsgroup, rec.radio.amateur.antenna. My opinion was that Dr. Best's future article contained numerous errors which were pointed out to him. However, the article as published still contained the alleged errors. My determination to resolve the conflicts between the concepts presented by Walter Maxwell and the ones presented by Dr. Best culminated in this present article. The conclusions will be presented first with the technical details to follow in Part II and Part III.

In a nutshell, Walter Maxwell's "virtual short" is a two step process. The reflected wave from the load encounters the impedance discontinuity at the match point. A re-reflection occurs that equals the incident reflected power multiplied by the power reflection coefficient at the match point (the square of the voltage reflection coefficient). This re-reflected energy joins the forward wave traveling toward the load. That first energy re-reflection is not the only energy that joins the forward wave. That fact is what Dr. Best missed in his article. Interference of any kind was never mentioned in Dr. Best's QEX article.

The part of the reflected wave that is not re-reflected is transmitted back through the impedance discontinuity at the match point and attempts to flow toward the source. We know the reflected energy doesn't make it to the source in a matched system, so where does it go? The answer is mentioned in "Reflections II" [8]. What Mr. Maxwell is describing is wave cancellation due to total destructive interference between two reflected waves. The first wave is the part of the source forward wave that is initially reflected back toward the source from the match point. The second wave is the part of the reflected wave from the load that is transmitted through the match point toward the source. These waves are equal in magnitude and opposite in phase so, as Mr. Maxwell asserts in Reflections II, they cancel to zero at the match point thus eliminating reflections between the match point and the source.. The canceling of these two waves to zero is the second step in Mr. Maxwell's virtual short process of 100% reflection.

Voltages can cancel and currents can cancel but energy cannot cancel. What happens to the energy that existed in the waves before they were cancelled? Since we know that all the energy in a matched system winds up flowing toward the load, the answer is a no-brainer. There are only two directions in a transmission line. If energy that was previously flowing toward the source isn't flowing toward the source anymore, it must necessarily be flowing toward the load. The conclusion is inescapable. Not only is 100% of the reflected energy re-reflected at the match point, but wave cancellation is the cause of part of that re-reflection. This is a well understood phenomenon in the field of optics [9] but not well understood in the field of RF engineering.

An RF engineer will usually say there are three things that can cause 100%

reflection. Those are a short-circuit, an open-circuit, or a purely reactive impedance. This is true at a load. But at an impedance discontinuity with waves incident from both directions, to that list of three, we can add a fourth, namely wave cancellation due to total destructive interference. In general:

The destructive interference energy resulting from wave cancellation at an impedance discontinuity becomes an equal magnitude of constructive interference in the opposite direction. Since there are only two directions in a transmission line, wave cancellation is the equivalent of an energy reflection. 100% wave cancellation means 100% energy reflection. [9]

References are included in this Part I of the series and will not be repeated in Parts II and III. In Part II, the general case qualitative analysis will be presented.

I would like to thank Mr. Robert E. Lay, W9DMK, for his substantial contributions to this article.

[4] "Interference term", "Optics", Eugene Hecht, Fourth Edition
Section 7.1 The Addition of Waves of the Same Frequency It follows ... that the resultant flux density is not simply the sum of the component flux densities; there is an additional contribution 2*E01*E02*cos(a2-a1), known as the interference term. ("a" replaces the Greek letter Alpha and INTERFERENCE TERM is emphasized.)
Section 9.1 General Considerations
The 'interference term' becomes I12 = 2*SQRT[(I1)(I2)]*cos(s) [where I is irradiance (power)] ('SQRT' replaces the square root sign and "s" replaces the Greek letter Sigma.)

[5] "S-Parameter Techniques", Hewlett Packard Application Note 95-1, available on the web. The S-Parameter normalized voltage equations are:
b1 = (s11)(a1) + (s12)(a2) and b2 = (s21)(a1) + (s22)(a2)
The squares of all those terms are related to power as explained in the application note. It is left as an exercise for the reader to square both sides of both equations above and observe that the resulting equations contain the interference term that agrees with Eq 1 and Eq 2 in the body of this paper.

[6] "Optics", Eugene Hecht, Fourth Edition
Section 3.3 Energy and Momentum, "One of the most significant properties of the electromagnetic wave is that it transports energy and momentum." [Note from W5DXP: Energy and momentum must be conserved. The direction of the energy and momentum associated with reflected waves must be reversed for a match to occur.]
Section 4.11 Photons, Waves and Probability, "The principle of conservation of energy makes it clear that if there is constructive interference at one point, the 'extra' energy at that location must have come from somewhere else. There must therefore be destructive interference somewhere else. "If two or more electromagnetic waves arrive at point P out-of-phase and cancel,

'What does that mean as far as their energy is concerned?' Energy can be distributed, but it doesn't cancel out."
Section 7.1 The Addition of Waves of the Same Frequency, "The superposition of coherent waves generally has the effect of altering the spatial distribution of the energy but not the total amount (of energy) present."
[7] "Optics", Eugene Hecht, Fourth Edition
Section 9.1 General Considerations, "A maximum irradiance (power) is obtained when cos(s) = 1. ... In this case of total constructive interference, the phase difference between the two waves is an integer multiple of 2*Pi, and the disturbances are in-phase. ... A minimum irradiance (power) results when the waves are 180 degrees out-of-phase, ... cos(s) = -1, ... and is referred to as total destructive interference." ("s" replaces the Greek letter Sigma and TOTAL DESTRUCTIVE INTERFERENCE is emphasized.)
[8] Maxwell, Walter, "Reflections II", (c) 2001 Worldradio Books, ISBN 0-9705206-0-3 page 4-3, "The destructive wave interference between these two complementary waves ... causes a complete cancellation of energy flow in the direction toward the generator. Conversely, the constructive wave interference produces an energy maximum in the direction toward the load, ..." page 23-9, "Consequently, all corresponding voltage and current phasors are 180 degrees out of phase at the matching point. ... With equal magnitudes and opposite phase at the same point (point A, the matching point), the sum of the two (reflected) waves is zero."
[9] Quotes from two web pages from the field of optical engineering:
www.mellesgriot.com/products/optics/oc_2_1.htm
"Clearly, if the wavelength of the incident light and the thickness of the film are such that a phase difference exists between reflections of p, then reflected wavefronts interfere destructively, and overall reflected intensity is a minimum. If the two reflections are of equal amplitude, then this amplitude (and hence intensity) minimum will be zero." (Referring to 1/4 wavelength thin films.)
"In the absence of absorption or scatter, the principle of conservation of energy indicates all 'lost' reflected intensity will appear as enhanced intensity in the transmitted beam. The sum of the reflected and transmitted beam intensities is always equal to the incident intensity. This important fact has been confirmed experimentally."

Topic: 2926 Message: 2926

Hi OM/YLs

Yesterday 18 Dec 2005 had contact from Mathe ran to Mamba repeater.
Setup was Kenwood TH 78A with telescopic antenna and tiger-tell.Output of HT was 5W.This contact was not from hi point in Matheran.
I must thank VU2SCQ,VU2HIT,VU2UGO for coming on air and helping me.

The report : I was receiving repeater 5/9 in Matheran.

Please give signal report at your end

Dear Shailesh,

Signal report my end though the repeater was about 4/8 but simplex was 5/9. Congratulations on the good QSO.

The Eton E1 (originally announced as the Grundig Satellit 900) is the world's first radio that combines AM, FM, shortwave and XM Satellite radio into one ultra high-performance unit. In development for nearly ten years, in collaboration with RL Drake Company and XM Satellite Radio, the E1 is simply the finest full-sized portable in the world. The E1 is an elegant confluence of performance, features and capabilities. The look, feel and finish of this radio is superb. The solid, quality feel is second to none. The digitally synthesized, dual conversion shortwave tuner covers all shortwave frequencies. Adjacent frequency interference can be minimized or eliminated with a choice of three bandwidths [7.0, 4.0, 2.5 kHz]. The sideband selectable Synchronous AM Detector further minimizes adjacent frequency interference and reduces fading distortion of AM signals. IF Passband Tuning is yet another advanced feature that functions in AM and SSB modes to reject interference. AGC is selectable at fast or slow. High dynamic range permits the detection of weak signals in the presence of strong signals. All this coupled with great sensitivity will bring in stations from every part of the globe. Organizing your stations is facilitated by 500 user programmable presets with alpha labeling, plus 1200 user definable country memories, for a total of 1700 presets. You can tune this radio many ways such as: direct shortwave band entry, direct frequency entry, up-down tuning and scanning. Plus you can tune the bands with the good old fashioned tuning knob (that has new fashioned variable-rate tuning). There is also a the dual-event programmable timer. Whether you are listening to AM, shortwave, FM or XM, you will experience superior audio quality via a bridged type audio amplifier, large built in speaker and continuous bass and treble tone controls. Stereo line-level output is provided for recording or routing the audio into another device such as a home stereo. The absolutely stunning LCD has 4 levels of backlighting and instantly shows you the complete status of your radio. Many receiver parameters such as AM step, FM coverage, beep, kHz/MHz entry etc., can be set to your personal taste via the preference menu. The E1 has a built in telescopic antenna for AM, shortwave and FM reception. Additionally there is a switchable antenna jack [KOK] for an external antenna. The E1 comes

with an AC adapter or may be operated from four D cells (not included). 13.1 x 7.1 x 2.3 inches 4 lbs. 3oz. Assembled in India.
1. XM Satellite Radio ready
2. Continuous Shortwave with Selectable Single Sideband (SSB) Reception
3. Dual Conversion Superheterodyne Circuit Design
4. Digitally Synthesized PLL Tuner with Synchronous Detector
5. Passband Tuning and Selectable Bandwidth Filters
6. 1700 Station Presets with Memory Scan Function
6. Direct Keypad Entry (http://www.universal-radio.com/catalog/portable/0101key.html)
7. 5.7 inches Oversized Illuminated Multi-Function Dot-Matrix LCD Screen (http://www.universal-radio.com/catalog/portable/0101scrn.html)
8. Stereo Line-Level Audio Inputs/Outputs and External Antenna Connections (http://www.universal-radio.com/catalog/portable/0101IO.html)

Specifications

E1XM Features

- Frequency Coverage: 100-30,000 KHz, includes shortwave, medium wave AM broadcast band and longwave; 76-90, 87-108 MHz FM broadcast band; XM Satellite Ready Radio
- Reception Modes: AM, FM-stereo, Single Sideband (selectable USB/LSB) and CW
- Digital Display: large 5.7 inch square, 240 x 320 pixel, dot matrix display. Shows all modes and selected functions
- Programmable Memories: 500 user programmable with alpha labeling plus 1200 user definable country memories, for a total of 1700
Memory Scan Function
- Digital Phase Lock Loop (PLL) Synthesized Tuning with Direct Digital Synthesis (DDS) for drift-free frequency stability and finest tuning resolution
- Dual Conversion Superheterodyne Circuit: results in minimized interference through superior selectivity
- Excellent Sensitivity: yielding a true high-performance receiver
- High Dynamic Range: allowing for detection of weak signals in the presence of strong signals
- Selectable Bandwidths: 7.0, 4.0, 2.5 kHz for excellent selectivity
- Single Sideband Synchronous AM Detector: selectable USB/LSB or double sideband to minimize adjacent frequency interference and fading distortion of AM signals
- IF Passband Tuning: an advanced tuning feature that functions in AM and SSB. Greatly helps reject interference
- Tuning Modes: variable-rate tuning knob, direct keypad frequency entry, up/down pushbuttons and auto-tuning
- Direct Shortwave Band Entry, allows instant access to the shortwave band of choice
- Selectable AGC: fast and slow mode
- Display Backlighting: evenly lit backlight enables display viewing under all lighting conditions
- Dual Programmable Clocks With WWV Auto-Setting
- Dual-Event Programmable ON/OFF Timers: can be used for recording or ?alarm clock? function
- Superior Audio Quality via a bridged type audio amplifier, providing high output power with battery operation
- Separate, continuous bass and treble tone controls
- Headphone Jack
- Stereo Line-Level Input: allows listening to other devices such as a CD player through the E1
- Stereo Line-Level Output: for recording or routing the output to another device such as a home stereo
- Calibrated LCD signal strength meter
- Built-In Antenna: telescopic antenna for AM, FM and Shortwave reception
- External Antenna Connection for the addition of auxiliary antennas, e.g. professionally engineered shortwave antennas; long-wire shortwave antennas; specialized AM broadcast band antennas for enthusiasts of AM DX?ing; FM broadcast band antennas
- Power Source: 4 "D" Batteries (not included); AC Adapter (included)
- Dimensions: 13?W x 7-1/2?H x 2-1/2?D (333 x 188 x 66 mm)
- Weight: 4 lb 3 oz. (1.9 Kg)

Subject: [VUHams] Re: Broadband

Sarla,

Two probs far as I can see :-
(A) a router that is not configured
(B) a firewall that is blocking echolink.

In the first place pl confirm whether you have a fixed IP address for your computer. Your router will be 192.168.1.1. If there is only one computer then go Start -> Control panel -> Networking -> local area connection -> right-click -> "properties" -> Internet Protocol(TCP/IP).If "use the following IP address" has been selected, note the IP address. Else select "use the following IP address".
IP address to be 192.168.1.AnythingBetween2And254.
Subnet Mask 255.255.255.0
Gateway 192.168.1.1

If (A)above, you will have to log into the router by
1. typing 192.168.1.1 in your browser
2. and using "admin" as username as well as password. (Hopefully your router-supplier has not changed it)

Once in the router you will have to find "port forwarding" in the menu or submenu. You will have to enter 5198 and 5199 as the port numbers for which incoming and outgoing traffic is to be allowed under UDP. Similarly set port 5200 to allow outgoing traffic under TCP. In both cases you have to key in the IP address of the comp.

Restart Networking and the router and if there are no firewall issues, you should be ok. Better still restart the system :-)

Am using ZoneAlarm Pro as a firewall so am unable to comment on anything other than that.But in principle, you shd configure the firewall to allow access as is done for the router.
Have found this link for Windows XP firewall and echolink in case you are using the XP firewall.
http://www.qsl.net/vk2jtp/xpfirewall.htm.

2942. Amateur (Ham) Radio Volunteering - a big event Feb 2006

Yahoo group: m_a_r_s
Date: 2005-12-26 05:27:51 UTC
From: Ajoy
Topic: 2942 Message: 2942

Dear Friends,

Karnataka State has planned International level religious and cultural events to mark the "Mahamastakabhisheka" of Bahubali at Sravanabelagola, in Hassan District in February 2006.

This Mahamastabhisheka happens once in 12 years and the Statue of Gomateshwara is 1025 Years young, believed to be the worlds tallest monolithic (single stone) statue standing 57 feet on top of the hillock. This Feb 2006, an estimate of 30 Lakh people are expected to visit this small village, including the top VVIPs of our country and abroad. Details of this event can be had at http://www.jainheritagecentres.com

Though the State and Central Government have been spending a lot of money to develop its infrastructure on this occasion, we amateur (ham) radio volunteers are struggling to make our presence felt for the first time during Mahamastabhisheka have managed to talk with the organisers for Amateur (Ham) Radio Service with the sole idea of (a) working maximum DX HF stations in contest type QSOs in as many modes and bands as possible and (b) helping local authorities using VHF communications for crowd control etc., with a single likely special call "AT6MM" (yet to be alloted by WPC) to operate a special event station,. The plan is to operate the special event station for a minimum period of three weeks, or at least from 8th to 18th February 2006 (though the event starts on 22nd January 2006), so that different highly active groups from Bangalore, Mangalore, Mumbai, Kolkata and Gujarat can also participate in this mega event, to make as many DX QSOs as possible by assigning few days for each groups.

The Organsiers at Sravanabelagola are expected to arrange very simple boarding and lodging facilities for small operating group. All other expenditure, like your two-way travel etc, are to be managed by your own group. The special QSL card for the occasion with the call AT6MM is likely to be printed by the Organizers.

Your willingness to come with your group and equipment, may kindly be E-mailed to lions@... , immediately for taking further action at this end.

From at6mm-group volunteered by VU2UR, VU2LX and VU2JHM dated 17th dec 2005.

From: Mumbai Amateur Radio Society MARS
Topic: 2944 Message: 2944

Dear Members & Friends
This is for the first time I am addressing you all, reason for this as I, VU2ST the rightful owner of the group who has taken in charge of the groups unfortunately been termed as Hacking. I fail to understand that the earlier owner/moderator Mr. Nilesh Rathod VU2NLF of this group who feels that he own the group and society and was making rules to add member at his own whim and fancy.
Please understand friend I am one of you with a call sign VU2ST which itself means "MUMBAI AMATEUR RADIO SOCIETY" and such policy decision has to be taken by the Managing committee of the society not an individual member of the the committee regardless of his post, but this was flaunted by the secretary itself who may have regarded himself the godfather.
I am not disputing his contribution to the society but others too have why is that when any policy decision was to be taken MC members were consulted and when any decision regarding the MARS group was to be taken it was taken at an individual level and not at the committee level.
first and foremost when the mars group was formed it was for mars members only why did non members were added??
why the other two groups continue inspite the members attaining full membership not shifted to the original group?
I have taken pains to make this group in order and have not done any harm to the group , if i wanted i would have deleted the group and removed the earlier owner from his moderator ship , organized the group members by adding them from other 2 groups, if members still feel they are free to join any other groups i will not resist them so but you will be only strengthen the ill effort of a individual who thinks that the society is owned by him.
I am assuring you that I will make the new Chairperson and Secretary in charge of this group and then this legacy will continue as when the committee is formed, Ideally this should be the practice when a new committee is formed lot of changes are made for e.g. Signature in Bank Accounts are changed inspite of lot efforts are required, so why not this group wherein just few minutes are required.
I still do not understand the earlier Mr. Nilesh Rathod VU2NLF makes a statement that he will no more continue as secretary and on the other hand still wants the control of the society indirectly, why can't he just leave the new committee on its own and make them NLF-free so that the society can function smoothly, efficiently with lot of participation of members on all level.
Please also member I feel after this mail lot of discussion will be initiated, but will not reply to any. if u feel you may send mail directly to me and keep this group hassle free where only Ham related discussion takes place for which the society and group were started.

To the person who call himself VU2ST.

VU2ST is the call sign which belongs to MARS, any tom dick and harry cannot claim himself to be VU2ST.

VU2NLF is the secretary of MARS, and therefore the rightful owner of the MARS Group. (which now hacked by VU2ST).

You say you will make the new chairman or the secretary the owner of the group, which means you do not recognise the current secretary and you think you are above the law.

Just one more thing if you look at the licence of VU2ST it has VU2NLF's photo on it, so please do not try to claim that you are VU2ST.

well your indentity will be exposed in the EGM and necessary legal action will be taken against you.

2946. VU2ST

Yahoo group: m_a_r_s
Date: 2005-12-29 06:16:24 UTC
From: sarla sharma
Topic: 2944 Message: 2946

Hello VU2NLF,the phantom VU2ST and common junta of mars,
Mr Phantom, I really dont understand as to what other name can be given to your effort of hacking into this group. There is really no other term that can be applied in the cyber world to this action. I cannot condone this as it is a wrong thing to do. I fail to understand why this mode was adopted by you to air your grievances. We are after all just a hobby group. There is nothing to fear in eyeball confrontation of issues with NLF. Mars is still a demoncratic institution. Whatever NLF is doing, whether right or wrong, is because he is allowed to do it!!!There is still the power of the vote. The best way to keep anybody at leash is the vote. So stand for election and if all have faith in your capabilities, you will be in the commitee.
Please dont mistake this effort of mine as me coming out in favour of NLF. I think he is obnoxious. In my association with him over the years, I have seen him turn from a fun loving ham to a person pretending to be a CEO of a company which doesnt exist!!!If he managed to start MARS with the support of many like me, he has also managed to mess things up pretty bad. Mars has forgotten the very basics of hamradio which is friendship. It has all gotten down to proving who is mightier, and all this amongst people who never come on radio or pursue the hobby for what it is. Hobbies are supposed to be enjoyed and not create tension.
But one must admit that NLF didnt force anything. We let it happen. If we let it happen, then we have no business to complain. If a change is required then it can only be done if we come forward to take responsibility in MARS. I suggest Mr Phantom that you act and not keep just complaining.
NLF, would it be too much to ask you to loosen up? I know you have listed me as an "enemy" of Mars in many forums behind my back, but I do care as to what happens to mars. Our hobby needs more enthusiasts and we need to bond rather than try to demolish each other.
To the junta at mars, I must clarify that I took this step of writing this mail is because I am one of the founder members of MARS. That doesnt put me in a pedestal, but definitely gives me the right to state my views.
So please come to the EGM and vote. You will get what you deserve, only by the vote.
Thanks,
Sarla

Dear friends,

Shri Ravishankar known worldwide for Art of Living and Sudarshanakriya with their organisation known as Vyakti Vikas Kendra are having their Silver Jubliee Celebrations lined up for 17th to 19th of February 2006.

Those Amateur (Ham) Radio Licencees who are practicing above and who are interested in providing VHF / HF assistance or otherwise to register themselves as Ham Volunteers so that not only make Silver Jubilee but future activities of this organisation.

Do check for this link
http://www.silverjubilee.org/VolunteerHAM.asp
and their main link http://www.artofliving.org

The other one is Mahamastabhishekha at Sharavanabelogola between Jan 22nd to Feb 25th, 2006.

de Lion Ajoy ☐VU2JHM
Amateur (Ham) Radio Volunteer.

2949. Re: [m_a_r_s] don't make him a hero

Yahoo group: m_a_r_s
Date: 2005-12-30 03:46:31 UTC
From: nilesh rathod
Topic: 2944 Message: 2949

hello sarla,

Please don't make the "hacker" the "hero" , he has violated the law and there is no dispute about it. he claims he has done so for the better of our society, but the fact is his sole purpose for hacking was to challenge the decision of VU2NLF and the Managing commitee for expelling Mickey - VU2IZO from the society. he hacked in and enrolled VU2IZO back into the group.

Whatever the decision maybe according to you right or wrong, you cannot challange the M.C. they are the custodian of the society, you have elected him, so now you must accept their decisions.

The hacker has stated in his mail that a lot of non members were on the group, well I have not enrolled any single non member (with exception of VU3WJM, because he is a well wisher of mars and he is a lot to do with green bird issue).

I am sure most of the non members were approved by VU2ICQ, by mistake, when he was the secretary and moderator of the group. I am sure he corrected the mistake and removed those members.

As far as our other 2 groups are concerned, why they have were not transfered to MARS group, well most of them at that time student members and had actually not enrolled by paying fees, plus we had kept these students seperate till they get their tickets as all student related info was mailed on this group and to avoid all unnecessary students related mails on our main group, that was the whole purpose of forming seperate group. mails related to our society was always posted to all the groups which you may please note.

VU2SCQ and VU2UGO, both were made moderator to sort out these students and transfer them to main group. I have never capitalized on the group, I have transfered the powers to VU2ICQ when he was the secretary and I have got it back when I again became the secretary.

So this hacker trying to justify his cause is absolutely bogus, his sole intention was to bring VU2IZO back into the group. if he wanted to really help our society in sorting out the groups, all he had to ask me I would have made him the moderator as I made VU2SCQ and VU2UGO.

These are the facts and they are indisputabe, Yahoo Groups mentions a moderator log which has all the entries, and it can be verified.

As far my attitude of running the society (like CEO) is concerned, I have always said Ham radio is hobby, MARS is a society of hobbist, but MARS in itself is not a hobby, we are a organisation, answerable to our members and to the GOVT. and therefore I HAVE to run it in a profesional manner. for example I cannot justify delays to the Income tax Authorities or Registarar of Societies, by saying its a HOBBY.

Members don't like my approch may not vote for me.. I will accept their decisions. I have no problem with that. In fact before the AGM I clearly stated that I do not wish to

continue, because of QRM of handful of members,
I gave you guys the society on the platter, and what happened ? we nearly ended in winding up the society.

I care for MARS and I work hard for it and I therefore will not let the society disolve, I am going to run for elections and I have 6 others members also running for election. so whatever happens in the EGM, one thing is for sure MARS will continue...

You (Sarla) claim yourself to be a concerned founder member for MARS, but your loyalty to MARS is questionable, You have put in more time in a rival society (TARA) then in MARS, You have once ran for election and became the chairperson of MARS, and then resigned... In the AGM I heard you saying to "desolve the society" not once but 4 times, now tell me which founder member would wish to desolve the society ? I have never said that you are a "enemy of MARS" but you loyalty to MARS is questionable.

You believe in "POWER OF VOTE" why not run for elections and see for yourself. the janta will decide....

Hi there Nilesh,
Pointless talking to you. I dont beleive you read my mail nor understood it. I never believed that any ham group can be an be a rival of another. Thats your line of thinking. Rivalry was never my forte. If there are 10 ham societies in mumbai, I would be a member in all of them . As for the question of loyalties, why the heck should anybody have to prove that, specially to you!!!!!
Cheers
Sarla

Right said "budd ". let's bury the hatchet and try and be role models as we have always been to old and new alike. After all, what is a family without those minor tiffs between family members? :)

Wish you all a great new year ahead.
Hope we put our NBs ON-let's banish QRM.

Cheerio!

Dear Members,

Please ignore this message as it is generated by the hacker.

You must have received the invitation from our new group M-A-R-S. and hopefully you must have registered yourself.

The actual EGM details are posted on our new group.

Kindly unsubscribe from this group as soon as possible to avoid future confusions.

2960. MISSING NOMINATION.

Yahoo group: m_a_r_s
Date: 2006-01-07 04:52:59 UTC
From: Mr Mukesh Jaitley
Topic: 2960 Message: 2960

Hello Nilesh/fellow hams.

It was very heartening to see the nomination list , but i also felt sad at ommisionof my name also vu2hit and vu2 rios name , dont know what went wrong , cause even though i received blank nomination form on 5th itself by courier , since i had previous blank form , i filled it up and got it proposed by vu2hit and secounded by vu2tpi, and had sent it across , cause all 3 forms viz vueugj/vu2hit/vu2rio were bunched together and i guess couriered ,i really dont know what went wrong.any ways this was clarification cause i was the first one to raise my hands for re election procedure in EGM on 8th and look here am i the one missing the bus .

Guess , am not destined , but what is good , that we wont have society getting defunct , as we have elections hppng now , and there will be a commitee , and a i said in my earlier mail we all have to chip in our efforts.

so all the best for future to all of us .

de vu2 ugj
mukesh jaitley.

ps : since we are mumbai amateur radio societ , started in mumbai with its base , i guess all administrative and executive work should be conducted from mumbai , so that the kind of goofup that happnd with my nominations doesnt happens , and i think we should also , discuss before the EGM as a issue of having persons on board within geographical region of mumbai and thane as their base , dont know , how the society would function with a remote , like previously vu2 icq had to step down as he had shifted base from mumbai , so pls discuss this , and lets have a commitee ,which represents mumbai more , and people whose base is not in mumbai, can represent us outside mumbai.

Dear Nilesh and Friends

During the AGM when no election took place due to no members coming forward, and inspite of my personal commitments , I took the challenge to run the society...but due to the goofed up i have missed the bus too..UGJ & RIO....it seems we are destined or being made so, anyway I am happy we have election as 9 members have come forward..but the last point UGJ put forward need to be considered seriously for efficient running of the society

2963. Nomination not received..

Yahoo group: m_a_r_s
Date: 2006-01-07 07:32:40 UTC
From: nilesh rathod
Topic: 2963 Message: 2963

Dear Huzefa & Mukesh,

I am very sorry to learn about your nomination forms. I had absolutely no idea that you guys have filed your nomination forms till I spoke with you (HIT) late last night. Till this date I have not received your forms and that is a fact.

What I find strange is that almost all the poeple who have filed their nominations have confirmed with me on phone about the receipt of their nomination form, surprisely none of you guys (HIT, UGJ RIO) bothered to do that..

I have discussed this issue with M.C Members (Prashant, VU2CBU and Pankaj, VU2RIO) and we have come to the conculsion that not much can be done about it now, as we have to stick to the norms..

I don't understand the delay, you guys had one and half months (AGM to EGM) to file your nominations, why did you wait till the last date ? the nomination form is the same form, which was mailed and couried to you earlier, a copy of the same was again,mailed (soft copy) and hard copy again couriered.

I have received Feroze patels's nomination 15 days ago by ordinary mail.. I myself filed my nomination form 1 week ago, when I could have filed at the last minute.. I have received 9 nomination forms in total...

As far as the question about my running the society from Pune is concerned, I simply fail to understand, what is the difference ?

I am physically present for the meetings and events, I am more on 2 meters than many of you guys, In fact I am told that my VHF signal is better that some of the local Mumbai stations, VU2HIT himself had called me to confirm weather I was in Mumbai or Pune as he could not make out the difference..

I am on e-groups and I even use a Mumbai mobile number phone...how does it matter where I sleep ? ....In fact one will never come to know that I stay in pune, if I don't let them know...

As far as mukesh's point on sending form to Pune is concerned.. well it takes the same amount of time, weather you courier it to Pune, Mumbai or Thane.. it reaches the very next day...

2979. Cross Post from CQ-VU Internet saps ham radio popularity

Yahoo group: m_a_r_s

Subject: [CQ_VU] Internet saps ham radio popularity

Source ::: The Peninsula

Doha: Proliferation of the Internet and its popularity among youth has caused the decline of amateur radio, the world's only hobby governed by international laws, Timothy St J Ellam, Vice-President, International Amateur Radio Union (IARU), said here yesterday. The number of ham radio operators worldwide has dropped by about 10 per cent over the last decade, he added.

In an interview with The Peninsula, Timothy said, easier access to the Internet had weaned away youth from taking up amateur radio as a hobby. Amateur of ham radio is a hobby that allows enthusiasts to communicate with similarly licensed and equipped persons across the globe. Such radio communications are used primarily as a hobby. However, ham radio has also served excellently in establishing contact between the world and disaster hit areas, where other, conventional forms of telecommunications failed due to a breakdown of the infrastructure.

The official estimated that about 3m people around the world pursue the ham radio hobby but in most countries, the number had either declined over the years, or remained stagnant. In India, for example, he said, the number of amateur radio operators was stagnant though there was an increase in hams in China. He pointed out that amateur radio nowadays was not confined only to Continuous Wave (CW) contacts through Morse code or Single Side Band and Frequency Modulation voice communications. Developments in technology now also permit hams to communicate via data, he added. Timothy is representing the IARU at the ongoing 4th World Telecommunications Development Conference being held in Doha, along with IARU's Region-1 Vice President, Tafa Diop.

My Groups | ARSI Main Page

Dear ARSI Member

As you know we have had taken up with WPC the
issues regarding rules and we are happy to advise
that a part of our representation has been given
effect to. Other items are in the pipeline and we
will keep you informed as and when some changes take place.

Gopal Madhavan
(President)

(Extract from the Gazette of India-Extraordinary)
MINISTRY OF COMMUNICATIONS AND INFORMATION TECHNOLOGY
(Wireless Planning and Coordination)
NOTIFICATION
New Delhi the 9th June 2005

G.S.R. 385(E).- In exercise of the powers
conferred by Sections 4 and 7 of the Indian
Telegraph Act, 1885 (13 of 1885), the Central
Government hereby makes the following rules
further to amend the Indian Wireless Telegraphs
(Amateur Service) Rules 1978.namely:-
1) Sort Title and commencement:- (1) These
rules may be called The Indian Wireless
Telegraphs(Amateur Service) Amendment Rules,
2005. (2)They shall come into force on the date
of their publication in the Official Gazette
2) In the Indian Wireless Telegraphs
(Amateur Service) rules. 1978,(hereinafter
referred to as "the said rules) for Rule 4, the
following rule shall be substituted, namely:-

"4, Categories of Licence: There shall be two categories of licences, namely
(i) Amateur Wireless Telegraph Station Licence(General)
(ii) Amateur Wireless Telegraph Station Licence(Restricted)"

3) In rule 5 the said rules:-
(a) in sub rule(1) in the proviso, for the
words and figure "Station Licence Grade-II, the
words and brackets "Station Licence (Restricted) shall be substituted;
(b) In sub rule (2) for the portion beginning
with the words "Notwithstanding anything
contained" and ending with the words, Short wave
Listeners Amateur Wireless Telegraph Station
Licence"., the following words, brackets and
letters shall be substituted, namely:-

"Notwithstanding anything contained in clause (b)
of sub-rule (1), the Central Government may grant
to bonafide experimenters between the age of 12
and 18 years, Amateur Wireless Telegraph Station
Licence (General) or Amateur Station Licence (Restricted):"
4) In rule 7 of the said rules:-
(a) for clause (b) the following clause shall be substituted, namely:-
(b) such person pays the fees on the following scale, namely:
(i) Amateur Station Operators Examination (General) -Rs.. 100.00
(ii) Amateur Station Operators Examination (Restricted) Rs. 100.00

(b) clause (c) shall be omitted

5) In rule 8 of the said rules, for sub-rule
(2) the following sub-rule shall be substituted, namely:-
"(2) An application for Licence in Annexure-II to
the rules shall be submitted not later than one
month before the date of the desired examination."
6) For rule 11 of the said rules, the
following rule shall be substituted, namely:- !!.
Period of Validity- (1) A Licence granted under
these rules shall be issued for a period of 20
years or lifelong as the case may be commencing
on the date of issue of the Licence and expiring
on the last date of the month preceding the month of issue.
(Explanation:- For the purpose of this rule, the
expression "life long:" means till the holder
attains the age of 80 years. The validity of the
life long Licence may be extended on specific
request of the Licence holder for 10 years at a
time without any additional payment."
7) In rule 12 of the said rules, for
sub-rule (1) the following sub-rule shall be substituted, namely:_
"(1) A Licence fee on the following scale shall
be payable to the Central Government on receipt
of instructions from that Government and in the manner directed by it:-
Category of Licence Fees in Rupees
20years Life Long
(i)Amateur Wireless Telegraph 1000 2000
(ii)Station Licence (General) 1000 2000

8) In rule 14 of the said rules, in sub rule(10:-
(a) for the words "two or five years, as the
case may be" the words" twenty years" shall be substituted;
(b) for clause (c) the following clause shall be substitute, namely
"© Pays a fee of Rs.1000/-"
9) In rule15 of the said rules:-
(i) for the words "two years" the words "five years" shall be substituted;
(ii) for letter and figures :Rs.10/- the
letters and figures "Rs.100/-" shall be substituted

10) In the said rules, in the proviso of rule
17, for words "rupees Five", Rs. 200/-" shall be substituted
11) In the rule 18 of the said rules, in sub rule (1)
(a) for clause (ii) the following shall be substituted namely:-
"(ii) the applicant holds an Amateur Wireless
telegraph Station Licence (General)
(b) in clause (iii) for the letters and
figures "Rs10/- the letter and figure"Rs.200/-" shall be substituted
12) In the rule 20 of the said rules, in sub-rule(2)
(a) in clause(i) for the letters and figures
"Rs.10/-" the letters and figure "Rs100/-" shall be substituted
(b) in clause (ii) for the letters and
figures "Rs5/-" the letters and figures "Rs 100/-" shall be substituted.

C. Rama Rao, Assistant Wireless Advisor.

2983. QRM

Yahoo group: m_a_r_s
Date: 2006-04-07 08:04:01 UTC
From: Jaiprakash Pullakudy
Topic: 2983 Message: 2983

Dear Martians.

QRM on Thursday's ECHO-Link is very much regretted.

Dear please note, we are heard over the world.

Such QRM behind the curtain can be created only by
illegal elements and not by ham community. But this
QRM by a ham - horrible.

Since all on the air are experienced hams I am sure to
locate this transmitting station is easy.

I could read what was punched. Checked on 144.700 for
signal strength of the transmitting station. So guess
how to locate QRM creator.

As our frequency is being used by non-hams I was
deciding to put up fox hunt antenna on my terrace top
with manual rotator at my window. This was just for
an experiment purpose to know the location of the
station being transmitted. Since I am at Chembur
which is some what centre of Mumbai I have a chance of
pointing antenna 360deg. NOw i feel it necessary for
many a hams do fix up fox hunt antenna to pin point
our own ham's qrm.

Hoping peaceful nets and QSOs

2984. DMP Support.

Yahoo group: m_a_r_s
Date: 2006-04-07 13:33:04 UTC
From: Jaiprakash Pullakudy
Topic: 2980 Message: 2984

Dear Friends

This is an invitation to all Hams in Mumbai & Thane for Ham Radio Communication Support, whenever required by me for Civil Defence, during any disaster.

Civil Defence Services carry a heavy responsibility and they are well trained for that purpose.

I am a Civil Defence cadet since 1995 and as on date I am Dy.Divisional Warden for BMC?s ?M? Ward (West). My base was always at Mumbai/Area Office during emergencies. Being busy with my morning QTH I was not able to mobilize to any disaster locations. Hence from Ham Radio I was out of Mars DMP Team (ARES). Now I have left my office for good and I work on my own as an Insurance Consultant making myself free for other activities also.

CD Area is divided BMC?s Ward Wise and the In-charge is known as Divisional Warden under whose leadership comes Dy.Dvl.Wardens, Staff Officers & Post Wardens. The every BMC Wards are further divided in to 10-20 chowkies whose incharge are Post Wardens. Post Wardens are highly responsible persons of the particular chowki to have complete knowledge of the given location.

Civil Defence has it?s own communication network of HF and VHF and always mobilize during emergencies. Latest being in Tsunami. Around 26 CD Cadets worked after Tsunami at Different Islands for 22 days continuously.

We have worked during: Ganesh Visarjans, BMC Strikes, Elections, All Red Alerts, 27/6 flooding, Latur ? Orissa & Gujarat Earthquakes, Tsunami, etc.

To deal with emergencies, CD renders the following services.

Rescue Service - Fire Service - Casualty Service.
Depot Service. - Welfare Service - Warden Service
And
Control & Communication Service.

Myself is a part of CD?s Control & Communication Team.
Every quarter CD conducts Emergency Stimulation
Exercise in Mumbai.

As a second line of communication setup during any
Disaster, Ham Radio Operators are the best. Hence the
communication support required from hams will be Relay
of Messages operating from our own QTH. Therefore,
hams who can volunteer to support during any disaster
can send me their details in the given format:

1. Call-sign
2. Handle
3. Address
4. Your area BMC Ward
5. LL (O) & (R)
6. Mobile
7. HF working at QTH
8. VHF working at QTH

These details will be of great help for co-ordination.

Awaiting your full support.

2992. DMP SUPPORT

Yahoo group: m_a_r_s
Date: 2006-04-19 11:17:53 UTC
From: Jaiprakash Pullakudy
Topic: 2987 Message: 2992

Dear Friends

This is an invitation to, ALL HAMS from MARS in Mumbai, for Ham Radio Communication Support whenever required
by me for Civil Defence, during any disaster.

Civil Defence Services carry a heavy responsibility and they are well trained for that purpose.

I am a Civil Defence cadet since 1995 and as on date I am Dy.Divisional Warden for BMC?s ?M? Ward (West). My base was always at Mumbai/Area Office during emergencies. Being busy with my morning QTH I was not able to mobilize to any disaster locations. Hence from Ham Radio I was out of Mars DMP Team (ARES). Now I have left my office for good and I work on my own as an Insurance Consultant making myself free for other activities also.

CD Area is divided BMC?s Ward Wise and the In-charge is known as Divisional Warden under whose leadership comes Dy.Dvl.Wardens, Staff Officers & Post Wardens. The every BMC Wards are further divided in to 10-20 chowkies whose incharge are Post Wardens. Post Wardens are highly responsible persons of the particular chowki to have complete knowledge of the given location.

Civil Defence has it?s own communication network of HF and VHF and always mobilize during emergencies. Latest being in Tsunami. Around 26 CD Cadets worked after Tsunami at Different Islands for 22 days continuously.

We have worked during: Ganesh Visarjans, BMC Strikes, Elections, All Red Alerts, 26/7 flooding, Latur ? Orissa & Gujarat Earthquakes, Tsunami, etc.

To deal with emergencies, CD renders the following services.

Rescue Service - Fire Service -
Casualty Service.
Depot Service. - Welfare Service -
Warden Service
And

Control & Communication Service.

Myself is a part of CD?s Control & Communication Team.
Every quarter CD conducts Emergency Stimulation
Exercise in Mumbai.

As a second line of communication setup during any
Disaster, Ham Radio Operators are the best. Hence the
communication support required from hams will be Relay
of Messages operating from our own QTH. Therefore,
hams who can volunteer to support during any disaster
can send me their details in the given format:

1. Call-sign
2. Handle
3. Address
4. Your area BMC Ward
5. LL (O) & (R)
6. Mobile
7. HF working at QTH
8. VHF working at QTH

These details will be of great help for co-ordination.

Awaiting your full support.

Subject: How can your organisation help in Disaster Mitigation?

The BMC Disaster Management Cell has asked the NGO Council to furnish details of organisations (non-profit or commercial) who can provide services or get involved prior, during, and after a disaster as per their expertise, capability and interest.

This will be put into a publication they intend printing so that you can be contacted quickly by different agencies in the event of a disaster, and also for meetings, information dissemination, workshops, capacity-building, etc.

So please email and also post the following information on the letterhead of your organization. Please also see the Disaster Management and Flooding Sections in www.karmayog.org

Thank you.

To: NGO Council, C/o Karmayog, Shreeniwas House, 2nd floor, H. Somani Road, Fort, Mumbai 400001

HI FMP & WET

I am really impressed that Group policy are being slowly carved out and as promised by feroze things are coming into order.

Sorry to say WET but it seems you have not done your homework well, please check the "List of Equipment to be carried for Scramble Team Exercise" drafted by our dear friend NLF which states the LAPTOP as part of it, so if you feel i am wrong then something is really wrong somewhere, However It seems all mail i put are scrutinized and then all policy or rules are made.

anyway cut short... i do not intend to start any business , i put this mail since this laptop is with me which i wanted to sell to the our members since it is at a good price & same price which i bought and also in the past NLF & UGJ and other members have benefited and also most talked ARES members would have benefited for digital communications.

Members please make me understand & decide
Does selling this Ham radio related equipments tantamount to commercial exploitation??
then what about the mail sent about selling Ham Radio Related equipments by other member.

and what about mail sent by members discussing issue not related to ham radio...
is it because i am being more vocal therefore i am being singled out and my mail are being moderated.

Also to inform you all i would have not sold this laptop since i would have require for my Ham gear but i am buying a HF from the proceed i get from the laptop.

De
Huzefa Merchant

PS : Feroze dont you think some one is being instigated by some one to make this happen & look as a QRM on the group!!!!

I am with you WET,
this group should be used exclusively for healthy
discussion on ham radio and the hobby only.
There should be no commercial exploitation on this group.
HIT you will agree that the first rule we learn is not to exploit this hobby for gain or profit. Maybe you were trying promote a bargain offer amongst your collegues. But this is

not the platform.
All of us will refrain from posting such mails.

Dear Members of MARS,

As a commitee member and moderator of this e-group I put this message
across to the members of this group and ask each and every one of
you, should we allow such messages (that help people to make
money...sell Bread and honey)or just restrict the e-group to healthy
discussion on ham radio and the hobby only.
Is this not spamming?
Is this not making money out of ham radio?
Is is right to post personal ads on this group?

The answer has to be given by you'll ....members?

Moderator and Commiteee member,
VU2WET

Attached herewith copy of the message

W32.Blackmal.E@mm
Discovered on: January 17, 2006
Last Updated on: February 03, 2006 01:26:05 PM

W32.Blackmal.E@mm is a mass-mailing worm that attempts to spread through network shares and lower security settings. On the third day of every month it attempts to rewrite files with certain extensions with custom text.

Also Known As: CME-24, Win32.Blackmal.F [Computer Associates], Email-Worm.Win32.Nyxem.e [F-Secure], Email-Worm.Win32.Nyxem.e [Kaspersky], W32/MyWife.d@MM [McAfee], W32/MyWife.d@MM!M24 [McAfee], Win32/Mywife.E@mm [Microsoft], W32/Small.KI@mm [Norman], Tearec.A [Panda Software], W32/Nyxem-D [Sophos], WORM_GREW.{A, B} [Trend Micro]

Type: Worm

Systems Affected: Windows 2000, Windows 95, Windows 98, Windows Me, Windows NT, Windows Server 2003, Windows XP

d.. Threat containment: Easy
e.. Removal: Moderate
Threat Metrics

Wild:
Medium
Damage:
Medium
Distribution:
High

Damage

a.. Payload Trigger: n/a
b.. Payload: Deletes files and registry entries of security-related applications.
a.. Large scale e-mailing: Creates a mass-mailing of itself using addresses gathered from the compromised computer.
b.. Deletes files: Attempts to delete files associated with security-related programs.
c.. Modifies files: n/a
d.. Degrades performance: n/a
e.. Causes system instability: n/a
f.. Releases confidential info: n/a
g.. Compromises security settings: n/a
Distribution

a.. Subject of email: Varies.
b.. Name of attachment: Varies.
c.. Size of attachment: n/a
d.. Time stamp of attachment: n/a
e.. Ports: n/a
f.. Shared drives: n/a
g.. Target of infection: n/a

When W32.Blackmal.E@mm is executed, it performs the following actions:

1.. Copies itself as one of the following files:

a.. %Windir%\Rundll16.exe
b.. %System%\WINZIP_TMP.EXE
c.. %System%\SAMPLE.ZIP

d.. %System%\New WinZip File.exe
e.. movies.exe
f.. Zipped Files.exe

Note:
g.. %Windir% is a variable that refers to the Windows installation folder. By default, this is C:\Windows or C:\Winnt.
h.. %System% is a variable that refers to the System folder. By default this is C:\Windows\System (Windows 95/98/Me), C:\Winnt\System32 (Windows NT/2000), or C:\Windows\System32 (Windows XP).

2.. Copies itself as one of the following files:

a.. %System%\scanregw.exe
b.. %System%\Winzip.exe
c.. %System%\Update.exe

Note: The worm monitors the above files and will recreate them if they are deleted.

3.. Creates an empty .zip file using the same file name as the worm itself in the %System% folder. It then opens this file in order to hide its functionality.

4.. Drops the file %System%\MSWINSCK.OCX which is a clean Microsoft control used for network connectivity.

5.. Adds the value:

"ScanRegistry" = "scanregw.exe /scan"

to the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

so that it runs every time Windows starts.

Note: The worm monitors the above registry entry and recreates it if it is deleted.

6.. Modifies the values:

"WebView" = "0"
"ShowSuperHidden" = "0"

in the registry subkey:

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\
Explorer\Advanced

Note: The worm monitors the above registry entries and recreates them if they are deleted.

7.. Modifies the value:

"FullPath" = "1"

in the registry subkey:

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\
Explorer\CabinetState

Note: The worm monitors the above registry entry and recreates it if it is deleted.

8.. Adds the values:

"5f54e750-ce26-11cf-8e43-00a0c911005a" = "mnlnnimimnoiuilnvjkinnkitjwjnimntntm"
"F4FC596D-DFFE-11CF-9551-00AA00A3DC45" = "mbmabptebkjcdlgtjmskjwtsdhjbmkmwtrak"

"E32E2733-1BC5-11d0-B8C3-00A0C90DCA10" = "kmhfimlflmmfpffmsgfmhmimngtghmoflhsg"
"4250E830-6AC2-11cf-8ADB-00AA00C00905" = "kjljvjjjoquqmjjjvpqqkqmqykypoqjquoun"
"BC96F860-9928-11cf-8AFA-00AA00C00905" = "mmimfflflmqmlfffrlnmofhfkgrlmmfmqkqj"

to the registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Classes\Licenses

which enables the %System%\MSWINSCK.OCX file to function.

9.. May modify values in the following registry subkeys:

HKEY_CURRENT_USER\Control Panel\BMale
HKEY_CURRENT_USER\Control Panel\DNS

10.. Disables the mouse and keyboard functionality the first time the worm is executed on the compromised computer.

11.. Displays the following icon in the Windows Task Bar when it detects the presence of antivirus software:

Note: The text "Update Please wait" is displayed when a user hovers over the icon.

12.. Monitors the titles of active windows. If the user is browsing with Windows Explorer, the window title is the path to the current folder. The worm uses this information to search the current folder for the file desktop.ini. If this file exists the worm copies itself to the current folder as WinZip_Tmp.exe and creates the file temp.htt.

13.. Deletes the following files:

a.. %ProgramFiles%\DAP*.dll
b.. %ProgramFiles%\BearShare*.dll

c.. %ProgramFiles%\Symantec\LiveUpdate*.*
d.. %ProgramFiles%\Symantec\Common Files\Symantec Shared*.*
e.. %ProgramFiles%\Norton AntiVirus*.exe
f.. %ProgramFiles%\Alwil Software\Avast4*.exe
g.. %ProgramFiles%\McAfee.com\VSO*.exe
h.. %ProgramFiles%\McAfee.com\Agent*.*
i.. %ProgramFiles%\McAfee.com\shared*.*
j.. %ProgramFiles%\Trend Micro\PC-cillin 2002*.exe
k.. %ProgramFiles%\Trend Micro\PC-cillin 2003*.exe
l.. %ProgramFiles%\Trend Micro\Internet Security*.exe
m.. %ProgramFiles%\NavNT*.exe
n.. %ProgramFiles%\Morpheus*.dll
o.. %ProgramFiles%\Kaspersky Lab\Kaspersky Anti-Virus Personal*.ppl
p.. %ProgramFiles%\Kaspersky Lab\Kaspersky Anti-Virus Personal*.exe
q.. %ProgramFiles%\Grisoft\AVG7*.dll
r.. %ProgramFiles%\TREND MICRO\OfficeScan*.dll
s.. %ProgramFiles%\Trend Micro\OfficeScan Client*.exe
t.. %ProgramFiles%\LimeWire\LimeWire 4.2.6\LimeWire.jar

Note: %ProgramFiles% is a variable that refers to the program files folder. By default, this is C:\Program Files.

14.. Queries the following values:

"Home Directory"
"NAV"
"Folder"
"InstallLocation"

under the following registry subkeys:

HKEY_LOCAL_MACHINE\Software\INTEL\LANDesk\VirusProtect6\CurrentVersion
HKEY_LOCAL_MACHINE\SOFTWARE\Symantec\InstalledApps
HKEY_LOCAL_MACHINE\SOFTWARE\KasperskyLab\Components\101
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\
Uninstall\Panda Antivirus 6.0 Platinum

and deletes all .exe files found in the folders it locates.

15.. Queries the value:

"Folder"

in the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\KasperskyLab\InstalledProducts\Kaspersky Anti-Virus Personal

and deletes all files found in the folder it locates.

16.. Queries the value:

"Path"

in the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\App Paths\Iface.exe

and deletes all *.exe and *.ppl files in the folder it locates.

17.. Closes windows whose title contains any of the following strings:

a.. SYMANTEC
b.. SCAN
c.. KASPERSKY
d.. VIRUS
e.. MCAFEE
f.. TREND MICRO
g.. NORTON
h.. REMOVAL
i.. FIX

18.. Deletes the values:

These files may also have one the following file names:

ce.. 392315089702606E-02
cf.. Clipe
cg.. Miss
ch.. Photos
ci.. Sweet_09

These file names will be combined with one of the following extensions:

cj.. .b64
ck.. .BHx
cl.. .HQX
cm.. .mim
cn.. .uu
co.. .UUE
cp.. .XxE

If the attachment is a MIME file, it may contain a file with one of the following file names:

cq.. 392315089702606E-02,UUE[BLANK SPACES].scr
cr.. Adults_9,zip[BLANK SPACES].scr
cs.. ATT01.zip[BLANK SPACES].scr
ct.. Atta[001],zip[BLANK SPACES].scr
cu.. Attachments,zip[BLANK SPACES].scr
cv.. Attachments[001],B64[BLANK SPACES].scr
cw.. Clipe,zip[BLANK SPACES].scr
cx.. New Video,zip[BLANK SPACES].scr
cy.. Photos,zip[BLANK SPACES].scr
cz.. SeX,zip[BLANK SPACES].scr
da.. WinZip,zip[BLANK SPACES].scr

db.. WinZip.zip[BLANK SPACES].scr
dc.. Word XP.zip[BLANK SPACES].scr
dd.. Word.zip[BLANK SPACES].scr

The attachment may use the following icon:

21.. Searches the network for the following shared folders, where it copies itself as WINZIP_TMP.EXE:

a.. ADMIN$
b.. C$

Note: The worm also copies itself using the same file name to network shares protected by weak passwords.

22.. Copies itself to network shares as the following:

C$\Documents and Settings\All Users\Start Menu\Programs\Startup\WinZip Quick Pick.exe

23.. Deletes the following file from network shares:

C$\Documents and Settings\All Users\Start Menu\Programs\Startup\WinZip Quick Pick.lnk

24.. Attempts to access the following URL:

[http://]webstats.web.rcn.net/[REMOVED]/Count.cgi?df=765247

25.. Enumerates the computers in the same domain as the host computer by using WNetOpenEnum.

26.. Executes the command "net use \\[COMPUTER NAME] /user:administrator" to connect to that computer.

Note:
a.. If the user on the compromised computer is already connected to some other network computer, the worm will be able to use that connection.
b.. [COMPUTER NAME] is a remote computer name and "" is a blank password.

27.. Attempts to delete the following folders on the computer it connects to:

a.. \C$\Program Files\Norton AntiVirus
b.. \C$\Program Files\Common Files\symantec shared
c.. \C$\Program Files\Symantec\LiveUpdate
d.. \C$\Program Files\McAfee.com\VSO
e.. \C$\Program Files\McAfee.com\Agent
f.. \C$\Program Files\McAfee.com\shared
g.. \C$\Program Files\Trend Micro\PC-cillin 2002
h.. \C$\Program Files\Trend Micro\PC-cillin 2003
i.. \C$\Program Files\Trend Micro\Internet Security
j.. \C$\Program Files\NavNT
k.. \C$\Program Files\Panda Software\Panda Antivirus Platinum
l.. \C$\Program Files\Kaspersky Lab\Kaspersky Anti-Virus Personal
m.. \C$\Program Files\Kaspersky Lab\Kaspersky Anti-Virus Personal Pro
n.. \C$\Program Files\Panda Software\Panda Antivirus 6.0

o.. \C$\Program Files\CA\eTrust EZ Armor\eTrust EZ Antivirus

28.. Attempts to execute the following command on the compromised computer to execute its copy at the end of the hour:

at [COMPUTER NAME] [HOUR]:59 /interactive \\[COMPUTER NAME]\Admin$\WINZIP_TMP.exe
at [COMPUTER NAME] [HOUR]:59 /interactive \\[COMPUTER NAME]\C$\WINZIP_TMP.exe

Note: [COMPUTER NAME] is a remote computer name and [HOUR] represents the hour when propagation begins.

29.. 30 minutes after the worm file UPDATE.EXE is loaded into memory (which could be when a compromised computer is started up or when the worm is executed on a computer), the worm checks if the date is the 3rd of the month. If it is the 3rd of the month the worm will attempt to overwrite files with the following extensions in available drives from A to Z:

a.. *.doc
b.. *.xls
c.. *.mdb
d.. *.mde
e.. *.ppt
f.. *.pps
g.. *.zip
h.. *.rar
i.. *.pdf
j.. *.psd
k.. *.dmp

Note:
l.. The worm will not overwrite files in the first available drive. For example if the first available drive is the C drive, the worm will overwrite files in available drives from D to Z.
m.. The files are overwritten with the following text:

DATA Error [47 0F 94 93 F4 F5]

Symantec Security Response encourages all users and administrators to adhere to the following basic security "best practices":

a.. Turn off and remove unneeded services. By default, many operating systems install auxiliary services that are not critical, such as an FTP server, telnet, and a Web server. These services are avenues of attack. If they are removed, blended threats have less avenues of attack and you have fewer services to maintain through patch updates.
b.. If a blended threat exploits one or more network services, disable, or block access to, those services until a patch is applied.
c.. Always keep your patch levels up-to-date, especially on computers that host public services and are accessible through the firewall, such as HTTP, FTP, mail, and DNS services (for example, all Windows-based computers should have the current Service Pack installed.). Additionally, please apply any security updates that are mentioned in this writeup, in trusted Security Bulletins, or on vendor Web sites.
d.. Enforce a password policy. Complex passwords make it difficult to crack password files on compromised computers. This helps to prevent or limit damage when a computer is

compromised.
e.. Configure your email server to block or remove email that contains file attachments that are commonly used to spread viruses, such as .vbs, .bat, .exe, .pif and .scr files.
f.. Isolate infected computers quickly to prevent further compromising your organization. Perform a forensic analysis and restore the computers using trusted media.
g.. Train employees not to open attachments unless they are expecting them. Also, do not execute software that is downloaded from the Internet unless it has been scanned for viruses. Simply visiting a compromised Web site can cause infection if certain browser vulnerabilities are not patched.

Removal using the W32.Blackmal@mm Removal Tool
Symantec Security Response has developed a removal tool to clean the infections of W32.Blackmal.E@mm. Use this removal tool first, as it is the easiest way to remove this threat.

Note: The threat targets AV products, so if any of the targeted files have been deleted, then the AV product may need to be reinstalled after using the removal tool.

Manual Removal:

The following instructions pertain to all current and recent Symantec antivirus products, including the Symantec AntiVirus and Norton AntiVirus product lines.

1.. Disable System Restore (Windows Me/XP).
2.. Update the virus definitions.
3.. Run a full system scan and delete all the files detected.
4.. Delete any values added to the registry.

For specific details on each of these steps, read the following instructions.

1. To disable System Restore (Windows Me/XP)
If you are running Windows Me or Windows XP, we recommend that you temporarily turn off System Restore. Windows Me/XP uses this feature, which is enabled by default, to restore the files on your computer in case they become damaged. If a virus, worm, or Trojan infects a computer, System Restore may back up the virus, worm, or Trojan on the computer.

Windows prevents outside programs, including antivirus programs, from modifying System Restore. Therefore, antivirus programs or tools cannot remove threats in the System Restore folder. As a result, System Restore has the potential of restoring an infected file on your computer, even after you have cleaned the infected files from all the other locations.

Also, a virus scan may detect a threat in the System Restore folder even though you have removed the threat.

For instructions on how to turn off System Restore, read your Windows documentation, or one of the following articles:
a.. How to disable or enable Windows Me System Restore
b.. How to turn off or turn on Windows XP System Restore

Note: When you are completely finished with the removal procedure and are satisfied that the threat has been removed, reenable System Restore by following the instructions in the aforementioned documents.

For additional information, and an alternative to disabling Windows Me System Restore, see the Microsoft Knowledge Base article: Antivirus Tools Cannot Clean Infected Files in the _Restore Folder (Article ID: Q263455).

2. To update the virus definitions
Symantec Security Response fully tests all the virus definitions for quality assurance before they are posted to our servers. There are two ways to obtain the most recent virus definitions:
a.. Running LiveUpdate, which is the easiest way to obtain virus definitions:
a.. If you use Norton AntiVirus 2006, Symantec AntiVirus Corporate Edition 10.0, or newer products, LiveUpdate definitions are updated daily. These products include newer technology.
b.. If you use Norton AntiVirus 2005, Symantec AntiVirus Corporate Edition 9.0, or earlier products, LiveUpdate definitions are updated weekly. The exception is major outbreaks, when definitions are updated more often.
b.. Downloading the definitions using the Intelligent Updater: The Intelligent Updater virus definitions are posted daily. You should download the definitions from the Symantec Security Response Web site and manually install them. To determine whether definitions for this threat are available by the Intelligent Updater, refer to Virus Definitions (Intelligent Updater).

The latest Intelligent Updater virus definitions can be obtained here: Intelligent Updater virus definitions. For detailed instructions read the document: How to update virus definition files using the Intelligent Updater.

3. To scan for and delete the infected files
1.. Start your Symantec antivirus program and make sure that it is configured to scan all the files.
a.. For Norton AntiVirus consumer products: Read the document: How to configure Norton AntiVirus to scan all files.
b.. For Symantec AntiVirus Enterprise products: Read the document: How to verify that a Symantec Corporate antivirus product is set to scan all files.
2.. Run a full system scan.
3.. If any files are detected, click Delete.

Important: If you are unable to start your Symantec antivirus product or the product reports that it cannot delete a detected file, you may need to stop the risk from running in order to remove it. To do this, run the scan in Safe mode. For instructions, read the document, How to start the computer in Safe Mode. Once you have restarted in Safe mode, run the scan again.

After the files are deleted, restart the computer in Normal mode and proceed with the next section.

Warning messages may be displayed when the computer is restarted, since the threat may not be fully removed at this point. You can ignore these messages and click OK. These messages will not appear when the computer is restarted after the removal instructions have been fully completed. The messages displayed may be similar to the following:

Title: [FILE PATH]
Message body: Windows cannot find [FILE NAME]. Make sure you typed the name correctly, and then try again. To search for a file, click the Start button, and then click Search.

4. To delete the value from the registry
Important: Symantec strongly recommends that you back up the registry before making any changes to it. Incorrect changes to the registry can result in permanent data loss or corrupted files. Modify the specified subkeys only. For instructions refer to the document: How to make a backup of the Windows registry.

1.. Click Start > Run.
2.. Type regedit
3.. Click OK.

Note: If the registry editor fails to open the threat may have modified the registry to prevent access to the registry editor. Security Response has developed a tool to resolve this problem. Download and run this tool, and then continue with the removal.

4.. Navigate to the subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

5.. In the right pane, delete the value:

"ScanRegistry" = "scanregw.exe /scan"

6.. Navigate to the subkey:

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\
Explorer\Advanced

7.. In the right pane, reset the values to the original values, if applicable:

"WebView" = "0"
"ShowSuperHidden" = "0"

8.. Navigate to the subkey:

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\
Explorer\CabinetState

9.. In the right pane, reset the value to the original value, if applicable:

"FullPath" = "0"

10.. Exit the Registry Editor.

Additional information:

High level detection - Here are some symptoms that may help determine the presence of W32.Blackmal.E@mm.

1.. Uses its own SMTP engine to send an email with a copy of itself as an attachment.

Look for non-mail server machines sending port 25 traffic

2.. Enumerates the computers in the same domain as the host computer by using WNetOpenEnum. The worm then executes the command "net use \\[COMPUTER NAME] /user:administrator """ to connect to that computer. However, if the user on the compromised computer is already connected to some other network computer, the worm will be able to use that connection.

Look for locked user accounts due to brute password attacks

3.. Attempts to access the following URL:
[http://]webstats.web.rcn.net/[REMOVED]/Count.cgi?df=765247

Look for any computer that accessed this website. Isolate and use the repair tool or scan with updated defs

Revision History:

a.. February 3, 2006: Minor edit regarding date based payload.
b.. February 2, 2006: Added additional information regarding high level detection.
c.. February 1, 2006: Added reference to date based payload to the short description.
d.. January 31, 2006: Updated alias information.
e.. January 30, 2006: Updated revision history.
f.. January 27, 2006: Added details step 7.
g.. January 24, 2006: Updated alias information.
h.. January 17, 2006: Added link to removal tool.

3002. Non Ham - Petrol news

Yahoo group: m_a_r_s
Date: 2006-05-20 18:03:47 UTC
From: Jaiprakash Pullakudy
Topic: 3002 Message: 3002

Dear Friends!

Petrol in Pakistan Rs17 per liter

Malaysia Rs 18 per liter

In Indiait's 48 per liter

Why this difference in Asiaitself ? World Market CRUDE Oil is not
the reason for this. It's all Gain for private owners? As we are the
general public, or Common Man as R.K.Laxman wud hv said, we have to
raise our voice, let's raise thru Emails.

Forward this to all Indians who care.

IT HAS BEEN CALCULATED THAT IF EVERYONE DID NOT PURCHASE A DROP OF
PETROL FOR ONE DAY AND ALL AT THE SAME TIME, THE OIL COMPANIES WOULD
CHOKE ON THEIR STOCKPILES.

AT THE SAME TIME IT WOULD HIT THE ENTIRE INDUSTRY WITH A NET LOSS
OVER 4.6 BILLION DOLLARS WHICH AFFECTS THE BOTTOM LINES OF THE OIL
COMPANIES.

THEREFORE "Monday May 22nd " HAS BEEN FORMALLY DECLARED
"STICK IT UP THEIR BEHIND " DAY AND THE PEOPLE OF THIS NATION SHOULD
NOT BUY A SINGLE DROP OF PETROL THAT DAY.

THE ONLY WAY THIS CAN BE DONE IS IF YOU FORWARD THIS E-MAIL TO AS
MANY PEOPLE AS YOU CAN AND AS QUICKLY AS YOU CAN TO GET THE WORD
OUT. WAITING ON THE GOVERNMENT TO STEP IN AND CONTROL THE PRICES IS
NOT GOING TO HAPPEN. WHAT HAPPENED TO THE REDUCTION AND CONTROL
IN PRICES THAT THE ARAB NATIONS PROMISED TWO WEEKS AGO?

REMEMBER ONE THING, NOT ONLY IS THE PRICE OF PETROL
GOING UP BUT
AT THE SAME TIME AIRLINES ARE FORCED TO RAISE THEIR
PRICES,
TRUCKING COMPANIES ARE FORCED TO RAISE THEIR PRICES
WHICH AFFECTS
PRICES ON EVERYTHING THAT IS SHIPPED. THINGS LIKE
FOOD, CLOTHING,
BUILDING SUPPLIES MEDICAL SUPPLIES ETC. WHO PAYS IN
THE END? WE
DO!

WE CAN MAKE A DIFFERENCE.IF THEY DON'T GET THE MESSAGE
AFTER ONE
DAY, WE WILL DO IT AGAIN AND AGAIN. SO DO YOUR PART
AND SPREAD THE
WORD. FORWARD THIS EMAIL TO EVERYONE YOU KNOW. MARK
YOUR
CALENDARS AND MAKE SEPTEMBER 22nd A DAY THAT THE
CITIZENS SAY
"ENOUGH IS ENOUGH"

We forward so many junk email to many of our friends,
now let us do
it for some useful cause to cut down the price of the
petrol .. ...

REMEMBER : May 22nd 2006

The International Mumbai YL Meet
The Amateur Radio Society of India is proud to announce that the
International Mumbai YL Meet will be held at the Hotel Intercontinental
Grand, Sahar, Mumbai, from the
26th -29th of October 2006.
This event is held once in 2 years and since 1996 has traveled to all parts
of the world. It is now India's turn to play host to this very important
event.
YLs and OMs are welcome to join this event. The programme is as follows:

Day 1- 26th October 2006:
4pm-6.30p.m : Registration and eyeball
7p.m onwards : Inaugural Dinner followed by Cultural programme

Day 2 - 27th October 2006
9a.m-12.30p.m : Conference and Presentations by YLs
1.pm : Lunch.
Free time for the rest of the day.

Day 3 - 28th October 2006:
9.30 a.m : Depart from Hotel to visit important
establishments and sightseeing
to Elephanta island off the coast of
Mumbai. Return by 5.30p.m
6.30 p.m : Traditional dress evening & dinner.

Day 4 - 29th October 2006
9.30 a.m : Free time for more sightseeing in Mumbai. Dx YLs
leave for Jaipur
from Mumbai Central Train Station in the
evening.

Registration Fees: For Day 1, kit, Day 2 and lunch: Rs. 2000

All are welcome to join activities on Day 3 & 4 with payment at actuals.

Those wishing to stay at the Grand Intercontinental where all the dx YLs
will be staying should inform me immediately to avail of the special rates.
Accomodation elsewhere can also be arranged.

Optional Tours have been organized and they are as follows:
Tour 1
Jaipur-Agra-New Delhi by train and road.
Departure Mumbai 29th October, terminating New Delhi 2nd November 2006.

Tour 2
Goa by air
Departure N.Delhi 3rd November, terminating Mumbai 5th November 2006.

YLs, OMs, SWLs who wish to attend the YL Meeting or join the tours, may please get in touch with me immediately at telephone No: 022 25682361 or at email sarla.yl@...

Thanks,

By Quinn Norton| Also by this reporter
02:00 AM Jun, 05, 2006
Matt Ettus has the sly smile of someone who sees the invisible. His hands fly over the boards of his Universal Software Radio Peripheral, or USRP, snapping them together with an antenna like Lego bricks. Then he plugs in the naked boards to a USB 2 cable snaking to his Linux laptop.
After few minutes of normal Linux messing around ("Takes forever to boot.... Haven't got the sound driver working yet....") he turns the laptop around to reveal a set of vibrating lines in humps and dips across the screen, like a wildly shaking wireframe mountain range.
"Here," he explains, "I'm grabbing FM."
"All of it?" I ask.
"All of it," he says. I'm suddenly glad the soundcard isn't working.
Radio is that bit of the electromagnetic spectrum that sits between brain waves and daylight. It's made of the same stuff that composes light, color, electrical hums, gamma radiation from atom bombs, the microwaves that reheat your pizza.
From our perspective, radio devices behave very differently -- a global positioning system gadget doesn't look like a TV doesn't look like a CB set, even if they are all radios. They are single-purpose machines that use small bits of radio spectrum to do very specific tasks -- about as far from the general-purpose personal computer as you can get. But there's no reason they have to be.
Most of the required components of a radio are the same and can be generalized. And with Moore's law making processors fast enough, much of a radio's function can be done with software.
Building a general radio that can receive and transmit, and attaching it to a software system that can fill in the gaps of what we normally think of as radio, is kind of like the Enterprise's deflector dish: Give engineering 20 minutes and it can do anything the captain needs to move the plot along. One of Ettus' USRPs, with the right daughterboards and radio software, can capture FM, read GPS, decode HDTV, transmit over emergency bands and open garage doors.
The GNU radio project was the brainchild of Eric Blossom, who wanted to create a software HDTV receiver in advance of broadcast flag legislation limiting what hardware was allowed to receive the high-def signal. "We'd just go build one of those things (in software) and moot (broadcasters') control over the hardware," says Blossom.
He teamed up with Ettus, but they lacked a radio platform that was cheap enough to get into many people's hands. They could do a lot with the computer, but there were limits. "How do I get from the antenna into the computer?" explains Blossom. "The computer wants digital samples to work on."
Ettus secured National Science Foundation funding through the University of Utah to design what would become the USRP. "Basically we proposed the 85 percent solution for 10 percent of the price. Given that part of the NSF's charter is about education ... you can get 10 more things in your students' hands for your dollars," says Blossom.
Ettus was drawn more to the technical challenge than the political project.
He wanted to build the HDTV receiver "because it was the Mount Everest ... it was the

biggest receive-only mountain." Decoding HDTV was a political act of radio, but, mostly, Ettus wanted to see if he could do it.
Four years later, Ettus hasn't just decoded HDTV, but has gone on to write software that does far more. He's quit his day job to build and sell the USRP hardware full time -- you can buy it from his website starting at $550 for the motherboard.

Ettus and Blossom's software-defined radio on the cheap is popping up in unexpected places, describing a very different radio world from the centralized model that has dominated radio history.
"Decentralized controls enable innovation at the edge -- it's closer to the computer model," says Blossom. "I think what we'll find is that people will come up with things we never really thought about."
Ettus is more concrete about the project's possibilities. Citing Wi-Fi as an example, he envisions "a world in which bandwidth is not an issue. People will create applications that will use that bandwidth, like complete telepresence."
Ettus paints a picture of radio bringing about a many-to-many revolution, like blogging, but for a wider segment of the world. "It enables everybody to be a broadcaster," he says.
Toby Oliver's business is a great example of the street finding its own use for stray radio waves. His company, PathIntelligence, uses the USRP and GNU Radio to track foot traffic in U.K. shopping centers.
Listening for the control-channel signals of mobile phones allows the PathIntelligence setup to pinpoint the location of a phone using triangulation by measuring the difference in time it takes for the signal from a phone to get to multiple antennas.
This works like a very local version of GPS, allowing shopping-center owners to see what shop windows are most popular, and where people tend to congregate or avoid, without actually intercepting any personal data. It's something that processing speed made possible, and the GNU Radio/USRP project made cost-effective.
"Only recently, in the last 12 months, has computing power enabled me to do what I need to in general-purpose software without the expensive development of dedicated DSPs (digital signal processors)," says Oliver. "It means that a whole world of opportunities for tinkerers like me is being opened up."
A person without a phone is invisible to his system, but with the market penetration of mobile phones in Britain, the occasional outlier doesn't damage the data set much. Shopping centers are showing a lot of interest in the information.
But despite his new job, Oliver's background isn't in radio. "In some ways, (software-defined radio) enables the arcane world of RF (radio frequency) to be available to software developers. So you will start to be able to do more and more 'mashups' to RF," he says.
The USRP is being put through its paces in research labs and amateurs' basements all over the world. Ettus sells to companies and governments. Some radio sets out there do more, but Ettus claims that generally the USRP costs a tenth of other software-defined radio-ready equipment. He continues to work on the USRP, developing better signal intelligence and more diverse daughterboards to tune to different bits of radio spectrum.
Blossom is working on a passive radar system that will require a more sensitive hardware setup than the current USRP. His passive radar reads in the ambient radio waves from existing sources, like FM stations and cell towers, and uses them to build a map of the area. At the end of his research, he plans to have "this little gadget that you can plug into a laptop and see what's flying around. We're hoping to see stuff on the order of 50 to 70 kilometers away."
Neither Blossom nor Ettus can predict how their next projects will be used. But that's the point.

Talk is cheap. Use Yahoo! Messenger to make PC-to-Phone calls. Great rates starting at 1?/min.

3013. SOS on Flooding.

Yahoo group: m_a_r_s
Date: 2006-06-30 03:14:26 UTC
From: Jaiprakash Pullakudy
Topic: 3013 Message: 3013

Dear Hams:

It's Season of Rains and Floods. In Mumbai we all face flooding problem everywhere, however showers are moderate.

I request all hams TO BE ON AIR at all times during rains.

We may be of help to pass on communication to near and dear of our ham community as well as help other Hams working on DMP.

All modes of communications can fail and also electricity during any 26x7-2005 type flooding.

We hams should be proud that we can work for more hours due to power back-ups etc.

HENCE REQUEST, ALL HAMS TO BE PRESENT ON AIR AT ALL TIMES DURING THIS SEASON.

We say Ham's as "Help All Mankind". So please keep this in mind and help.

I am sure my message is clear to all. Keep the band active.

Do join Night Owls net for more information.

3020. HANDLING OF THIRD PARTY MSGS

Yahoo group: m_a_r_s
Date: 2006-07-14 08:42:28 UTC
From: Basappa Arabole
Topic: 3020 Message: 3020

Some of our fellow HAMS rushed to the disaster sites on that deadly day.
Some given instructions to the new boys to go close the scene.
We all required to read the Amateurs Rules once again.
I would like to mention few things here for those who are new :

Handling Third party Messages : In case of failure of normal telecommunication facilities, Amateurs are permitted to handle third party messages, relating to natural calamities such as earthquake, floods, cyclones and wide spread fires, originating from and addressed to a competent civil authority namely:
(a) District Magistrates or Deputy Commissioners or Collectors of the district and
(b) Any other officer authorised by authorities mentioned at (a) above.
The licensee shall inform by letter addressed to the licensing authority regarding the use of his amateur station for such purposes on each such occasions.

Temporary Change of Location : Amateurs are required to take permission from the WPC well in advance as per the rules.

In any types of emergencies, if HAMs wanted to render communication assistance,
(a) The govt. may call you for providing communication. (b) if you are voluntarily going to the scene of action, they should report to the Government authorities in that location and upon getting the permission from them (Written will be best preferred) they should start the radio communication. I remember my club friends from Mumbai i.e. VU2NLF and group went to Gujarat (During earthquake) on their own and they reported to the authorities. They (we all) provided the best possible communication to the govt. of Gujarath.
PSE DON'T get in to trouble.

Enjoy your HOBBY.

Dear Basappa & MARS friends,

Being young and energytic, kindly note that Amateur (Ham) Radio is only hobby and whatever humanitarian assistance provided out as Emergency Communication needs backing from District Authorities (whenever so possible) - Since the 3rd Party message only when the normal telecommunication facilities fail and only thru DC/DM of your District, hence, as Basappa points do not get stuck by going against the rule book when it is Man-Made Disasters especially Terrorism in compaired to Natural Disasters.

Subject: -.. . ARSI * Using Airmail for finding propogation

Hello All.

Airmail is a mail program that lets you send e-mail via HF radio using Pactor. However even if you do not need that, it has a component to see what propagation is to various parts of the world so that you can plan when you want to be on air for some DXing even during very poor conditions.

Any ham can download Airmail from

http://www.airmail2000.com/

After you run the setup and enter your Callsign, location etc, you should also download the propagation programme which is also available on the same site and set it up in the same directory as Airmail.

When you go to view/propagation it shows a list of stations and by clicking on any of them you will see the propagation predictions to that area. It is pretty accurate and very useful for us hams.

Give it a try

The ARSI will be conducting the ASOC exam in Thane, Mumbai.

Probable date of exam: 27th, 28th or 31st of July 2006.
Last date of confirmation of participation 16th July 2006.

Date of attestation of certificates, form filling: 20th July 2006
Venue : Hotel Sharanam, Eastern Express Highway, Thane.

All help will be provided in attestation and form filling.
Costs incurred: Rs 300 per person which includes the exam fees,
breakfast,
lunch and tea and snacks

Those staying in and around Mumbai and neighbouring areas who wish
to avail
of this opportunity, may please confirm with me via
email-sarla_sharma@... or Phone 022 25682361.

Kindly note that the exam will be conducted ONLY if we have a
minumum of 20
participants.

Thanks,
Mrs Sarla Sharma
Vice President ARSI

Dear Mumbai Friends,

Thanks for VU2HIT for reposting this msg. Kindly see that IARU
Region 3 Secretary has also acknowledged the message.

I am looking out for the video clip of this on CD if any of you have
made the recording.

3030. Mumbai A R Service - BMC's call

Yahoo group: m_a_r_s
Date: 2006-07-23 02:56:27 UTC
From: Basappa Arabole
Topic: 3026 Message: 3030

Hello all friends,
It is understood from other sites , OUR HAMS WENT TO THE BMC and disaster SCENES, AFTER RECEIVING CALL FROM BMC. It is really a wonderful job done by all those who got involved.

Now THIS is the time for the group leaders to conduct HAM RADIO AWARENESS in different areas.

We all get ready with our rigs tested, to answer the calls of govt AGENCIES.

IT WAS WONDERFUL JOB BY ALL THOSE WHO GOT INVOLVED IN THE RECENT CALL.

Dear Mumbai Friends,

Sorry to read this article

http://www.mumbaimirror.com/nmirror/mmpaper.asp?
sectid=2&articleid=723200623194479672320062318446 71#

Well, this article will ensure the Government of India - Monitoring Organisation of WPC throughout the country to enforce their working.

Hams keep your station registers intact - Log Sheet, Equipment Registers, Licence copy (check any change in QTH - Renewals)

It does not apply to Mumbai Hams alone but to all of us in our country - Not a Nice Article to circulate and not a good thing Hams can boast about.

When giving nice information about volunteer service renered by good hams for public service be careful of giving them this sort of information (which may be true !!!) the media loves this sort of sensation information for wider publicity - so BEWARE WHEN GIVING SUCH INFORMATION TO MEDIA - Yes, they do read between lines and put such News of bad taste.

Dear Mumbai Friends,

Wake up the Scouts/Guides out there for participating in the 3rd Asia Pacific Regional Jamboree on the Internet / Air on 5th and 6th August for an not so popular event as we always wait for October for our regular JOTA/JOTI.

Here is the link for details
http://www.apr.scout.or.jp/documents/circular.htm
click on
3rd Asia-Pacific Regional Air/Internet Jamboree
4-2006, 31 March 2006

Here at Bangalore we would be having VU2LCI representing Chamundi Scouts Group and VU2GOP from SJR Public School - soon we will have the list growing.

Anticipate this message is circulated amongs hams and Scout friends so that you would be on band.

Drop cell, use Radio

Rate This Article Comments View Comments --> While The ATS was busy monitoring mobile phones and landlines, terrorists fell back upon wireless communication on VHF/UHF

Ashish Khetan

Intelligence officials are beginning to suspect that the terrorists involved in the July 11 Mumbai serial blasts left the state police and the elite Anti Terrorist Squad (ATS) clueless about their plans by discarding mobile phones and landlines. Instead, they may have communicated in a scrambled mode using wireless radio sets in the ultra high frequency (UHF) and very high frequency (VHF) ranges.

The reason for their suspicion is a tip-off by a private networking solution provider that he had witnessed an unusually high volume of communication signals in a scrambled mode in the UHF and VHF ranges while installing broadband networking system in Aurangabad in May this year.

Such signals are difficult to monitor or eavesdrop on.

?Though the system is not entirely secure, it does cut down on the ability of most eavesdroppers to listen in,? said an intelligence official.

Government monitors use of VHF. Police and defence establishments use it and so do FM radio stations (88?108 Mhz). ?But the local police do not have the means to monitor airwaves and ascertain if somebody else is also communicating using this frequency illegally,? said the official.

?Since we only keep mobile and telephone communication under surveillance, the terrorists may have resorted to the use of radio hand sets with conversations in scrambled mode,? said the officer.

WHAT IS VHF & UHF?

Very High Frequency designates electromagnetic waves whose frequency is between 30 Mhz to 300 Mhz.

Ultra High Frequency designates electromagnetic waves whose frequency is between 300 mhz and 3.0 Ghz

VHF and UHF signals are transmitted through air waves. They can be obstructed by mountains and, hence, need repeater stations to be transmitted over longer distances.

VHF is ideal for short distance terrestrial communication. Hence, they need repeater stations at frequent intervals to send signals over long distances.

VHF is not much affected by atmospheric noise and interference from electrical equipment, as compared to lower frequencies. It can be blocked by land features like mountains, but not buildings and other such structures.

A FAVOURITE WITH TERRORISTS

US security agencies recovered reading material on ?understanding amateur radio? from terrorists after the September 11 attacks on the WTC twin towers in New York.

Terrorist organisations like Lashkar-e-Taiba (LeT) and Jaish-e-Mohammad (JeM), based in Pakistan-occupied Kashmir and operating in Jammu and Kashmir (J&K), are known to use communication equipment of Japanese and US make. They mostly use VHF (Very High Frequency)/UHF (Ultra High Frequency) for intra-regional communication. They have set up communication stations (repeaters) in the Pir Panjal mountain range, which lie between PoK and J&K.

The IB believes that Naxals in Andhra Pradesh, Chhattisgarh and Madhya Pradesh also have gained expertise in using VHF and UHF for intra-regional communication.

dear santosh
thanks for teaching me how to use a multi meter in the train 2 years back .

also thanks for that article about mumbai mirror vhf /uhf
well the goverment should do something about it .

if i am not mistaken even during the mumbai riots an article came in the
paper how the wrong people were using the govt issued freqency for their
horrible needs

well lets hope .

Dear Basappa & MARS friends,

Being young and energytic, kindly note that Amateur
(Ham) Radio is only hobby and whatever humanitarian
assistance provided out as Emergency Communication
needs backing from District Authorities (whenever so
possible) - Since the 3rd Party message only when the
normal telecommunication facilities fail and only thru
DC/DM of your District, hence, as Basappa points do
not get stuck by going against the rule book when it
is Man-Made Disasters especially Terrorism in
compaired to Natural Disasters.

de Lion Ajoy - VU2JHM
Disaster Communication Co-Ordinator,
Amateur Radio Society of India.

From: Lion Ajoy
Topic: 3020 Message: 3036

Dear Zyros - VU2ZRS,

Thanks for your email, I am herewith replying so that my friends would go thru...

Please read the Official Rules & Regulations again

" 18. Portable and mobile amateur station:
Without prejudice to rule 17, the Central Government may in addition to an amateur station licensed for a specified location issue a special authorisation to establish, maintain and work an amateur station as a portable station or a mobile station fixed on board a motor vehicle for a specific period in special occasions like exhibitions and jamborees or for specific technical investigations in radio if-

(i) application for such authorisation is made well in advance indicating, among others, the specific period for ......PLEASE READ FURTHER IN THE BOOK "

that is for change of location even for temporary operation

When it comes for Disaster Communication Handling

Under the "CONDITIONS FOR THE CONDUCT OF AMATEUR WIRELESS TELEGRAPH STATION"
Sub-Conditions Under Messages :
ii. Notwithstanding clause (a), sub-condition (1) and clause (d), sub-condition (2) the licensees in case of failure of normal telecommunication facilities, are permitted to handle third party messages, pertaining to natural calamities such as earthquake, floods, cyclones and wide spread fires, originating from and addressed to a competent civil authority namely, (a) District Magistrates or Deputy Commissioners or Collectors of the district and (b) any other officer authorised by authorities mentioned at (a) above. The licensee shall inform by letter addressed to the licensing authority regarding the use of his amateur station for such purposes on each such occasions.

SO GOING BY RULE BOOK WHICH IS IN FORCE AND NOT FURTHER AMENDED, MODIFIED SO FAR - THIS IS WHAT IT IS.

So when meeting the Media (News Paper/TV) be very careful when you say you did come out Volunteered to help on Humanitarian Grounds - Please do it with lower key - especially when it comes out in Newspaper as Bad Article such as what appeared in Mumbai-Mirror, the local monitoring Stations are going to be taken into task on their everyday work - How many pink letters is issued for so many everyday mistakes we conduct - knowingly or unknowingly. Common mistakes we Bangalore Hams have received pink letters are
1. Not using full callsign Instead of VU2JHM, I use 2JHM or just JHM - on our local VHF repeaters
2. Using non-standard phonotics for Juliet Hotel Mike - I say Japan Honolulu Mexcio.... my other senior fiend like to say Sugar Easy (VU2SE) or Alpha Ocean (VU2AO) not just at callsign but when spelling out his handle -Sure you are seeing the AD on TV of Naukari.com of HARI SADU !!!
3. How many are writing log of everyday VHF QSOs
4. Equipment Register with details of whome you bought your equipment and whome you sold it, for common the details of import
5. Station Registers - as Rules & Regulation book (normally a copy is there in callbook) - etc.

So if a fault has to be got out from anybody - there is no problem - so why wake the sleeping dog.

de Lion Ajoy - VU2JHM
Mumbai Amateur Radio Society - Life Member.

Hello Zyros and all FRIENDS.

It is nice to hear so many things coming out on rules and regs.
It is all Revision for us.

We all know disasterous never come by telling.

In such unexpected situations , I feel :
1. We hams (better to be in group) should approach the authority concerned in LA and inform them about our capabilities, Upon acknowledgement from them and with their go ahed (Under the LA's control) we split up as per their requirement (Our Team Leader remains in their C/R) and start providing VHF/HF communication. I would like to mention that .. Our team leader not necessarily be Senior HAM but knows the area of operation, Locality, Liasioning with the Authorities, convencing the authority, who is known to many (atleast few top brass in the area or in the C/R). I don't mind working under a very Junior HAM in C/R, who has all those qualities as mentioned above. Hai !! Hai!! .

2. The Local club in-charge or in-charges keep good liasion with the govt. authority. THEN approach /write a letter to WPC for blanket permission for such situations. The letter could be written by a group leader/leaders (I suggest a single leader for whole of Mumbai and adjoining area) (BUT I AM AFRAID THIS MAY NOT BE ACCEPTABLE BY ALL). Also request WPC for permitting all HAMS to carry VHF/UHF handies with them.

ONLY CONSTRUCTIVE SUGGESTIONS/COMMENTS EXPECTED FOR THIS MAIL.

Tnx for reading this mail.

Dear Friends,

Nice to see the discussion is still on - this is the healthy way of understanding.

Do not do things too much - what I mean is do it as a Volunteer if you have spare time or when it is required most !!!!

Please understand What is a Disaster ? and not land up into helping every small/big accidents which happens on everyday basis - like 10 - 15 people land up into EVERY big hospital EVERYDAY in Emergency/Casuality Ward not just in Mumbai / Delhi / Kolkatta / Bangalore - say any city - Setting up a Ham Radio Station there would mean asking for Burning up your Volunteer resources, if this is going to be training batch for Young Hams for short durations - Go for it - but do not land up on permenant situation solution - as the Landlines are working !!! so there would be no need of Third Party Messages - blanket permission - ESPECIALLY IF IT IS A PRIVATE HOSPITAL WHO CAN GO FOR THEIR OWN PRIVATE COMMERCIAL WIRELESS SYSTEMS AND WIRELESS OPERATORS TO HANDLE THEIR EVERYDAY BUSINESS (not called Service !!!)

So, Do rethink being Amateur (Ham) Radio Volunteers passing everyday messages like "O Positive Blood Doner required in XYZ Hospital, ABC Hospital and XC3 Hospital" that is not the end of today, tomorrow list of same group will follow.....

Dear Zyros - VU2ZRS and my friends,

You are very right that you cannot think of applying for permission for real disasters - but when you have operated on behalf of Deputy Commissioner/District Collector the WPC has to be intimated on every such occations - that is what the rule says.

I do not know if you have seen the WPC's circular for Amateur (Ham) Radio operation in Andamans - soon after the Tsunami - Here is the link kindly see to this link

http://www.wpc.dot.gov.in/
http://www.wpc.dot.gov.in/DocFiles/circularpage.htm

Your comments and discussion - I am sure the group is reading this...

Basappaji - VU2NXM to take over.

HELLO FRIENDS,

WPC SENDS BLANKET PERMISSION LETTERS/FAX TO CONCERNED CLUBS AND
TEAM LEADERS OF DX PDETIONS FOR PROCEEDING TO THE SCENE OF DISASTERS
WHEN NECESSARY.
ARSI AND FEW OF US RECEIVED FAX MSG TO GO TO A & N DURING TSUNAMI.

ALL WE RECEIVED ON OUR FAX NOS.

MAY BE WE SEND OUR CLUB FAX NOS(let it be C/O) AND TEL NOS. TO WPC
FOR FUTURE USE.

THIS is GOOD SITE FOR DISCUSSION. HI !! HI !!

I ALSO REQUEST ZRS or any one to conduct a small workshop on disaster
communication for HAMS and SWLs in and around Mumbai

dear FREINDS
i agree with the goup not to give communication like lion ajoy had already said
but if it is some thing very urgent and the time is more pricious and a large mob is suffering then we should always go in .
i.e. like bomb blast or huge epidemic like plague or the same sort of emergency were time is precious
its my point may be I may be rong But still

Topic: 3047 Message: 3047

Visual Analyser 8.14

for Windows (95/98/Me/2000/XP)

PC Oscilloscope And Spectrum Analyser

A complete professional real time software transforms your PC into a complete set of instruments; no new hardware necessary (you can use the Sound Card of your PC).

http://www.sillanumsoft.com/

Visual Analyser is a freeware program that monitors the audio coming into and going out of your PC and displays the results on your monitor screen in a very fair representation of proper stand-alone test instruments.

Hope you will find this useful.

Best Wishes,

Harsh Vardhan

Subject: [SPAM] [VUHams] Grid Squares using Google Maps

Laurent, F6FVY, has programmed a tool based on Google Earth so that you can click on any spot in the world and automatically the corresponding full grid locator is being displayed. Just go to http://f6fvy.free.fr/qthLocator/fullScreen.html and adjust the map to the desired resolution. Then just click on the spot you want to know and a small window pops up with longitude, latitude and...ww-grid.

Subject: Re: [echolink] Re: Remote access to Radio

HI,

I have done something similar, but it has nothing to do with echolink. But it does require two computers.

I have software on my radio computer that controls the radio. I use TRX-MANAGER, but there are others.

From my laptop, over my wireless, or from a hotel room in Beijing, I connect to my radio pc using logmein (www.logmein.com) with their free remote desktop software. Once connected, I am controlling the radio pc and controlling the radio. (I have this also on my general pc and I can remotely help my wife when she needs a bit of assistance.)

I set up both computers each with their own Skype account, more free software. I set Skype on my radio pc to automatically answer the call. Now I have audio linked. I may add a web cam to the radio pc, then I could see the hamshack too!

I use the Skype audio link to pass audio back and forth between the pcs for voice modes. Since my radio is a TS-2000 I can run HF/VHF/UHF. I can run MMSSTY, MMTTY, and Digipan on the radio pc, remotely for digital QSOs. With the digital modes the skype is providing audio for monitoring, but not for transmission.

I just added a simple relay board on the radio pc's parallel port connected across my antenna switch to change antennas. Next is to add the serial interface into the rotator so that I can turn that. I am also looking at the Array Solutions Powermaster SWR meter with its pc software to monitor the xmitter output.

I also use QuickMix, to store and recall sound card setting.
www.msaxon.com/quickmix/ This makes it easy to have the sound card mixer set for each mode and be able to recall the settings by opening a file.

If I forget to set something on the radio computer, I have full control. The only thing I can't do is turn the radio pc on remotely! Does anyone know an easy way to get WakeON lan to work over the internet?

This may be way beyond what you are trying to do, but is lots of fun.

Hello ALL,

You may find this interesting.

Dave Freese has just released version 1.2 of Fldigi, a popular new program for Linux and FreeBSD which enables amateur radio operators to join their radios and their computers at the hip and create a new kind of ham shack: a digital ham shack. Here's the story behind both the rising popularity of "sound card" digital modes in amateur radio and how Fldigi lets you enjoy enjoy them on Linux.

Dear JPN,
Its common on ebay that rare QSLs on auction. If this is actually your QSL, i think reciever is no longer interested in keeping the stock with him. (but it dates back to 1980, were you licensed then?!)

JR1BMU Akihiro Aoki, had this call sign when he was in serving in Delhi for Japanese Foriegn Service.

I think VU2JPN was reissued to you by WPC after Akihiro surrenderred his ticket.

I don;t think there is anything to be concerned. Good info about JR1BMU can be found on QRZ.COM

Tnx. I knew its old user vu2jpn's qsl card.

I had a chat on 25/1/07 with vu2rak om rakesh from New Delhi who had helped these Japanese guy to get the Indian callsign during 1980 and later on surrendered.

I was much interested to get the seller on ebay who included these qsl card on sale.

Surely of no concern but I want to have info for my knowledge. I knew I am the second user of vu2jpn since 1997 and some one had earlier operated as vu2jpn during 80's since his contacts records where found during google search for vu2jpn.

Thank you kiran for letting me know the orignal old user of vu2jpn - JR1BMU Akihiro Aoki -

73's have a nice time and hope you are still available on echo link.

3072. Revised ARRL Band Chart available (Feb 22, 2007)

Yahoo group: m_a_r_s
Date: 2007-02-26 10:54:34 UTC
From: HVK
Topic: 3072 Message: 3072

A new ARRL band chart reflecting all changes to the FCC Amateur Radio Service rules as of February 23, 2007, is available for downloading on the ARRL Web site in either black and white or color versions. Created by ARRL Senior Technical Illustrator, Dave Pingree, N1NAS, the attractive new chart represents a major change from earlier designs. This is the same chart featured in the eight-page "Welcome" tear-out section in March QST (following page 48). The entire QST tearout also is available for downloading in PDF format.

http://www.arrl.org/FandES/field/regulations/bands.html

Date: 2007-03-27 06:44:23 UTC
From: Ajoy
Topic: 3075 Message: 3075

Dear Friends,

This is not an advertisement but for information so that your kids, grandkids become more active outdoors.

Kindly visit this url http://www.kmaindia.org and look into the Summer Camp for 10 to 15 Yr from 11th Apr to 16th Apr 2007 at Kollur and for those who are looking in for serious mountaineering stuff the following are the 2007 plans of Karnataka Mountaineering Association where I have been Life Member for more than three decades, this KMA is affliated to Indian Mountaineering Foundation, National Adventure Foundation and GETHNAA of Karnataka.

1. Climbing Expedition to Mt.Stok Kangri in Ladakh Region (20,450 Ft) 23th June to 11th July.
2. Trekking Expedition to Hampta Pass in Himachal Himalayas 21st May to 5th June 2007.
3. Trekking Expedition to Sundherdhunga/Sukhram Glaciers in Kumaon - Uttarkhand Himalayas
4. Trekking Expedition to Valley of Flowers and Hemkund Sabib in Garhwal Himalayas from 6th July to 20th July.
5. Trekking Expedtion to Kalindi Pass in Uttaranchal during Aug/Sep
6. Trekking Expedtion from Darcha to Lamayur in JK Himalayas in Sep/Oct.

Since the above programs are on First-come-first Served basis, do hurry up and contact the organisers.

WANDE MATARAM

06/04/07

Respected ARES seniors,

Since last after the 11/7 incident none of the ARES meeting has been taken, all the knowledge what we are given is on standby, we need to check our gears also make a list of the gears with the team and can try to increase them.

The main purpose to come out of the sleep was:

Very sorry to say that some person has predicted a huge earthquake in or near Bombay,
May god make his prediction wrong, but then to I would prefer to DIG A WELL BEFORE FIRE.

May be I may be wrong and maybe too foolish to trust a person but then too I don't see any harm to brush up all the knowledge, systems and have a mock drill . what I have suggestion in my mind:
Having a meeting of old new ARES members.
Going for a mock drill with required gears
Making teams
Locating locations
Having some body that has to manage the ARES.(HOD)
Suggestions from other members.
Training of the new batches who are interested in ARES.
Etc etc etc etc

This is what I think please guide if there's some thing wrong.

Please reply with suggestion with suitable time for the above things.

WANDE MATARAM

Topic: 3079 Message: 3079

You can send blank emails to our yahoo group and change your settings. These emails need to be sent from your id that is subscribed to the groups.

For individual emails to be received as they were sent from the sender send
a blank email to
m_a_r_s-normal@yahoogroups.com (I would recommend "digest" and "traditional" settings -see below)

For other such commands send a blank email to
the above id by replacing the word after the hyphen as below

digest = converting all emails of the day to a single email in a
digest format
fullfeatured = to include the hajaar garbage and masala text that comes with
the current mail (most of you are currently in this mode - I suggest you change to
traditional and see the difference- you can always change back)
traditional = to remove the hajaar garbage and masala text
nomail = to switch off receiving mails when you are on vacation (you can
still read them at www.groups.yahoo.com/group/m_a_r_s/messages)

unsubscribe = to remove your existing id from our list
subscribe = to join our group with another id
(use this pair to change the id where you want to receive mails -
caution ---> do the unsubscribe first)

Note that I have disabled all attachments so if you want to share an
attachment you have to upload it in the files section of our group here -
www.groups.yahoo.com/group/m_a_r_s/files

When you want to reply to the group, ensure that the "To" address on your screen is
m_a_r_s@yahoogroups.com

Have fun,
de
VU2NHR

31.05.07

Respected HAMS,

I had been to KUTCH & various places in GUJRAT. During this visit I just thought of some changes to be made in the 2 meter communication practices.
This is my thought from my no of experiences.
During my stay in KUTCH there was no activity.

But while back I visited AHEMADABAD, GANDHINAGAR, BHARUCH, and BULSAD.

We have hams in all this areas having communications on individual frequencies,
For example GANDHINAGAR 145.400 ☐ shift.

Since I am using GP300 programmed handy I was not able to trigger repeater.
And again to know the frequencies I had to call vu2cpv from my cell.
Apart from all this touch wood there was no need to give any distress call.

Not joking but a very serious thought came that god forbids if some thing happens and some body as per the protocol gives a distress call on 145.500 every body knows is a disaster frequency no body is there to listen the SOS. All the repeaters are on different frequency and even the simplex conversation are on different frequency so the person will not get any help and .

CAN WE

Change all the repeaters of INDIA on the same frequencies 145.500 ☐ shift.

We may have some problems like the Bombay, Thane, Pune repeaters will get some problem but if we try we can get solutions to that, we have lots of experts like IIA SFN UGO NLF etc.

All the simplex conversation should be on the same frequencies 145.500

Temporary going to other frequencies when this is busy all together a different issue but when no conversation receiving should be ON on 145.500.

This will help us a lot when ever somebody is going to any city where there is HAM population he has to just tune 145.500 he is in business and any type of SOS will be received in the respective range. And as

far as repeaters QRM is concerned if every body is convinced there will be surely some solution.

Dear hams this is my thought, may be I may be wrong what I think is just from my no of experiences during every disasters I worked (EVEN WHEN I WAS NOT A HAM)

So please consider the thought and reply with your view because learning is a continuous process and may be you can teach me some thing new and even correct me where I am wrong.
This topic was even discussed with vu2cpv when I had a eyeball with him during my visit at GANDHI NAGAR.

Please reply

Dear Friends

June 16, 2007 - CQ KID'S DAY

Let's have KID's QSO on June 16, 2007.

As we have lots of hams and activities on air now on 2mtrs, I request all to make this day Mumbai KID'S QSO on 2mtrs a success.

So do bring Harmonics and their friends too on air on 2mtrs may be from 2100hrs to 2300hrs on Mumbai as well as Thane Repeaters and let them also check into Night Owls' Net.

73's de vu2jpn

Dates: January 7, 2007 and June 16, 2007.

June QST Story (PDF)

http://www.arrl.org/FandES/ead/kd-rules.html

CQ KID'S DAY DE WA9LGQ

Fun was the apparent result of a successful recipe--a recipe that included lots of preplanning, food, and Ham Radio. At the Indianapolis the Red Cross Chapter house, the Red Cross radio disaster group sponsored its very first Kids Day event. [Full Story] Time: 1800 to 2400Z. No limit on operating time.

Suggested exchange: Name, age, location and favorite color. You are encouraged to work the same station again if an operator has changed. Call "CQ Kid's Day."

Suggested Frequencies: 28350 to 28400 kHz, 24960 to 24980, 21360 to 21400 kHz, 18140 to 18145 kHz,14270 to 14300 kHz, 7270 to 7290 kHz, and 3740 & 3940 kHz. 2-meter repeater frequencies with permission from your area repeater sponsor. Observe third party traffic restrictions when making DX QSOs.

Reporting: Logs and comments may be posted on the Internet. Those without Internet access may forward comments to the Boring Amateur Radio Club (address below).

Awards: All participants are eligible to receive a
colorful certificate (it becomes the child's
personalized sales brochure on ham radio). You can
download this certificate for free, customized with
the kids' names, after filling out our Kid's Day
Survey, or send a 9 X 12 SASE to: Boring Amateur Radio
Club, PO Box 1357; Boring, OR 97009. More details may
be obtained by joining the Kid's Day Reflector.

Dear Ziros

KID'S DAY MESSAGE I got it today 15/06/07 morning.
It's a short notice to inform all and also could not
check into Night Owl's net today.

May be I will be on Air from 2100 to 2300 IST on June
16, 2007. In case Kids comes in can have QSO and also
I will inform Wispi to check the kids into Night Owl's
net.

Hum hai na, say Hams!

When the weather gets bad, Mumbai's Ham radio operators get cracking

REAGAN GAVIN RASQUINHA Times News Network

When it rains, it certainly does pour. And Mumbai has seen ample evidence of that old maxim. While the city is slowly getting back to normal, with a brief respite from the rains, the weather forecast for the days ahead is literally a gamble. But Mumbai's Ham radio operators, who quietly, resolutely and efficiently were in their element during the weekend's downpour and floods, are unperturbed. Operating from town till Thane, Zyros Zend (call sign vu2zrs), Huzefa Merchant (vu2hit), Girish Shukla (vu2lnz) and Ankur Puranik (vu2axn) from the Mumbai Ham Radio Association were out
in the field, doing their bit for the safety of the public.
As soon as ominous rumblings were heard on Saturday, the group convened. "We met in the morning and prepared ourselves for the day. In the monsoon, there's bound to be floods and chaos. Fortunately, mobile phone services were not hit on the weekend. We started from Nariman Point as our control station is in Colaba," says Ankur. They don't rely on the bulletins of the Meteorological Department (at Navy Nagar) for weather updates. Hams get their own weather images via satellite. "We had Hams sitting in the disaster control cells at Mantralaya, in the BMC and NMMC (Navi Mumbai Municipal Corporation)," says Zyros.
But in an era of cellphone technology, how do these widely dispersed Ham operators do their job? What is their utility? "Unlike cellphones, Ham radios never get jammed. One of us sits with the BMC, another at the NMMC (Navi Mumbai Municipal Corporation) and the other with the Fire Department. We have other Ham operators with handsets roaming the city in a radio-equipped vehicle. These people radio information about which areas are flooded, where a tree has collapsed or where people are stranded. Then, the BMC, police or Fire Brigade sends a team out there. Basically we help the authorities, functioning as extra manpower and relaying emergency messages," says Zyros.
Adds Ham operator Girish
Shukla, who was also in the thick of things on 30/7, "One of our Ham friends, Mahesh Watkar (vu2iia), provided an important service by downloading satellite weather images for us from the internet and giving it to the authorities. This information is separate to that obtained by the weather bureau."
While the Meteorological Department at Navy Nagar cautions of "intermittent heavy to very heavy showers in parts of the city and the suburbs with strong gusty winds" over the next few days, the Ham operators continue to monitor their satellite images as well as the data that they gather from the field. The Hams advise, "We get satellite images twice a day. But the weather could turn suddenly. So take precautions," warns Zyros.

Hey guys who want maps (whether colour or black and white),

I've got news for you.

1. Less than 10 of you are sending mails to a huge group of people.
2. Typically the first mail should read - I am co-ordinating this activity - these are the details - whoever is interested email me OFF-LIST ON such-and-such email id.
3. The guy who sent the email in #2 above sends a cc to all who email him and all subsequent discussion can be executed by using the "Reply All" button.

Now one more email that is not meant for ALL on this list is going to cause something somewhere to be struck by lightning! :)

regards,
Nirav

ps: For those who did not understand any of this, email Zyros to HIS email id and I am sure he will use his cc function.

3093. 2007 IARU HF WORLD CHAMPIONSHIP CONTES

Yahoo group: m_a_r_s
Date: 2007-07-09 02:15:38 UTC
From: Jaiprakash Pullakudy
Topic: 3093 Message: 3093

2007 IARU HF World Championship Contest Rules
ARRL Contest Branch ? General Rules ? HF Rules

Organized and administered by the ARRL on behalf of
the IARU
1. Eligibility: All licensed amateurs worldwide.

2. Object: To contact as many other amateurs,
especially IARU member society HQ stations, around the
world as possible using the 160, 80, 40, 20, 15 and 10
meter bands.

3. Date and Contest Period: The second full weekend of
July, beginning 1200 UTC Saturday and ending 1200 UTC
Sunday (July 14-15 2007). Both Single and Multi
operator stations may operate the entire 24-hour
period.

4. Entry Categories:
4.1. Single Operator
4.1.1. Categories
4.1.1.1. Phone only ? High, Low and QRP power
levels
4.1.1.2. CW only ? High, Low, and QRP Power levels
4.1.1.3. Mixed mode ? High, Low and QRP Power
levels
4.1.2. One person performs all operating and logging
functions.
4.1.3. Use of spotting nets or packet is not
permitted.
4.1.4. All operators must observe the amateur radio
regulations of their country at all times.
4.1.5. Single operator stations are allowed only one
transmitted signal at any given time.

4.2. Multi Operator, Single Transmitter, Mixed Mode
only
4.2.1. Must remain on a band and mode for at least
10 minutes before changing bands or modes.
4.2.2. Only one transmitted signal is allowed at
any given time.
4.2.2.1. You are not allowed a second radio that
works only multipliers.
4.2.3. All operators must observe the amateur radio
regulations of their country at all times.
4.2.4. Violation of the band change rules will

reclassify the entry as a checklog.

4.3. IARU Member Society HQ Station
4.3.1. May have only one transmitted signal per band mode (160 CW, 160 Phone, 80 CW, 80 Phone, 40 CW, 40 Phone, 20 CW, 20 Phone, 15 CW, 15 Phone, 10 CW, 10 Phone) at the same time.
4.3.2. All stations involved in an HQ operation must be in a single ITU zone.
4.3.3. Only one HQ station callsign per member society per frequency band is permitted.
4.3.4. All operators must observe the amateur radio regulations of their country at all times.

5. Contest Exchange:
5.1. IARU member society HQ stations send signal report and official IARU member society abbreviation. IARU International Secretariat club station NU1AW counts as a HQ station. Members of the IARU Administrative Council and the three IARU regional Executive committees send ?AC,? ?R1,??R2,? and ?R3? as appropriate.

5.2. All others send signal report and ITU zone.

5.3 A complete exchange must be logged for each valid QSO.

6. Valid Contact:
6.1. The same station may be worked once per mode per band for QSO credit.
6.1.1. Mixed-mode entries may work a station once per mode per band.

6.2. A station may only be worked for credit in the portion of the band that is generally accepted for the mode used.
6.2.1. On any band, a station may be worked once on Phone (in the Phone segment) and once on CW (in the CW segment).
6.2.2. Cross mode, cross band and repeater contacts are not valid QSOs.

6.3 Where contest-preferred segments are incorporated into regional band plans, participants must observe them.

6.4 The use of non-amateur radio means of communications (e.g. telephone or the Internet) for the purpose of soliciting a contact (or contacts) during the contest period is inconsistent with the spirit and intent of these rules.

6.5 Use of self-spotting techniques on packet or other mediums are inconsistent with the spirit and intent of these rules.

7. QSO Points:
7.1. Contacts within your own ITU zone, as well as QSOs with any IARU-member society HQ station or IARU official (counting as the special multiplier), count one point each.
7.1.1. Contacts with a station in the same ITU zone but on a different continent count one point.

7.2. Contacts within your continent (but different ITU zone) count three points.

7.3. Contacts with a different continent and IARU zone count five points.

8. Multipliers: The total number of ITU zones plus IARU member society HQ stations worked on each band (not mode.) IARU officials represent a maximum of four multipliers per band (AC, R1, R2 and R3)
8.1. IARU member society HQ stations and officials do not count for zone multipliers.

8.2. To qualify as the special multiplier, Administrative Council and Regional Executive Committee stations must only be operated by the individual station licensee as single operator entry.

9. Scoring: The total number of QSO points times the total number of multipliers worked.

10. Reporting:
10.1. Entries must be postmarked or emailed no later than 30 days after the end of the contest (August 14, 2007). No late entries can be accepted. Entries that are received after mid-October, 2007, even if mailed in time, may not be received in time to be included in the official results.

10.2. Electronic entries must conform to the Cabrillo file format.
10.2.1. The Cabrillo file format and specifications may be found at http://www.kkn.net/~trey/cabrillo/ or in the November 1999 issue of QST magazine.
10.2.2. Any entry which has been generated using a computer (either during the contest or after the contest) must be submitted either as an attachment to an email or on a 3.5? diskette.
10.2.3. Electronic files must use the entrant?s callsign as the file name.
10.2.4. The log file must be a chronological list of

QSOs as made not separated by band or mode.
10.2.5. Entries sent as attachments to email must be sent to IARUHF@...
10.2.5.1. Email entries must include the callsign used during the contest on the SUBJECT line of the email.
10.2.6. Entries sent on diskette should be mailed to: IARU HF Championship, IARU International Secretariat, Box 310905, Newington, CT 06111-0905 USA.
10.2.6.1. Diskettes must be clearly labeled with the station call sign, contest name, entry class and date.

10.3. Participants may submit their entry using the web applet found at www.b4h.net/cabforms

10.4. Paper logs must be in chronological order, not separated by bands, and clearly indicate for each contact: band, mode, date, time (in UTC) callsigns, complete exchanges sent and received, multipliers and QSO points.
10.4.1. Multipliers should be marked in the paper log only the first time they are worked on each band.
10.4.2. Paper logs with more than 500 QSO?s must include dupe sheets (an alpha-numeric list of all callsigns worked, broken down by band and mode.)
10.4.3. All contacts in paper logs must be in chronological order, not separated by bands.
10.4.4. Paper logs must be mailed to IARU International Secretariat, Box 310905, Newington, CT 06111-0905 USA and postmarked no later than August 9, 2007.

10.5. All paper entries must include an official summary sheet or reasonable facsimile thereof with complete contest information.

11. Awards:
11.1. A certificate will be awarded to the high scoring entry in each category in each ITU zone , each DXCC country and each ARRL Section.

11.2. A certificate will be awarded to the high scoring IARU member society HQ station.

11.3. Achievement level awards will be issued to those making at least 250 QSOs or having a multiplier total of 75 or more.

11.4 Additional awards may be made at the discretion of each country?s IARU member society.

12. Conditions of Entry: Each entrant agrees to be bound by the provisions of this announcement, by the regulations of his/her licensing authority, and by the decisions of the ARRL Awards Committee, acting for the IARU International Secretariat.

13. Disqualification: Any entry may be disqualified if the overall score is reduced by more than 2%.
13.1. For paper log entries:
13.1.1. Score reductions do not include correction of arithmetic errors;
13.1.2. Any entry may be disqualified if more than 2% of duplicate QSOs are left in the log and claimed for credit; and
13.1.3. A three-QSO reduction will be assessed for each duplicate QSO found during log checking or for miscopied callsigns.

For electronic logs, a one-QSO penalty will be assessed for a miscopied callsign.

14. Additional Rules. For situations not covered in these rules refer to the ARRL General Rules for All Contests and the ARRL Rules for Contests on Bands below 30 MHz..

15. For contest information, contact contests@...
or IARU HF Contest Information, PO Box 310905,
Newington, CT 06111-0905 USA.
15.1. Contest forms may be downloaded at:
http://www.iaru.org/contest.html

Dear All

From last few days, I am receiving some mails
automatically from my own email ID vu2jpn@...
which has not been sent by me.

This has happened when I did open one of the emails
sent by a ham which contained an adverisement of a
medical product.

Hence I request all, not to open my emails with
spurious subjects such as medical advertisements etc.

Best Regards

3109. Special Postal Cover & Cancellation for 50th JOTA - Radio Scouting Event

Yahoo group: m_a_r_s
Date: 2007-10-14 17:41:03 UTC
From: Ajoy
Topic: 3109 Message: 3109

SPECIAL POSTAL COVER AND CANCELLATION
FOR 50th JOTA - THE RADIO SCOUTING EVENT
BY VU2ARC and VU2LCI

Bangalore Amateur Radio Club VU2ARC along with Lions Clubs International Amateur (Ham) Radio Club VU2LCI have got approved from Indian Postal Authorities ☐ Karnataka Postal Circle for Special Postal Cover which is multicolored denoting the Scout Centenary 2007 and World Scout Jamboree on the Air 50th Anniversary JOTA 2007 by Bharat Scouts & Guides, Karnataka INDIA de VU2LCI with VU2ARC. The Special Postal Cancellation depicts of Radio Scouting Logo giving callsigns of VU2ARC and VU2LCI.

Those who are interested in buying this Special Postal Cover affixed with Rs. 5/- stamp (Rose Fragrance Stamp) can do so at General Post Office, GPO, Bangalore on payment of Rs. 10/- (MRP fixed by Postal Department) and those who are interested for bulk purchase of above 25 covers may send Bank Demand Draft to "Lions International Stamp Club ☐ India Chapter" along with postage charges to VU2LCI.

Cheapest would be buying a Megadoot post card which costs 25 paisa and getting it affixed with Radio Scouting Special Postal Cancellation which is free of cost across the Philatelic Counter at GPO Bangalore on 20th October 2007. Of if you are posting any letters with appropriate valued stamps affixed you can do that in Philatelic Section of GPO Bangalore which will get Special Postal Cancellation which also is free of cost.

THIS IS THE FIRST POSTAL SPECIAL COVER AND SPECIAL POSTAL CANCELLATION WITH CALLSIGNS ON THEM FROM INDIA.

Anticipate that those Amateur Radio Societies and Clubs take this up and make use of this unique opportunity.

Dear Huzefa.

Thank you for this email.

Lets enjoy this hobby of Ham Radio at its first place always. 73's de vu2jpn.

Huzefa Merchant VU2HIT <vu2hit@...> wrote:
extract from a link http://www.eham.net/articles/17503 CW and the State of Our 'Hobby'Daniel R. Quintiliani (K3DRQ) on November 6, 2007
I was recently thinking again about the repeal of the CW requirement and came to realize something important. Thanks to the efforts of the ARRL (not renewing my membership this year) and our government, ham radio is increasingly being marketed as a utility and public service and not a hobby. While it's always a good thing to help out in an emergency, we are forgetting the fact that ham radio is primarily a hobby. Emergencies are best left to the police, fire, and ambulance crowd. Besides, that is one of the core reasons we pay our taxes. We are now tying radio with the Internet via Winlink and the HSMM/Hinternet proposals. We also have Echolink, which has nothing to do with ham radio, but is rather a combination of a glorified instant messaging "boy's club" limited to ham operators. We are forgetting the fact that ham radio is primarily a hobby. At least, that's why I got into the hobby ten years ago. The new Techs coming in are treating it as a utility and cellular phone system, not realizing the fun of propagation and working distant stations.
This is why bands such as 15 and 10 meters are pretty much dead. Pretty soon, we'll lose more frequencies to business interests and be down to one or two "citizen's bands."
If we are serious about continuing the hobby during the next century and beyond, we need to market it as the "fun" that it is. This includes the fun of working 10 meter SSB in low sunspot years during Sporadic E skip days, the "retro" and historic nature of CW, and the QRP movement. Otherwise, why not just use the Internet or a cell phone? Repealing the CW requirement is a prime example of this trend. Whether it is "necessary" or not (it is still technically the second most efficient mode next to PSK31 and doesn't require a computer), it is still a highly important aspect of the hobby. 5 WPM isn't that difficult, and shouldn't scare people away from the hobby. -- At least from my perspective (I started out as a 5 WPM Tech Plus in 1997 and upgraded to a 13 WPM General two years later). Let's remember that ham radio is primarily a hobby, and should stay that way if it is going to last in the future. (Note: Before you accuse me of being too old and too nostalgic, know that I just turned 23 two months ago.) 73, Dan K3DRQ

It is an honour for Mumbai Amateur Radio Society to have a member who is diversified into various fields... cookery, farming, bakery and last not the least Ham Radio.

A member who has been honoured and felicitated by the Governor of Maharashtra for preserving the rich heritage of Mumbai.

I on behalf of the society congratulate our Founder Member No. 1 Mr. Zyros Zend VU2ZRS and his family on this grand occasion for receiving the Urban Heritage & Citizens Award.

3119. Kids Day Check-in

Yahoo group: m_a_r_s
Date: 2007-12-15 06:11:44 UTC
From: Jaiprakash Pullakudy
Topic: 3119 Message: 3119

Dear Friends pls.get ready for kids day.

Let our harmonics and their friends enjoy our hobby and pull them out from internet chatting.

Kids Day is an on-air event Sunday Jan 6, 2008.

http://www.arrl.org/FandES/ead/kd-rules.html

To encourage young people (licensed or not) to have fun with Amateur Radio. It is designed to give on-the-air experience to youngsters and hopefully foster interest in getting a license of their own. It is also intended to give older hams a chance to share their station and love for Amateur Radio with their children.

QSO: Name, age, location and favorite color.

Frequencies: 28.350 to 28400 MHz, 24.960 to 24.980 MHz, 21360 to 21400 MHz, 18140 to 18145 MHz, 14.270 to 14.300 MHz, 7.270 to 7.290 MHz, 3.740 to 3.940 MHz, as well as your favorite 2-meter repeater (with permission of the repeater?s sponsor).

Reporting: Logs and comments may be posted on the Internet.

Awards: All participants are eligible to receive a colorful certificate. You can download this certificate for free, customized with the youngster?s names, after filling out the Kids Day Survey.

dear vu2 bdl, vu2 sfh

i should thank you (vu2 bdl) also for being there for vu2 nfs who is a very old founder ham radio member. i am sure you would have gained alot of experience from her .

yourself and all are welcome . i am sure vu2 axn vu2 ivo and vu2 ktw have taken troble to organise this event to the best possible way .

and not to forget to thank vu2cbu Prasant kholi whoese vhf handy was used as the fox . thank you prasant very much , also a founder member .

thank you

Dear Fox Hunters & Organisers

Very Good Morning. Good Afternoon .....!

First of all let me thank VU2ZRS, VU2AXN, VU2IVO and all others who organised this Fox Hunt successfully.

After a long gap I attended the Fox Hunt. It was very exiting & enjoyable to hunt 4 fox's with expert hunters and SWL's.

I appreciate the snacks, lunch & dinner provided by organisers as well as I should thank for all the additional VHF sets bases/handies arranged - Thanks to all who provided vehicles for the event.

Hunting DON Fox was excellent - Don ko pakadna mushkil hi nahi namumkin hai - that went wrong Zyros. Many caught DON Fox. Location when caught the DON Fox looked like a DX Land itself - Would like to have snap of this location with DON Fox Around.

Hatz off to Zyros, Ankur, Ivor and all others out there.

I very much loved the event and would like to c more events coming up.

Shailesh

I have already couriered the all the renewals letter on Monday to Delhi, it will not be possible to do it form here now as , getting a draft from SBI takes hell lot of a time, so i request you to kinldy do the same form your side, also the Renewal letter required the signature of the applicant which was not on your renewal letter ,so evenn i had got the draft it would had not been possible to sent then too.

Dear Friends

This is to inform all that BMC conducted a surprise Disaster Excercise on Tuesday 13th May 08 at the vital 3 locations in Mumbai. All DMP team viz Govt.Organisation and NGO Teams were called by BMC.

As regards Ham Radio Support to BMC, I was happy to see VU2SVS and his team VU3RLP & VU2KGN had kept their presence at the locations. I had expected a very big team at different locations but couldn't satisfy the real ham support. Even though the turn out of hams were low I appreciate VU2SVS did it to the satisfaction.

I was with Civil Defence at SubControl alongwith VHF setup and could co-ordinate with these team, thanks to them. The frequency we operated was on 145.900. I also thank VU2AXN, VU2LNZ, VU2NYT, VU2HIT & VU2UBP for their call as standy support.

3176. Kids Day QSO

Yahoo group: m_a_r_s
Date: 2008-06-16 07:19:47 UTC
From: Jaiprakash Pullakudy
Topic: 3176 Message: 3176

Dear Friends

Let us have the following excercise on Air

----------Quote----------
KIDS DAY ON THE AIR

Kids Day is an on-air event to encourage young people (licensed or not) to have fun with Amateur Radio. It is designed to give on-the-air experience to youngsters.

Dates:Saturday, June 21, 2008, 1800z – 2400z. Operate as much or as little as you like.

Suggested exchange: Name, age, location and favorite color. Be sure to work the same station again if an operator has changed. To draw attention, call “CQ Kids Day.”

Suggested Frequencies: 28.350 to 28400 MHz, 24.960 to 24.980 MHz, 21.360 to 21.400 MHz, 18.140 to 18.145 MHz, 14.270 to 14.300 MHz, 7.270 to 7.290 MHz, 3.740 to 3.940 MHz, as well as your favorite 2-meter repeater (with permission of the repeater’s sponsor).

Reporting: Logs and comments may be posted on the Internet. Those without Internet access may forward comments to the Boring Amateur Radio Club (see address below).

Awards: All participants are eligible to receive a colorful certificate. You can download this certificate for free, customized with the youngster’s names, after filling out the Kids Day Survey. Alternatively, you can send a 9” x 12” SASE to Boring Amateur Radio Club, PO Box 1357, Boring, OR 97009. You can also join an email reflector for Kids Day. More info can be found at: http://lists.contesting.com/mailman/listinfo/kids

Dear Surendra,

Last time i miss field trip ans seems the dates are again clashing. Is it possible to postponed this field trip next month so i can come?This is a suggestion.

Dear Friends,
Summers are Over. Radios are in cold. Lets go and make the radios hot.
Planning to do a Field Trip on 26th and 27th July 2008 (Weekend) at Lonavla. The place is owned by Yogesh Gulati (waiting for the call sign) near Lonavla (2.5 kms from Lonavla Station. The place can accomadate max. upto 20 people. We will be reaching the destination by DECCAN EXPRESS (Dept 07:10) or INTERCITY EXP (Dept 06:45), both leaving from CST.

Please confirm your participation by calling me on 98206-60662 or LNZ (Girish) on 98207-58053 latest by 10th JULY 2008.

One and all hams are welcome. Come Together and enjoy the hobby and life.
Thanks.
Happy Hamming

dear surendra and girish

there is a very big TENT lying with MARS . arun singh used it it last . its in good condition .
Why dont we use it on this field trip to trip to lonavla . it would be exciting .
AROUND 6 PEOPLE CAN FIT IN THE TENT .
just a suggestion .

Hello All,

For your information I am collecting the renewal forms and fees for renewal of the amateur radio licence as per VU2HIT instruction.

Following are details,

Grade One = Rs. 100.00/- Fee for 5 Years (Rs. 50.00/- for postal charges) Total = Rs. 150.00/-
Grade Two = Rs. 60.00/- Fees for 5 Years (Rs. 40.00/- For postal changes) Total = Rs. 100.00/-

Please feel free to communicate for renewal of the amateur radio licence.

Mobile Number: 9920575650 (Shailesh Deshmukh - VU2LOC)

For reference the renewal form and checklist is attached.

3200. Meetings

Yahoo group: m_a_r_s
Date: 2008-09-28 09:50:01 UTC
From: Dinesh Patel
Topic: 3200 Message: 3200

Hello Mars Members

I appreciate the idea to meet regularly.

Can we think of meeting on friday evening or saturday evening?

This will help conduct meeting according to schedule as members shall be interested in reaching home as early as possible. Such meeting can be held at any convenient place in south mumbai.(No need to come for meeting on sunday)

Alternatively

Can we meet on sunday morning at places like national park, Ambedkar garden at powai opp. to L & T ,Hanging garden etc such places are many we shall be exploring mumbai alongwith exploring radio.

I will be happy if we can take up small technical topic for discussion at each meeting.

Above is only my view point/suggestion. lets think on it collectively.

3201. Ham radio ==>Brain food !!!

Yahoo group: m_a_r_s
Date: 2008-10-05 16:55:17 UTC
From: Dinesh Patel
Topic: 3201 Message: 3201

Hello Mars Members

Below is an article from eham.net

Is Ham Radio Good Brain Food?
Dennis Kippa (KW5G) on September 30, 2008 View comments about this article!
While recuperating from eye surgery recently I had some time on my hands and spent a good amount of operating time on CW and SSB on 40 and 80 meters. I am a "BOOMER" born in 1947 and became a Ham 46 years so I am no Spring Chicken.
I had not been on CW for some time so to say I was rusty is a understatement, but after a few days of practice it all started to come back to me and that 20 word per minute QSO was again the norm and it seemed to get easier with more practice. No great discovery there, it is just common sense, the more you practice the better you get. But something else happened and I can't say for sure but I have a theory. Maybe it is wishful thinking but I really think my general brain functions, you know, memory quickness, ability to concentrate, has improved by some small measure. I can't prove my theory at this point, I don't know how to do that scientifically but common sense says practice makes you perform a task better and faster.
My question to you is this: As many of us know as our age increases the chance of Alzheimer's and other brain conditions increases. Some of the QSOs I had were with Hams in their 70's and 80's and their ability to copy and send CW made me think they were much younger. After thinking about it, most of the really good CW ops I have ever known were old men. Their minds were like steel traps and very little got by them. They were sharp, smart and very active Hams. I know that there is a collation between being active and living a healthy life style but, do CW ops have a lower instance of Alzheimer's than the General public?
Can the brain be exercised by the act of sending and receiving CW to the point that Alzheimer's or any other brain deterioration is stopped or delayed?
I suppose a long term study of Hams in some kind of control group, some that use CW, some that do not may give us some scientific information. I will leave that to the PHD's and the MD's to figure out.
For me it is an interesting subject. Maybe some day the Doctor's will recommended a hour of CW a day to keep the old gray matter from rotting away!
I'm just thinking out loud here so now it's your turn. What do you think?
...-.-

Sub: AGM

Dear Huzefa

I regret i wont be coming for this meeting as protest ,for the reason mentioned below

1) During last AGM it was decided to call for an EGM to take vote on explusion of VU2NLF, the case which is pendig since now 2 years it was also taken up during AGM of year 2007.

2) There is no minutes of meeting Book being maintained , if yes can it be displayed during the AGM this year.

3) since during last year AGM through votes the account was cleared , this does not automatically absolves people involved in misusing the funds.

please see that during this AGM itself the case of VU2NLF explusion is brought to its logical end.

If there is any hope of these point being taken up then only it makes sense to attend AGM , otherwise lets put an end to this farce of every year
and in any case people can enjoy their hobby without a club too.

Regards

VU2UGJ.

PS :You may can cancel my life membership if above are not taken up.

Dear MARS committee

in the mail sent in regards to the MARS 9th AGM, it clearly seems you have missed out on a Senior Citizen of our club who is 75 years of age and a LIFE MEMBER Mr Pervez. .P. Mahdroina.

He has no inter net facility , he has strongly supported monthly meeting which was adviced by vu2 lnz girish sukhla and suppoerted by many members in the month of september 2008. but nothing has been done about the monthly meeting .

He has also written hard copy letter which was handed over to a committie member in regards to holding MEMBERS monthly meeting But nothing has been done about the letter

Pervez.P.Mahdroina letter handed over to the committee member given in the month of septemebr 2008 reads as :-

Honorable Sir,
I am a life member of MARS as such i would like to
attend monthly meeting. Kindly put me on your mailing so that we can attend the
same and have eye ball contact

You’re faithfully

P.P.Mahdroina
We would love to have monthly meeting
P.S. i don’t have internet facility which may kindly be noted

Pervez. .P. Mahdroina
Jijibhoy Flat 206,
7, Gamadia Colony,
Tardeo & 400007
25.09.2008

"on request the same can be forwarded on individual mail". "being intimated individually"

I REQUEST the MARS committe to please do inform him by hard copy post or in person .

3233. Renwal of licences

Yahoo group: m_a_r_s
Date: 2009-08-30 17:25:29 UTC
From: Surendra Shete
Topic: 3163 Message: 3233

Hello All,

I am collecting the renewal forms and DD for renewal of the amateur radio license.If we all send it in a group, it will be good for all of us.

Please read the FAQ below for all your queries as regards to Licenses renewal

Please follow the below FAQ for your License renewal
*
*
FAQ
*
*
1. How do I renew my License ?
*
**Please submit Self declaration of No. of Contacts made during the last 5 Years for renewal in your request letter. (Minimum 40 contacts per year is mandatory) which can be downloaded from below and send it to WPC Delhi along with the Photocopy of License & demand draft of renewal fees, also Please write your complete recent address (Including Town,City,State and PIN) of correspondence on top of the letter for fast disposal of the cases.*
*
DOWNLOAD SELF DECLARATION FORMAT

http://mumbaihams.org/old/Form/RenewalLicences.doc
*

Please also enclose ONE self addressed, un-stamped envelop of 23cm x 15 cm size for the Renewal Amateur License, where it is required to be posted and/or enclose ONE self addressed, un-stamped envelop of 24cm x 11 cm size for all other kind of correspondence.
*2 .What are the renewal fee ?

** Fee for Issue/Renewal of License* *
*
Grade Fee for 5 Years Fee for 2 Years
*
*
Advance-Grade 125/- 50/-
*
*
Grade-I 100/- 40/-
*
*
Grade-II 60/- 25/-

*
*
Grade-II (Rest) 60/- 25/-
*
*
*3. My license expired 2 years back , is my License still valid ? , if yes, what is late fee i have to pay ?

**Yes License is valid, but it shall be renewed immediately , but in your renewal application you have to justify for late renewal, No Late fees will be charged till expiry date , thereafter Late fee will be charged @ Rs. 10/- for every 6 Months.

Alternately Licenses can be renewed 3 month prior to expiry date
*
*
*
*4. Do i have to send my original License during renewal ?

No , only send the photocopy of License and previous renewal slips(if any)*
*
*
*5. Where do i send my application for renewal ?
*

The Asstt. Wireless Advisor to the GOI, Ministry of Communications & IT

Department OF Telecommunications, WPC Wing, Amateur Cell,

6th Floor, Sanchar Bhawan, 20, Ashoka Road, New Delhi-110 001

Here i suggest instead of sending it to WPC direct please send it to my address below, so it can be send in a group

*
*

*
*
*
*
*
*

B-8, 16-A, New India Staff Quarters, Juhu Lane, Andheri(W),Mumbai, 400 058 Cell:- 98206 60662
*
6. Can i send Demand draft of any other bank ?

No, Only a Demand Draft of requisite amount as mentioned above, drawn from any branch of **State bank of India Only in favors of “Pay and Account Officer (HQ), Department of Telecommunication ” or " or **PAO(HQ), DOT "

payable at Service Branch, New Delhi (code-7687). [Pl. write your License No./Call-sign/Name, License no.) on overleaf of DD]
*
*
*
*7. Can i send my application by courier ?

No, Please send your application by Ordinary Post, Regd. Post or preferably by Speed post (it reaches faster as no private courier are allowed inside WPC)
*
*
*
*8. How much time does it takes for the renewal ?

Generally it takes about 30-45 days for renewal to happen, but due backlog of new licences and other WPC activities , renewal can be delayed for months, but if send in a group it can be followed up for all

If you have any queries please mail direct to me

Dear Friends

I am pleased to announce that Civil Defence Training will start from Monday 14/09/09. Kindly be present at the following venue sharp at 5.30PM.

Office of Civil Defence & Home Guards
Next to Bombay Hospital
Opp. Cross Maidan
Near Metro Cinema, Mumbai

Dress Code : Office Wear

Training Timing : 1800-2030 hours

Date : From 14/09/09 to 25/09/09

Note : Please bring 200pages note book & zerox copy of your ration card.
Participants should be from Mumbai Area only

This is Basic Training of Civil Defence where you will be taught the basics of:

1. First Aid
2. Fire Fighting
3. Types of Fires
3. Knowledge on Bombs
4. Knots
5. Warden Service
6. Control and Communication Service
7. Rescue etc

Training is Free of Cost.

All Hams & SWL's are welcome to attend. It is with great difficulty that such a training has been arranged specially for HAMs by Civil Defence. Please take this opportunity of getting trained as it is a "Call of the Day".

Hope to see you all for the training.

3240. Disaster comm in AP

Yahoo group: m_a_r_s
Date: 2009-10-09 16:52:58 UTC
From: Sandesh Kamat
Topic: 3240 Message: 3240

Hello
Thanks for ur mail. Iam sorry to inform u that only ONE HAM VU2JPN & 3 SWLS including u have volunteered
to help in case of actual disaster. Its very sad that when only a meeting is called about 25 people come to do just time pass
but when ur required to deliver no one is not even bothered to inquire about the situation .
People are more than interested to do timepass during ganesh visarjan when all modes of communication is functioning
at its best . I fail to understand as to why people are so much interested in this event.
Let me share again with you that when it comes to communicate in case of disaster u require some kind of commitment
which i think is missing . In 2001 during Gujarat Earthquake 9 hams got together in just 5 hrs . I came to know about
the situation at 1pm at kemps corner & i managed everything & was back to mumbai central at 4 pm with all gear ready
now thats whats called commitment .
I thought there is no point in going to AP & not delivering what is required, with just 2 hams & 3 swls.

So guys have some kind of interest & practise actual AMATEUR RADIO & not merring around.

Regarding monthly meetings again its the same thing members are not attending the meetings as
you are aware JATIN during the 1st meeting called only 3 members were present . so do you all
members really think we should have a meeting ???? what for ??

Any good suggestions are wellcome if at all any one feels to give

Could this be true? We read about letters delivered several years late by post office but if this is true waiting 13 years to get a licence from WPC is probably a record in this Internet age.

Quote:
RADIO DEDICATION: VU2DWA- 13 YEARS FROM EXAM TO LICENSE

And here's the story an amateur radio applicant in India has received his license. What makes this interesting is that it only took some 13 years to reach him, Heres the story as we know it.

Back in 1996 Digvijayam Paricharla passed that nations amateur service exam. It normally would have taken a few months for him to have received his license and permit to operate, but months pass and then years but still no license.

After waiting and waiting, he finally contacted India's National Institute of Amateur Radio which in turn took up his cause. He says that through the dedication of VU2IPA, VU2RBI, VU2RDM, VU3ATK and several others, his dream of becoming a licensed radio amateur was realized, On October 28th he was finally issued the callsign VU2DWA and announced that he planned to celebrate by attending the now concluded Bangalor Hamfest.

VU2DWA sent out an e-mail telling the world that he is very grateful to everyone in the National Institute of Amateur Radio for their helping to champion his cause. And before you ask, nobody has said why it took all these years for his license to be issued. (VU Forum via W7VOA)

Hi

Going thru my belongings, I have come across the below mentioned items which I had forgotten existed with me.

All of them are brand new & in their original boxes.

I had purchased them for somebody as a personal favor but ended up with them because the concerned person refused to pick them up.

These items are compatible with Yaesu FT-411R. I do not even know if anybody is still using this handy.

Anyways, they are a waste lying with me.

1) Yaesu FNB-11H Ni-Cd Battery Pack
2) Yaesu FBA-17H Dry Cell case.
3) Yaesu CA-7 Charging Sleeves (For FNB-11H)

As mentioned earlier, all the above items are brand new & in their original boxes.

Incase anybody needs these items, let me know on raphelj@...

Regards

Raphel (VU2 UNO)

dear members

shall we have next meeting monthly or AGM at national park borivali.

We can meet on sunday morning. If possible we can ask authorities to have
fox hunt there.

We need to decide soon so that we organise before it rains.

Dear Members

Lets meet this 1st May.

Post your suggestions.

We shall meet in the morning at main gate near ticket counter.

Add your names and contact nos to this mail.

We need at least one member to take lead to discuss in detail any one technical point related to ham radio. The new batch of students are joining this event they shall benefit from this.

After meeting is over members may enjoy tiger & lion safari and other attractions of national park.

As there is no eating place inside we need to organise ourselves.

Thanks Satvinder if meeting materialises please help.

Dear member lets decide any suitable sunday and enjoy nature and radio. Early morning(say 8 or 8.30am) shall be better. We can meet,talk,discuss and leave before it is hot afternoon.

I wish if we can take up a single or two technical topic to be discussed. If any expert is ready we can learn at place like shantiniketan.

Interested members may reply.

Thanks and Regards

Dear Mars friends

As the elmers are on holidays due to two days weekend we are not meeting this saturday.

This does not mean that the meet is cancelled.

Rescheduled date shall be informed when date and place is fixed.

I would like to know is this national park location very odd for central suburbs?
We can also meet at Ambedkar garden (opp to Larsen & toubro,at powai lake,near chinmaya temple).

Keep posting your suggestions
(once Late Mr Pramod Navalkar of ShivSena was to deliver speech at some auditorium and he did it. The finest part is the audiance was two people only)

Dear Dineshbhai,

Please post regarding timing, agenda and participants numbers or name on a group for the meeting of 1st May,2010. so as it becomes easy for members to plan their schedules to attend the same or to plan other personal events.

Pl update about the final schedule a.s.a.p

Thanks & Regards,

Dear Members

The antenna home brewing is on of the important topic. Rather it is set of topics.

Jayeshbhai - IVV to decide if he wishes to and he can contribute.

We have many topics for discussion and learning.

We need to see availability of expert so that we get detailed information.

we should organise lectures at rotating places at convinient locations.

Great Idea Dineshbhai count on me as a participent, my sugetion is Jayeshbhai should take a lead and have a discution on homebrewed antenas as he has been developing many Home brewed antenas and the cost is very cheap also the results are very good.

Girish

Thanks for reply and interest

Special thanks to satvinder for national park inquiry and information.

3262. High Tide Days and Dates - Mumbai Monsoon 2010

Yahoo group: m_a_r_s
Date: 2010-06-06 07:10:14 UTC
From: Surendra Shete
Topic: 3262 Message: 3262
Attachments: 1 described; binary payloads are missing from this source WARC

*Dear All, *

Please find below the list of *26 High Tide dates* for the coming monsoon.

Floods in Mumbai are attributable to simultaneous occurrence of rainfall and high tides. If, the rainfall is in excess of 200 mm in a day (24 hrs), Floods can occur anytime irrespective of tides. However, if there is moderate rainfall but the tide is in excess of 4.50 meters at the same time, the city of Mumbai is sure to get flooded.

Dear Rufzebh, Jatin, Ankur and All Other.

Great to see the Crowd.

It is a history, when a person gets up to do something good or extraordinary people will follow you and there will be few who will be a critic. Crowd and Critics are necessary for the success because both make you more aggressive towards your achieving the goal.

Keep it up guys. The big list that I see joining you is a great example to your success. Always remember the 80/20 rule. For your success you have to have 80% supporters & 20% critics. Now you have it.

When you decide what you are doing is correct JUST DO IT. One Man Army does wonders.

I again repeat Keep Going. Be the Best in operations, techniques, software, hardware planning - When there is Intension + Effort; Grace will follow for the Success. Skill, Attitude & Knowledge is very necessary.

Good Luck guys

Dear Friends

Since on Sunday's we do not have VHF net at Mumbai, I will be conducting Special Night Owls net.

Hence I requet all hams to check-in to Night Owl's Net on Sunday 25th July, 2010 at 2130 hours.

Nothing specific on this day. But only to inform you all that myself being cadet of Civil Defence we have a team of Civil Defence volunteer known "Search And Rescue Team" (SAR Team) at all Mumbai BMC Wards. They are on 24hrs duty, divided into 3shifts, throughout this monsoon season. And every officers have to take charge for one day to be on Night Shift at City Control Room. Hence my turn of night duty is on 25th July from 9PM to 7AM next morning.   So I took this opportunity to conduct Ham Radio Net from the Control Room.

Hope you all will check-in to this Special Night Owl's net on Sunday 25 July 2010 at 09:30PM.

Dear Friends

Thank you very much for checking into the special Night Owl's net conducted by myself alongwith VU2LNZ Girish on 25 Jul 10 from Civil Defence City Control Room.

The following hams checked into the net:

1.	VU2PDN	SHREENI
2.	VU2PJM	PARVIZ
3.	VU2IVV	JAYESH
4.	VU2WLL	WISPI
5.	VU2LK	BOB
6.	VU2AY	SIRIL
7.	VU2HOT	JAGDISH
8.	VU2WSM	SATISH
9.	VU2TOO	ROHIT
10.	VU2UBQ	JAYANT
11.	VU2LKI	JAYAPRAKASH
12.	VU2TCA	SURESH
13.	VU2TBV	PRAHALAD
14.	VU2TCE	SASHI
15.	VU2NAK	ASHIM
16.	VU2TBT	NISHA
17.	VU2ZRS	ZYROS
18.	VU2LLM	ANDREWS
19.	VU2CMI	SUHAS
20.	VU2SGW	SAI
21.	VU2NYS	SHOBA
22.	VU2NYT	NITIN
23.	VU2JPN	JAIPRAKASH
24.	VU2LNZ	GIRISH

Thank you very body once again for taking time to check-in.

Do keep this beautiful hobby alive by checking into NET's regularly on VHF and HF also have regular QSO's.

During the net I have introduced you all to RELAY NET too. This will be very interesting to all as every ham will get a chance daily to be a Net Controller. Details I will email by a separte mail shortly. Since sunday's we do not have Night Owl's net, we can join togther at the same time and can conduct NIGHT OWL's RELY NET from Sunday 1st August 2010. Initially we will conduct this net through Mumbai and Matheran Repeater and then can try simplex too. I am sure this will be interesting.

Interesting point about the relay net. Given the enthusiasm for EmComm it would be a good idea to train all the "disaster" enthusiasts in traffic handling. I must be honest, I have my doubts about the traffic handling skills of some of the newcomers. If this is the only thing the majority wants to do, then they better be good at it.

What we need are ops skilled at handling a flurry of messages without losing information. Rapid fire msgs in quick succession with no repeats. As old timers would put it, "100% solid copy and dit perfect sending".

It would be wise to emulate the NTS model and train the newcomers in QSPing messages without depending on the rptr and keeping power levels to the minimum.

http://en.wikipedia.org/wiki/National_Traffic_System

http://www.arrl.org/chapter-two-principles-of-nts-operation

http://www.dfwtrafficnet.org/NTS_Training_Manual.html

http://www.textfiles.com/hamradio/whatisnts.ham

Putting away the microphone and trying out other modes would greatly help knowledge levels too.

73,
Deepak

73= Best regards

3280. RELAY NET

Yahoo group: m_a_r_s
Date: 2010-07-29 09:01:44 UTC
From: Jaiprakash Pullakudy
Topic: 3280 Message: 3280

Dear Friends

Please treat below email as a part of Hobby and not related to any emergency programme.

As there is no Night Owl's net on Sundays, I will request all Hams to continue Night Owl's net on Sunday's too with a difference using RELAY method.

 “RELAY NET”

I have got this once I was at my native, and participated there through Repeater.

Relay Net is the net, mainly to increase the capability of Net (Trafic) Control skill among Hams

 As the name says, the net controller will change till the end of the net. (As relay race in athletics)

One net controller will start the net, by announcing the name of the net, frequency, timing etc.

On the general call, the FIRST station will check-in and pass his traffics if any, then the net controller pass the mic to FIRST station to make the call and FIRST STATION, will take the charge of net control. Then the SECOND STATION will check-in, pass the traffic, then SECOND station will be the net Controller and so on..

In between any station is not able to do or not interested to take the controlling charge, the PREVIOUS STATION CAN CONTINUE (say the second station not interested, then the fist station can continue) or the main net controller can continue.

The main NET CONTROLLER CAN KEEP THE FULL LOG, and finally Pass/ take the mic from the last controller and conclude the net by announcing the total check-ins, times of the next scheduled nets etc and declaring the freq., for general traffic.

Let us start something new from this Sunday 01 Aug 10.

I request all hams, in and around Mumbai, to be on Air every sunday on Night Owl's net timing. Please use your MIC and be on air.

Keep our Hobby Alive. Any other ideas also most welcome.

73z de vu2jpn

3281. RELAY NET

Topic: 3280 Message: 3281

NIGHT OWLS RELAY NET TO START FROM TODAY 31-07-2010 instead of 1st Aug 10.

All hams are requested to join and control the net. OM Wispi VU2WLL will start this net and we all will continue and the net will be closed by VU2WLL.

Let us enjoy our hobby and be on air today from 2130 hours on VHF Mumbai and Matheran Repeater for Night Owls Relay Net.

 As the name says, the net controller will change till the end of the net. (As relay race in athletics)

One net controller will start the net, by announcing the name of the net, frequency, timing etc.

On the general call, the FIRST station will check-in and pass his traffics if any, then the net controller pass the mic to FIRST station to make the call and FIRST STATION, will take the charge of net control. Then the SECOND STATION will check-in, pass the traffic, then SECOND station will be the net Controller and so on..

In between any station is not able to do or not interested to take the controlling charge, the PREVIOUS STATION CAN CONTINUE (say the second station not interested, then the fist station can continue) or the main net controller can continue.

The main NET CONTROLLER CAN KEEP THE FULL LOG, and finally Pass/ take the mic from the last controller and conclude the net by announcing the total check-ins, times of the next

scheduled nets etc and declaring the freq., for general traffic.

Let us start something new from this Sunday 01 Aug 10.

I request all hams, in and around Mumbai, to be on Air every sunday on Night Owl's net timing. Please use your MIC and be on air.

Keep our Hobby Alive. Any other ideas also most welcome.

Dear Friends,

As a part of Wildlife Week and Global Day for Protection of Animals - it is proposed to put up Amateur (Ham) Radio Special Event Station from 1st to 10th Oct 2010 as World Flora and Fauna event in Daroji Bear Sanctuary in Kamalapur-Hampi on the banks of Tungabhadra River in North Karnataka State.

VU2LCI - Lions Clubs International Amateur (Ham) Radio Club station invites serious operators to volunteer with their equipment to participate in this unique activity. We did similar activity at Bannerghatta National Park in 2008 with callsign AT8WFF details are on http://www.qrz.com/db/AT8WFF

Those who are interested have to send copy of their amateur radio licence and renewal slip, Covering letter addressed to Asst Wireless Advisor to GOI. WPC expressing their willingness to participate, two passport sized photographs along with Advance fee for change of QTH of Rs. 250/- to be paid in cash/cheque payable at Bangalore where a consolidated demand draft will be bought by VU2LCI and sent together by 15th Sep 2010. We anticipate the Permission from Karnataka State Forest Department and WPC at the earliest. The individual expenses as accomodation, travel, food has to be borne by individual participant and this is not a conducted tour or organised Field Day as very limited resources is available at these Sanctuaries.

More details please contact VU2UR - Manohar Arasu who is our VUFF Co-Ordinator representing India.

Please look into our previous such special event station activity
http://www.qrz.com/db/VU0LH at Surathkal Lighthouse in ILLW 2010 INDIA event.

Free Morse Code Flash Cards to download
A set of printable cards to help those interested in learning Morse Code for Amateur 'Ham' Radio or other uses is available from my website. Full resolution PDFs can be downloaded from:

Fronts: www.g0tdj.com/docs/g0tdj_morse_cards_fronts.pdf
Backs: www.g0tdj.com/docs/g0tdj_morse_cards_backs.pdf

Print on A4 stout card. Print all fronts first, then reverse the card, re-feed into your printer and print the backs. To trim, use a cutting mat and knife along with a metal rule for safety. Stay within the card and cut across from trim mark to trim mark.Regards

3297. GPS Navigator - Road Pilot from MapMyIndia.com

Yahoo group: m_a_r_s
Date: 2010-11-30 11:57:48 UTC
From: Ajoy
Topic: 3297 Message: 3297

Dear Friends,

I have been into trekking, mountaineering and skiing from my childhood days and it was my fantasy to buy GPS and since then I was using handheld one which was then US 100 $ and its LCD display is now faded - still working - once came into Amateur Radio and started participating in car rallies have been using this GPS.

After seeing the state of art GPS Navigator gadget which VU2FI had bought from MapMyIndia which is a stand alone instrument which uses cigerate lighter adapter to charge and work has almost all the highways, roads and city maps loaded with colour display giving voice direction in local languages and DX languages really amazed me and started bargaining with local vendors (15 of them in Bangalore alone) and finally talked with the main office in Noida asked for bulk purchase discount and ordered 10 units of the lowest priced model Road Pilot and now being Owned, Tested and Used by VU2LU, VU2GGM, VU2GLS, VU3HDP, VU2GLS, VU3NEO, VU2ZUB, VU2TS and myself VU2JHM

The weblink of this company is http://www.mapmyindia.com

Now a days most of the expensive mobiles do have GPS which uses internet to show maps and does this navigation work - but how long can u keep your cellphone on your dashboard while travelling from one city to another or within without using the phone - so this stand alone seems to be a good one for trying out. The new expensive cars have this inbuilt into their dashboard along with their multimedia player.

We have talked and got the company reduce their prices of Road Pilot MRP Rs. 7990/- for even single unit at Rs. 7500/- without India Motoring Atlas worth Rs. 350/- or if you want this also the company is ready to give if for Rs. 7750/- with packing and courier charges where you get it directly at your door step.

There are other higher expensive models of bigger screen display, having multimedia SD card reader, Maps having door numbers with some cities (Bangalore it works fine), USB port where you can plug your Pendrive, ports for AV so you can plug in your car reverse cam (FREE OFFER) with similar Rs.250/- to Rs.300/- discount by contacting Mrs Sonam Rawat Cell # +919810788997 email: sonam@mapmyindia.com do tell her you are Amateur (Ham) Radio Operator.

I am sure all of you would get addicted with this new toy.

Well, it works in places where the road map is not yet made by giving the GPS readings longitude, latitude, altitude, time and speed, heading/direction with capability to position you with 12 satellites.
The battery after being charged seems to work quite well for two - three hours not sure how long it lasts - still have not tested this getting off the car. The motorbike version is quite expensive which is waterproofed - I do not recommend this as simple 3.5 inches one is quite well.

Hope the MapMyIndia people have enough ham radio customers and we go in for APRS activity and our Disaster Management applications soon.

Wonder if they give me some commission for all this writeup - Hi !!

Topic: 3301 Message: 3301

Dear Friends

On Sunday 19.12.10 Demo practise was conducted at Civil Defence Staff College Ground at 16:00hrs and the following RACES team members had participated:

1. VU2LNZ
2. VU2YKG
3. VU2NOW
4. VU2CMI
5. VU2HOT
6. VU2IVV
7. VU2JPN &
8. DHARAMJEET SWL

From the same location we conducted a VHF Net to check feasibility of VHF Reach through Mumbai Repeater and I thank all those who checked-in:

1. VU2JPN Jaiprakash Net Controller
2. VU2TBT Nisha, Panvel
3. VU2WSM SATISH, DOMBIVALI
4. VU2LLM ANDREWS, DOMBIVALI
5. VU3TMM AMIT, KALYAN
6. VU2TCE SHASHI, PANVEL
7. VU2BLT SATVINDER, DAHISAR
8. VU2CMI SUHAS DEMO LOCATION
9. VU2IVV JAYESH DEMO LOCATION
10. VU2TQC JAYANT CBD BELAPUR NAVI MUMBAI
11. VU2YKG YOGESH, DEMO LOCATION
12. VU2HOT JAGDISH, DEMO LOCTION
13. VU2NOW RAKESH, DEMO LOCATION
14. VU2PJM PARVIZ, TARDEO
15. VU2WLL VISPY, TARDEO

Thank you once again to all for the support given.

The final full fledge demo will be on 23.12.10 but no net will be conducted on this day. We the RACES team will be participating in the demo of Chemical leak & Bomb Blast scenario. These Excercise will be combined demo by Civil Defence, Home Guards and all other Emergency Service. The same will be witnessed by Director of CD - Home Guards and other Dignitaries.

I am pleased to welcome all Hams and friends to witness these Stimulation Excercise at the following venue:

Civil Defence Staff College
Office of the Civil Defence and Home Guards
Next to Bombay Hospital / Metro Cinema

Mumbai.
Time : 1530-1630hrs.
Date : 23.12.2010.

==========

The 64th Raising Day celebrations of Home Guards was held on 23rd December, 2010 at the Civil Defence Parade Grounds near Metro Cinema at Marine Lines, Mumbai.

The main function was an elegant march past of 6 platoons from Home Guards – male and female wings, Civil Defence cadres, Fire Service dept, marching to the tune of Mumbai Police and the Home Guard bands.

This was followed by a very impressive mock drill conducted by various Civil Defence volunteers and the Fire Dept. to demonstrate the response of the units during various emergencies.

I am very happy to inform you all that 8 HAMs and 2 SWLs, who are also CD volunteers took an active part in this demonstration and were at the forefront while providing communication during the simulated disasters.

Scenarios created during the exercise were – IED explosion, Industrial Chemical leakage and Fire in a Building.

The situation began with a depiction of people going about their daily routine in public places like markets, gardens, etc. which suddenly gets disrupted when IEDs go off at these places harming the general public. In another part, an industrial chemical leakage contaminates a wide area causing chaos, panic and affecting the people. Similarly, a fire engulfs a tower trapping people who start crying out for help.

A couple of HAMs in a vehicle passing by the area immediately go on air and report the incidents. HAMs who are tuned into the frequencies respond by converging immediately and report to the Incident Control Officer (ICO), who coordinates and directs the rescue efforts at the Civil Defence Command Centre, offering assistance in providing communication. On ICO’s acceptance myself VU2HOT and SWL Dharamjit Kalsa set up the HAM control station and send teams to different locations – VU2CMI & VU2LKI to the fire area, VU2LNZ to the contamination area which has been cordoned off and sealed, VUIVV and SWL (forgot name) to the CCP (Casualty Collection Point), VU2YKG and VUGMI in a vehicle are kept on standby. VU2JPN in his capacity as Deputy Divisional Warden of Civil Defence is seated amongst the dignitaries and with his broadside view guides all the HAMs in sending their reports.

A continuous stream of QSP flows in from all locations reporting requirements, casualties, etc. which is passed on to the ICO. CD had 2 handies - one which was operated at ICO location and 2nd by warden from the disaster location.

The drill passes off smoothly in about 20 min considering the practice and rehearsals put in by all the people involved over the past few days. Hope these efforts don’t get tested in real life, but I’m sure when disaster does strike all this hard work will translate into saving more lives.

Jai Hind

From: Dinesh Patel
Topic: 3305 Message: 3305

Dear Mars Friends

Something I wish to share

On 17th Dec I met VU2TQC Jayant Singh at Belapur.

He is known to all of us for his satellite work. i wanted an opportunity to see how he is working satellites.

I was amezed on seeing his antennas. He has made all the types of VHF and UHF antennas. Yagis,Quad etc. His first QSL card received from abroad is from Bangkok. The said QSL card is received for contact through satellite. He is operating fixed VHF /UHF antennas without any azimuth elevation rotators.

We need to learn from him as well as appreciate his efforts despite busy schedule. I see many foreign magazines wherein if anybody has homebrewed a simplest antenna the same is appreciated and described as special achivement.

Regards

Dinesh Patel VU2DCI

3310. FW: [Worldradio-l] WRO News: NASA Asks For Hams' Help, Plus Two Centennial Special Events

Yahoo group: m_a_r_s
Date: 2011-01-21 05:55:25 UTC
From: Dinesh Patel
Topic: 3310 Message: 3310

From the WorldRadio Online Newsroom...

NASA Seeking Hams' Help

NASA is asking hams around the world to listen for the beacon from the NanoSail-D nanosatellite, which was ejected yesterday from the larger FASTSAT (Fast Affordable Scientific and Technology Satellite). The beacon is in the 70-centimeter ham band at 437.270 MHz. The satellite is supposed to deploy a solar sail after three days in orbit. Hams who monitor the beacon are asked to send their reports to the NanoSail-D dashboard at: http://nanosaild.engr.scu.edu/dashboard.htm. More information on the satellite and the mission may be found at http://www.nasa.gov/centers/marshall/news/news/releases/2011/11-009.html .

Two Ham Radio Centennial Celebrations

Wish a Happy 100th to a Ham Radio Legend

Leo Meyerson, W0GFQ, a longtime leader in the ham radio industry as owner of World Radio Laboratories (think Globe Scout and other Globe radios from the "golden age" of ham radio), will turn 100 years old in February.

QCWA Chapter 154 is hosting a birthday party for Leo and running a special event station (W0G) on February 24. (Look for W0G on or near 14.260 MHz between 1800 and 2400 UTC. QSL via the operator you contact.) Leo is planning to be listening in, and may even make some contacts himself.

In addition, QCWA national president Bob Roske, N0UF, suggests that all hams who would like to join the celebration write "Happy 100th Birthday, Leo" on a QSL card and mail it to: Leo Meyerson, W0GFQ, 19 Park Lane, Rancho Mirage, CA 92270.

Ronald Reagan Centennial Special Events

Two amateur radio clubs in California are planning special event stations in honor of the 100th birthday of former President Ronald Reagan on February 6th.

The Ventura County Amateur Radio Society will operate N6R from Thousand Oaks, California, from 1600 UTC on Sunday, Feb. 6, through 0200 UTC Monday, Feb. 7, and intermittently at other times on Saturday (2/5) and Monday. Tentative frequencies (+/- QRM): CW: 3545, 7045, 14045, 21045, 28045 kHz; SSB: 3820, 7260, 14255, 21320, 28490 kHz, plus local repeaters and FM simplex. More details at < www.qrz.com/db/n6r>. E-mail scheduled requests fo <n6rn6r@...>. QSL with SASE (no eQSL or LoTW) to Peter Heins, N6ZE.

The Santa Barbara Amateur Radio Club will operate W6R at various times and from various locations on Friday, Feb. 4 through Monday, Feb. 7. Main operation will be on 2/5 from 0300-2100 UTC. In addition, a rover operation from the Reagan ranch is scheduled on Feb. 7. For updates and QSL information, see < www.sbarc.org/w6r.html>.

3342. ARRL Kids Day contact 18 June 11

Yahoo group: m_a_r_s
Date: 2011-06-13 07:39:24 UTC
From: Jaiprakash Pullakudy
Topic: 3342 Message: 3342

Dear
Friends

Let us
have some activity on VHF through Mumbai & Matheran Repeaters on Saturday 18
June 2011. KID'S
DAY

Let us all
join on VHF at 9PM IST on 18/06/11 and enjoy kids day having chat with other kids
and hams, also let them check-into Night Owls Net and Sahyadri Net.

ARRL Kid's Day

Twice a
year, ARRL offers an event designed to promote Amateur Radio to our youth.
Share the excitement with your kids or grandkids, a Scout troop, a church or
the general public.

Purpose

Kids Day is an on-air event to encourage young people (licensed
or not) to have fun with Amateur Radio. It is designed to give on-the-air
experience to youngsters and hopefully foster interest in getting a license of
their own. It is also intended to give older hams a chance to share their
station and love for Amateur Radio with their children.

Dates and Times Saturday, June 18, 2011

Kids Day always runs from 1800 UTC through 2359 UTC.
Operate as much or as little as you like.

Suggested Exchange

Name, age, location and favorite color. Be sure to work the same
station again if an operator has changed. To draw attention, call "CQ Kids
Day."

Suggested Frequencies-

10 Meters: 28.350 to
28.400 MHz

12 Meters: 24.960 to 24.980
MHz

15 Meters: 21.360 to
21.400 MHz

17 Meters: 18.140 to 18.145 MHz

20 Meters: 14.270 to 14.300 MHz

40 Meters: 7.270 to
7.290 MHz

80 Meters: 3.740 to 3.940 MHz

You can also use your repeater (with permission)

Reporting

All participants are encouraged to post their story and photos
to the Kids Day Soapbox page. Tell
the world about your operations, the fun you had, and who you talked to!

Kids Day Survey and Certificates

All participants are eligible to receive a colorful certificate. You can download this certificate for free, customized with the
youngster’s names, after filling out the Kids Day Survey found on the same page
as the certificate generator. Alternatively, you can send a 9” x 12” SASE to

Kids Day Certificate Request

Dear VU2JPN and Friends,

We here at Bangalore would be for the first time in country taking part in 10th International Museum Weekend from 17th to 27th June 2011 and waiting for special callsign otherwise we would be operating VU2ARC

Do try to put up HF along with your VHF activites so if kids are on the air we can exchange greetings and have QSO.

Best of 73's

Dear Hams from Mumbai/Navi Mumbai/Thane,

See the mail posted in VUHam group. It looks interesting to me! Although we may not be able to use this callsign to operate on HF/VHF in India one can take US callsign here itself.

Would appreciate if organisers of the Hamfest consider this request. I am sure to give this exam if it's taken at the Kochi Hamfest.

I have spoken to Suresh-VU2IPL and he said that if there are enough candidates at Mumbai the exam can be conducted at Mumbai/Thane also.

Thanks n regards,
Prashant,VU2CBU

Dear Friends

I would like to know if there are any Amateur Radio Operators/Clubs at Ankleshwar area or in Bharuch District of Gujarat.
In case available please let me have complete contact details.
Thank you in advance.

Dear Friends
BMC has decided to train 50 of its staff to become an Amateur Radio Operator. Duration of the course will be 6 months @ 2hrs per week. Trainer will be a ham.Huge fees will be paid to the trainer.There will an interview of BMC Staff who opt's for the Amateur Radio training.If they all pass and get the licence, the radio equipment will be gifted to pass outs and will be operating during emergencies in respective BMC Wards.
I am not sure if government has decided to gift the amateur radio equipment to the pass out of the course.
BMC is unable to understand:
THE DIFFERENCE BETWEEN AN AMATEUR RADIO EQUIPMENT AND THEIR DEPARTMENT WIRELESS EQUIPMENT???????
Correct Answers by hams (may be) : It is not the equipment - It is the intelligence of the operator - Brain Capacity with hobby in heart and guts and vision to operate and help on humanitarian grounds.
Note : The earlier BMC guys who were trained few months back has vanished. Let us see about this 4 dozens + two.
WASTAGE OF PUBLIC MONEY. BMC Wants everything to be done on their own using their unused brain powers.
Same thing was done with Civil Defence. BMC instructed Civil Defence officials to train BMC Staff so that they are available during emergencies.
Sorry state of BMC Guys - in future they will be trained for flood rescue, fire fighting, rescue operations, Policing, Defence activities etc etc.
Anyways this is only to inform all of BMC new plans - Hobby to Profession.
73z de vu2jpn.
Anyways Head count of hams will increase. It is good news to all hams and net controllers.

Why do they need to use our ham band and also our ham radio name in order to do all this. Tomorrow if this turns out to be a scam to make money. Ham radio itself will earn a bad name.

Dear All
Attached is brochure of Civil Defence. Those who are interested to join are most welcome to call at contact numbers and be active at your own area of stay.
There are many different courses related to DMP which includes Control & Communication Course.
I have done around 8-10 courses and from 1st to 3rd Aug 2012, I will be attending an important course "Incident Command Officer".
Sorry for this invitation message though it not related to Amateur Radio, but any interested and willing hams are most welcome to Civil Defence.

Subject: USA Amateur Radio License Exams session on 16th Dec-2012

Dear all,
We are going to organize USA Amateur Radio License Exams session on 16th Dec-2012 in Radakrishnan salai,Chennai.
We
are trying to find a location nearer to the Hamfest India-2012 venue to
make it more convenient to the HFI delegates also.Exact location will
be updated and intimated to all the registrants soon.

All
the Three classes of licenses i.e Technician, General and Extra are
going to be served. Please avail this opportunity and spread this info
in local nets and other medias as well.

Exam date: 16-11-2012 Time: 05:15 Pm

Application process,photo Id verification, payment of fee $15 or Rs:850/- etc., all will be at the time of test session only.

Walk ins allowed,but please register to serve you better.

Results and CSCEs: same day evening.

New Systematic call signs expected: By Christmas or before new year day!

Confirmed VEs:AB2ST,WA1SM,KJ4VMC,AE5VK and AB9US.
Expecting consent from:Ac2DT,AB1QH,AK4EC and any other VEs wish to join please welcome.

Request to Non-VE helpers:Any individuals would like to give a helping hand please let us know.

More info : https://sites.google.com/site/ab9usvu2ipl/

3380. CQ Call to all Station at Mumbai Thane & Navi Mumbai

Yahoo group: m_a_r_s
Date: 2013-07-19 08:28:33 UTC
From: Jaiprakash Pullakudy
Topic: 3380 Message: 3380

Dear Hams

I am pleased to inform all that, special Civil Defence course for Amateur Radio Operators of Mumbai, Thane & Navi Mumbai will conducted shortly at Mumbai Staff College of Civil Defence near Metro Cinema, Marine Lines (E), Mumbai. Duration / Date & Time will be intimated soon.

Hence the interested Hams residing at Mumbai, Thane, Kalyan & Navi Mumbai can reply to me directly to vu2jpn@... by 21.07.13 as I have a meeting on 22nd July to finalise the course time and date. The proposed plans are after 15th August for 5-6 days or 10 days @ 1800hrs to 2030 hrs.

I will be conducting Special VHF net on 22nd July, 2013 at 2200 hrs (after night owl's net is over) through Mumbai & Matheran Repeater to activate interested candidate for on air contact.

Regard

vu2jpn

3382. Fw: Welcome you..New Volunteer Examiner!!

Yahoo group: m_a_r_s
Date: 2013-08-26 07:38:23 UTC
From: Basappa-Arabole
Topic: 3382 Message: 3382

Dears,
I give credit to my friends who always encouraged me for HAM radio. YOU ALL Encouraged me for more studies.
Once again tnx to all.
If anyone need any help on studies for USA HAM EXAM pse do email me.If you find any candidates interested in these exams let them follow this:
https://sites.google.com/site/ab9usvu2ipl

Subject: Welcome you..New Volunteer Examiner!!

Dear Basappa KC2ZNJ,
We ARRL/VEC VE team India, so pleased to congratulate you on this joyous occasion of your Volunteer Examiner credentials. We wish you many successful exam sessions serving Amateur Radio community...cheers!!!
Please join with us as a Volunteer examiner to the forthcoming exam session at Gwalior during HFI-2013 on 21-09-2013 at 1.30 PM.

73,
de Suresh- AB9US (VU2IPL). cell:+91 9390613599

Subject: [ARSICOM] JUNO SPACECRAFT TO FLY BY EARTH as scheduled

Here's some news you might not hear from NASA because, like
the rest of the US government, the space agency is closed.

NASA's Juno spacecraft will slingshot past
Earth using gravity assist (a must see
video) on October 9th for a velocity
boost en route to Jupiter.

At closest approach the spacecraft will be only 560 KM from
Earth (over Cape Town) as it gains an extra 16,000 mph for the
long journey ahead. (Arrive on Jupiter:
2016)

During the flyby, Juno's science instruments will sample the
Earth environment--a practice run for data-taking at Jupiter years
from now. Fortunately, commands to activate Juno's sensors
were uploaded before NASA's shutdown. The science experiment
can proceed as planned. Radio amateurs are encouraged to beam
a message to Juno during the flyby. Juno will be
listening.

Here is the frequency table. Please
do participate!

A 28.001
B 28.019
C 28.037
D 28.055
E
28.073
F 28.091
G 28.109
H 28.127
I 28.145
J 28.163
K
28.181
L 28.199
M 28.217

N 28.234
O 28.252
P 28.270
Q
28.288
R 28.306
S 28.324
T 28.342
U 28.360
V 28.378
W
28.396
X 28.414
Y 28.432
Z 28.45

The frequencies corresponding to the last
letter of your callsign. [like: VU2TS - on
28.324]

This pass is on an ascending
node and crosses VU2 from SW to NE between 19:30 and 19:50
UT.
However, since the transmission is on 10 meters, we can
transmit anytime between 18:00 UT
and 20:40 UT on the 9th October, during the flyby. Even
throughout this period.

The "HI" message will be transmitted in Morse code with a dit
(or key-down) time of 30 seconds.
Sending HI at 1/25th word per minute works out to six minutes
after which you can send your
callsign at normal speed.

Ensure that your system's clock is synchronized to the network
time.

If you participate and would like to receive a QSL
card for contacting Juno, please send an email
with your call sign and mailing address. Cards will be sent to
participants who email this information in
the months following the event. juno_outreach@...

The COUNTDOWN page is available at: http://www.jpl.nasa.gov/hijuno/

If there are any specific questions, I shall be
pleased to answer them!

Ganesh VU2TS
B.R.HILLSU

3388. The “DXPP”

Yahoo group: m_a_r_s
Date: 2013-11-24 10:51:26 UTC
From: VU2LOC
Topic: 3388 Message: 3388
Attachments: 1 described; binary payloads are missing from this source WARC

This is from *CQ Amateur Radio* article and would like to share it with you. Please refer enclosed attachment. *The “DXPP”*

*B*y the late 1980s and early 1990s, DXpeditions to the Southern Islands—Bouvet, Peter I, Heard Island, Amsterdam Island—were becoming very expensive. This was in part due to the new nature of DXing: QSOs on every band and every mode for everyone. Several such mega-operations seemed to set a new standard. Getting into the DXpedition log became relatively easy for everyone. The traditional smaller DXpedition teams, aimed at getting everyone one or two QSOs, seemed outdated.

Today’s mega-DXpeditions require many operators for many days, which in turn, vastly increases the cost. Funding such operations is problematical, as is finding operators with enough spare time and the necessary money. Finding operators who are capable of meeting modern standards is becoming even more difficult. As the number of DXpedition organizers has increased, performance standards have not always been kept on the DXpedition agenda.

Such has been the divergence from traditional DXpeditions that one group of DX ops set out on a two-fold path to lighten the DXpeditioning load and expense by planning simpler logistics—low power and smaller antennas—and making working the DXpedition *more difficult*. They planned to leave their amplifiers and large generators behind in order to scale down the logistics and lower the cost. At the same time, the thinking went that DXing to rare locations had become too easy. Their idea was to run low power and simple antennas in order to put more of the burden on the DXers, to return to the days when DXing was a challenge. This philosophy still has considerable merit, although some consider it elitist. The format hasn’t been widely copied.

If you can’t (or aren’t willing to) decrease costs, then you need to find ways to increase funding. One method is to invite additional travelers. Some of these individuals are non-hams and some are potential operators. The additional travelers are selected simply because they wish to visit the DXpedition’s destination. Potential operators may join the expedition even if they do not possess the skills necessary for managing the monstrous pileups that will occur. All of these additional individuals are required to make (at least) the increasingly large contributions required of team members. Non-ham members of the team fulfill their requirements by contributing the necessary funds. Potential operators need to do more.

Potential operators must commit time, money *and a willingness to learn—a good attitude*. Some organizers entertain the egalitarian notion that all amateur radio operators possess the operating knowledge required to effectively conduct a large pile-up. This simply isn’t true, but

individuals who are willing to learn can be trained to perform appropriately for the audience, if initially on bands and modes that do not require the greatest skills.

I am not discussing trips to common or semirare locations. I am talking about expeditions to extremely rare locations, locations that are very costly to access, places that require the utmost in operator skill to control potentially unruly pile-ups. Essentially, for a significant contribution, hams who otherwise might not be considered as “players” can be incorporated into the effort. Although there is necessarily a limit to the number of these team members, they can contribute to the effort while becoming an effective method of augmenting funding.

This method of funding and operating has generated some controversy. If one doesn’t first make the effort to understand the concept, seeing it as derogatory is understandable. Inviting well-off DXers with less than optimum operating experience might be seen as valuing these folks solely for their money, and to some extent, this is exactly what is happening. It can have considerable value to everyone, however, as long as all parties understand their roles. For the purpose of identifying the issue and generating a public dialog, famous DXpeditioner Martti Laine, OH2BH, has coined the term “DXPP,” the “DX Paying Passenger.”

To better understand the DXPP concept, think of a wealthy individual paying millions of dollars to “hitch” a ride into space. This actually has happened, of course. The individuals involved aren’t interested in becoming astronauts, they aren’t interested in science or research, and they won’t be piloting the ship. Their interest is just in the *adventure*. They probably aren’t upset if they are not asked to perform exotic astronaut duties. They simply are interested in the trip as tourists or passengers to see sights that few have seen. Other individuals have traveled with DXpeditions in order to add to their TCC (Travelers Century Club) total. They aren’t operators, they aren’t even hams, but they wished to go and could help cover the costs.

For the DXPP who *is* a ham, there is a unique opportunity to sit beside some of the world’s most knowledgeable DXpeditioners, to learn their best practices, and experience the thrill of successfully managing a major DXpedition pile-up. Most will probably expect to do some operating but not worry about the detailed success of the event. In most cases, DXers will welcome these individuals for their financial help and/or professional knowledge. The DXPP can be an important element in the success of a major DXpedition. Operating with an excruciatingly low rate, they won’t be very popular, but with a willingness to learn and some practice, a new world-class DXpedition operator may emerge.

The FCC, the ITU and the United Nations—Relationships

We hear a lot about the FCC, the ITU, and the IARU when it comes to authorization to operate radio transmitting equipment, but even as DXers, we aren’t always quite up to speed regarding which agencies deal with which functions when it comes to our licenses, bands and international

agreements. Who is who, and who does what?

The Federal Communications Commission (FCC) is responsible for governing all non-governmental communications in the United States. Radio broadcast, television broadcast, and our amateur radio transmissions all are governed by the FCC. Governmental communications are handled by the National Telecommunications and Information Agency, NTIA. In other countries, amateur radio communications are governed by similar agencies. Although the FCC works, often closely, with other regulatory agencies around the world, the FCC has no authority outside the USA and its dependencies.

The FCC generally grants transmitting authority consistent with international treaties. World telecommunications is coordinated through treaties negotiated at World Radio communication Conferences (WRCs) conducted by the International Telecommunications Union, the ITU, headquartered in Geneva, Switzerland. Since radio signals cross international borders, cooperation between nations is essential. The ITU facilitates this cooperation. The ITU is a United Nations organization that serves the world's nations by facilitating the negotiation of treaties between nations to harmonize communications for the betterment of all. These treaties are agreements between countries. The ITU functions by consensus. When a member of the ITU does not agree with certain provisions of a treaty, a footnote might be added exempting a country from that part of the agreement. The ITU has no enforcement authority; it has no "radio police."

To illustrate, let's consider the Z6 prefix used currently by Kosovo. Some people have stated that the use of Z6 is illegal. The use of that prefix is not illegal in the usual sense. Since Kosovo is not a member of the ITU, and has not signed any treaties, it has no obligation to adhere to any treaty principles. The prefix had been unused. The ITU has no direct authority to stop Kosovo from using the prefix. Was Kosovo in violation of some law by using the Z6 prefix? No. Further, since Kosovo is not a signatory to any ITU treaties, it is not obligated to respect them. There could be political consequences, of course.

Where do the ARRL, CQ, DARC, and other national amateur radio societies fit into this scenario? In some cases, certain members of national organizations participate in studies conducted by committees of the ITU. They sometimes make recommendations, but only the national governments vote in the treaty negotiations of the ITU. That the ITU hasn't issued country calling codes or radio prefix blocks for Kosovo lies within the politics of the United Nations.

In its DX contests and award programs, CQ magazine and the Deutscher Amateur Radio Club (DARC) (WAE) count Kosovo, Z6, as an entity, a multiplier. They have every right to do that. The ARRL, in its 1998 DXCC rules, decided to use certain external "bright line" criteria for determining the status of a political entity for its DXCC award. It chose membership in the UN, the granting of an ITU prefix, and/or membership in the IARU as its political entity criteria. It has every right to do this,

as well. None of these organizations has to deal with the ITU, UN, FCC, or IARU when considering their criteria. They have adopted their criteria, and they can just as easily change them. The DXCC criteria (last changed in 2004) originally worked well, but recently it has failed. The ARRL DX Advisory Committee (DXAC) soon will be asked to study the matter, a process that might take some time.
Beginner's Tips

Toward the end of this month and next, CO magazine will host two of the most famous, well-attended DX contests in the world, the CQ World Wide DX SSB Contest in October and the CQ World Wide DX CW Contest in November. In these contests, everyone can work everyone. Many newer DXers work for months or years to achieve their DXing goals: The IARU Worked All Continents award (WAG), CQ's Worked All Zones (WAZ) award, or the ARRL's DX Century Club (DXCC), and others.

Finding DX has become easier with the myriad of spotting networks on the Internet. However, one of the easiest ways to find and work lots of DX is to be active during one of the biggest DX contests. With skill, you can work more than 100 countries and usually 40 zones in just one weekend, especially on SSB.

DX is often easier to work in these contests because the callers are spread out over many different stations in different places on the bands. DXers can participate in the contests or just work to add to their country counts and practice breaking pile-ups. It's lots of fun, no matter what your goals.
Upcoming DXpeditions

Mozambique: From October 15 to 22, Don, N1DG, and Tom, N4XP, will colead an expedition to Mozambique signing C82DX. The low bands are the focus for this effort. For more information, see their website at <www.c82dx.com>.
Sable Island: October 1 to October 11 by Gary, VE1RGB; Rick, AI5P, and Murray, WA4DAN. See:
<http://www.cyOdxpedition.com<http://www.cyodxpedition.com/>
>.

Next month I'll talk more about the DX University, its origin, its goals, and its methods.
CQ DX Honor Roll

The CQ DX Honor Roll recognizes those DXers who have submitted proof of confirmation with 275 or more ACTIVE countries. With few exceptions, the ARRL DXCC Countries List is used as the country standard. The CQ DX Award currently recognizes 341 countries. Honor Roll listing is automatic when an application is received and approved for 275 or more active countries. Deleted countries do not count and all totals are adjusted as deletions occur. To remain on the CQ DX Honor Roll, annual updates are required. All updates must be accompanied by an SASE if confirmation of total is required. The fee for endorsement stickers is $1.00 each plus SASE. (Stickers for the 340 level are available.) Please make checks payable to the Award Manager, Keith Gilbertson. Mail all updates to Keith Gilbertson, K0KG, 21688 Sandy Beach Lane, Rochert, MN 56578-9604 USA.

3389. Indian fishermen want free ham radio and GPS gear

Yahoo group: m_a_r_s
Date: 2013-11-26 02:00:53 UTC
From: VU2LOC
Topic: 3389 Message: 3389

http://www.deccanchronicle.com/131013/news-current-affairs/article/no-contact-fishermen

India's *Deccan Chronicle* report that what are known as traditional fishermen want the right to use *amateur radio* with both *free *ham gear and GPS. This as a communications safety net when they venture out to sea.

The newspaper says that these fishermen have not found any truly affordable and reliable electronic method to send or receive communication while fishing in deep sea, especially when they face severe cyclonic storm. As such, they are forced to rely on what they term as unreliable mobile phones with no guarantee of signals reaching destination or back-up power to keep them operating.

A large number of these fishermen venture 200 miles or more from the shore for several days at a time. Their only way to communicate their location or safety to their family are the unreliable mobile telephones they have now.

Because of this, fishermen have been demanding the state government provide them with amateur radio gear and GPS equipment at a subsidy as they cannot afford to purchase this equipment on their own. They say that if they are equipped with amateur radio it will help to communicate to get weather updates, find their location at sea and receive directions as to which way they should proceed to avoid impending danger.

Currently some 70,000 fishermen from several villages along India's coast are awaiting the response from the government on their demand. The president of the District Fisherman Welfare Association is quoted in the article as saying that when communication network fails during the storm, fishermen find no source of information unless they are equipped with ham radio and GPS to help them reach shore safely.

The question of *licensing* was not touched on in the news article.

There are lots of commercial weather stations which givereal time weather
updates. Also the location can be found using GPS receivers. Why this
attack on AMATEUR BANDS?
Ask them to give access to the police, coast guards also.
Totally ridiculous demand.

This rag Deccan Chronicle should be banned for putting this type of
ridiculous ideas in gullible peoples heads.

From: VU2LOC
Topic: 3391 Message: 3391

V <vu2loc@...>U2LOC would like to share this *WorldRadio *article with you.
Where Have All the Users Gone?
COMMENTARY

By Bill Pasternak, WA6ITF

*H*ow many of you remember the 1950s-era folk song written by Pete Seeger titled “*Where Have All the Flowers Gone*?”

According to Wikipedia, only the first three verses were written by Seeger, with the rest added by Joe Hickerson in May 1960, who turned it into a so-called “circular or rhetorical song.” Who wrote which part is kind of incidental here, but if you were to replace the word “flowers” with “users” you would have a good window through which to view VHF and UHF FM open-format repeater operation in the 21st Century. (*WATCH and LISTEN: To a live performance of the Seeger/Hickerson folk classic “Where Have All the Flowers Gone” <http://bit.ly/1aO3r1p <http://bit.ly/1aO3r1p>>. – WA6ITF.)*

These days we have loads of repeaters and hundreds more waiting to get on the air. The problem is that many that have been there for years are sitting there empty of signals around the clock — devoid of any real humanity.

(*WATCH and LISTEN: To Michael McCoy, WD4AM, of Lenoir, North Carolina, try to make a contact on area repeaters — to no avail. “There you have it, folks,” he says. “220, 6 meters, 2 meters, 440 ... Where is everybody?” <http://bit.ly/1aOegkh <http://bit.ly/1aOegkh>>, Photo A. – WA6ITF.)*

The question of “where have all the users gone,” like the Seeger/Hickerson song, is rhetorical, and one for which I doubt there is any single answer.

There are some hams who blame the emergence of inexpensive cell phone service for the lack of people on repeaters these days. Others blame the restructuring of the United States Amateur Radio service and allowing easy access to the HF bands.

Still another group will tell you that it’s because so many systems have gone tone access (in the vernacular, *PL, CTCSS*, and so on) and that they see no reason to buy a new radio just to make some repeater owner happy.

Last, there are those who say there is nobody left from their old group of friends to talk to, and that they have nothing in common with newer hams.

In reality, there are likely as many reasons as are there are hams that apparently have abandoned VHF and UHF repeater operation. And likely, all are valid to the person or persons extolling them.

The bottom line, though, is that in many places finding a QSO on a repeater is akin to finding food in Old Mother Hubbard's cupboard.

Challenge 1: Cell phones

I disagree with the cell phone argument. Yes on a per-capita basis, cell phone service costs a lot less today than it did 20+ years ago, but it's still a phone. Even if you set up a conference call to talk to a bunch of friends at once, it's not like a ham radio contact.

It's not the one-on-one or one-with-20 roundtable experience that you get from amateur radio, be it on a repeater or an HF net. Yes, most of us have cell phones, but the only casualty of them has been the repeater auto-patch — not the repeater itself.

Challenge 2: Restructuring

As for restructuring, I could buy the argument only if there was some way to prove that all the hams who have left VHF, UHF, and repeaters have gone to the HF bands; that they have gone out and spent several thousand dollars to buy the necessary gear, and doing so in a time of economic recession, high unemployment, and heavy-handed restrictions on the large-size antennas that are required for operation on the high-frequency bands.

But there is no way to prove this except perhaps tracking the sales of purchases of HF transceivers, antennas, and accessories. I doubt there are many people keeping such statistics. And it would be impossible to accurately track individuals' sale of used gear.

When I talk with friends who are ardent HF operators, they tell me that in their estimation, the bands are no more or less crowded today than they were a decade or two ago. That's an anecdotal opinion rather than fact. But it is how many radio amateurs view it.

Challenge 3: Tone Access

As to tone access being the cause? Another rhetorical question: How many of you own a radio that has no built-in CTCSS encoder? I'm sure there are a few, but I kind of doubt that there are very many with a Regency HR-2B <http://bit.ly/19hLrdN>, ICOM IC-22, or Clegg FM-27B <http://bit.ly/1fcVGFa> still in daily use. (*WATCH and LISTEN: To a vintage Clegg FM-27B in action <http://bit.ly/16casee <http://bit.ly/16casee>>, Photo B. – WA6ITF.)*

Today even the $30 HTs manufactured in China come with full CTCSS and Digital CTCSS encode — and some with encode/decode. So the argument that tone access has driven hams off repeaters is specious at best.

Challenge 4: 'Nobody's Home'

So we are left with the final argument that so many people make: There is nobody left to talk to. That is, no one with which a longtime operator has anything in common. The new and newer operators flood the systems.

I admit there is often an “age gap” in today’s amateur radio, it appears to this operator to be a “gap” of a different type:

• Between those who “think old and want to retain the old time folkways of the hobby,” versus …

• Those who are more “forward thinking,” and interested in new ideas and the introduction of new modes and formats of operation.

A Generational ‘Thing’

I really do not think age is as much a factor as a *mindset*. At age 71, a conversation about the *future* exhilarates me far more than constant references to the hobby’s past. I see the future of ham radio in the digital domain, not analog. The only thing that saddens me is that I’ll likely not be around to see this “new ham radio” come fully to fruition.

Unlike what is happening in the worlds of commercial twoway communication, broadcasting and especially in broadband, changes in ham radio are “evolutionary” rather than “revolutionary.” In other words, ham radio overall will likely be the last to modernize. And if history is any teacher, there will be many who will fight the adoption of anything new, if for no other reason than to protect their monetary investment in the present.

While I was not around for the “spark-to-tube-generated Morse transition,” nor for the introduction of voice transmission (full carrier double sideband AM), I was there when the proponents of AM fought tooth and nail to prevent the introduction of SSB and I was actively involved in the introduction of FM on the VHF bands in the era when those running AM resented the introduction of the “Fun Mode” even though it was some 2 MHz up the 2-meter band. That was at the time unused territory where few were capable of venturing. (*NOTE: I was also one of the first on 6-meter SSB back in the middle 1960s. While I could work stations that those on AM could not hear, I suffered the “… you sound like Donald Duck” browbeating from those convinced that AM on 6 meters would last forever. – WA6ITF.)*

In my view, if you think young you can interact with almost anyone. If you think in the past you will remain there — alone and lonely by your own lack of words and actions.

So, Where Are They Going?

All of this said we are still left with: “Where have all the users gone?” Well, let me end by giving you my bit of speculation.

Could it be that there are far more repeaters than there are people who want to use them?

Before you say that there can never be too many repeaters, please give this some thought:

• How many groups and clubs own more than one repeater? The fact is that many clubs, groups and even individuals have a repeater on every band from

10 meters up into the Gigahertz range. And in some instances these same people have now added a second digital repeater on 2 meters, 70 cm, or 1.2 GHz.

• What does this buy them other than the ability to say “look what we’ve got” while at the same time only their 2 meter and possibly their 70-cm FM repeaters see any real use?

Central Questions

Maybe it is time to assess the real needs of the real world of amateur radio:

• Do we really need two, three, or more repeaters on the same channel pair, using separate CTCSS tone access, serving almost the same geographic area and thereby the same user base?

• Do radio clubs or individual system owners really need a repeater on every band when one will suffice their needs?

• Taking it a step further, do we really need to have hundreds or possibly thousands of repeaters sitting idle, burning up electrical power, whose only purpose is to “be there” if and when some form of an emergency strikes. Those repeaters that tell potential users they are not welcome to chat there because “someday there will be an emergency so the machine must remain clear of all other activity 24 hours a day, 7 days a week, year after year after year” *in reality* serve no purpose at all.

So, ‘Where Have All the Users Gone?’

I could go on, but you get the idea.

When you have far more of anything than the public needs, you are the loser. You are not going to be able to sell it or even give it away. In the case of repeaters, if there are too many, and few are being used, what’s the point of having so many?

Fewer might lead to more interesting discussions and bring more hams to a conversation. The hams are there. They have the radios. It’s only a matter of rekindling interest by getting conversations of interest going.

To this operator, the “Hi, Hi — OM” days of ham radio are long over. Repeaters are a great discussion platform. Maybe it’s time to recognize the potential they offer.

So, “where have all the users gone?” Unlike flowers, they are likely still there, but lack an incentive to return. They will not bloom again next spring on their own. – *de WA6ITF*

3393. Summits On The Air (SOTA) with VHF By Bob Witts,* K0NR

Yahoo group: m_a_r_s
Date: 2013-12-03 10:28:13 UTC
From: VU2LOC

VU2LOC would like to share this *CQ VHF* article with you.
Summits On The Air with VHF
By Bob Witts, K0NR*

*I*n the Spring 2013 issue of *CQ VHF*, I wrote about mountaintop VHF operating. Since then I've done some additional Summits On The Air (SOTA) activations, which I'll describe here. My intent is to provide some practical examples of how to get on the VHF SOTA.
Basic VHF Gear for SOTA

Most of the VHF SOTA activity in North America is on 2-meter FM, the *utility mode.* A VHF handheld transceiver really is a *trail friendly radio*, since you can just drop it in your backpack and go. Being a self-contained radio station, complete with power source and antenna, it is a handy way to get on the air. The cost is hard to beat as well, with low-cost radios starting at around $50.

The standard *rubber duck* is a very convenient antenna but represents a serious compromise in performance. I call this type of antenna *a very convenient crummy antenna*. A very effective upgrade is to use a half-wave vertical such as the MFJ-1714 or the Smiley Super Stick II. If you want a bigger signal, you can use a small Yagi antenna such as the Arrow 146-3. More on that later.

Another upgrade in efficiency is to use SSB or CW, using an all-mode rig such as the Yaesu FT-817. I've made a number of VHF SOTA contacts using CW/SSB and it makes a big difference in weak-signal performance.
Planning

The first step in activating a SOTA peak is doing some planning. For a well-known summit with an established trail, this can be really simple. For lesser known peaks, more extensive research may be required. My planning generally starts with the Sotawatch website, where I either check out a specific summit name (e.g., Pikes Peak) or review the map of SOTA peaks in a particular area of interest.

An example of a well-established trail to a SOTA summit is Devils Head Fire Lookout in Pike National Forest (WØ/FR-051). This summit has an excellent trail about 1.4 miles long to the base of the lookout tower (figure 1). The fire lookout is at 9748 feet elevation, which is about 1000 feet vertical gain above the trailhead (figure 2). This is a great SOTA hike, which I activated on 2-meter FM using a Yaesu FT-60 handheld radio and a 1/2-wave vertical antenna. The fire lookout at the top is an added attraction that makes the climb interesting.

Other peaks are not quite so well-known and may require a little bit of research. This is part of the fun of doing SOTA activations—identifying a

summit and figuring out the best way to get to the top. A good example is Castle Rock in the South Park region of Colorado (WØ/SP-112). I looked up the summit on SOTAwatch.org to get the basic information of latitude, longitude, and elevation and reviewed the SOTA Mapping Project map (figure 3). The SummitPost website provided some helpful information on the recommended route. This peak is very rugged at the top and I was not sure if it was a technical climb or not (figure 4). (It turns out that it is not technical, as long as you choose the route carefully.) I also consulted some topographical maps and a US Forest Service map to determine the best access roads and to verify the hiking route.

**21060 Capella Drive, Monument, CO 80132 e-mail: <bob@...
<bob@...>>*
Make Some Calls

The next thing I do is get the word out that I will be activating a SOTA peak. Making VHF contacts in the backcountry is not always a sure thing, since many of the summits are quite remote and there may not be many radio amateurs within VHF range. I usually send out an e-mail notice to hams who are likely to be within range to give then a heads up that I'll be out hiking. Even if they are not active SOTA chasers, they usually enjoy making a contact with someone on a summit. I also post an *alert* on the SOTA watch website indicating my operating plans.

When I reach the summit and if I have cell phone coverage, I put out a spot on SOTAwatch using the SOTA Goat iPhone app by Rock well WW1X. (Yes, it is acceptable and encouraged to "self spot" your SOTA activation.) After that, I make a call on the simplex calling frequency, 146.52 MHz. It is always fun to see who responds to my call, since during the summer there often are campers, hikers, fishermen, and mobile stations listening on that frequency. On the other hand, sometimes it can be dead quiet and I get no response. It helps to have a little patience and keep calling. If that doesn't work, I try some other popular simplex frequencies. The last resort is keying up one of the local repeaters to see if anyone is listening there. It is OK to solicit a contact on a repeater, but you still need to make a simplex contact for SOTA credit. Of course, it is a good idea to have a repeater directory with you, or a list of the repeaters in the area.

SOTA peaks do not have to be strenuous hikes. In fact, you can operate from summits that have roads to the top as long as you do a *qualifying hike*. The basic idea is that it is acceptable to drive to the summit, but then you need to load up your gear and carry it down the mountain a bit and then back up. For example, this summer we had some visitors who wanted to drive to the summit of Pikes Peak. I decided this was an excellent opportunity to do a quick SOTA activation, so I took along my backpack and SOTA radio gear. After we arrived at the summit, I did a short hike down Barr Trail to lose, then gain, 100 feet of elevation (the SOTA guideline for the WØ region). The main idea is keep SOTA activations from being a sitin-your-car-using-fossil-fuel mountaintop operation. Instead, your station has to be portable and carried some distance using non-motorized means.

Antennas

As mentioned earlier, the easiest 2-meter FM station is just an HT with a 1/2-wave vertical antenna (figure 5). This telescoping antenna is very convenient and sets up in an instant.

I recently picked up a 3-element Arrow Yagi antenna, the A146-3 (figure 6), for SOTA activations. I've always been a big fan of the dualband Arrow antenna, and this 2-meters-only antenna is a little smaller and more compact. I have the split-boom version which breaks down quite nicely and fits into a large daypack (figure 7). This antenna has a foam-covered handle that allows you to just grab and point the antenna. It also has threaded holes for attaching it to a standard camera tripod mount (1/4-20 thread). I usually mount it on top of a trekking pole that has a 1/4-20 mount, as shown in figure 8. This trekking pole is designed to be used as a camera monopod, but for SOTA use, it makes a handy mast for a Yagi antenna. It is not self-supporting and adds only a little bit of antenna height, but it provides a much easier way to handle the antenna.

Logging Contacts

If you are going to make SOTA contacts, you need to keep a log of them so you can enter them into the SOTA database later. The radio log can be quite simple, perhaps just a pencil and paper to jot down the basic logging information: callsign, time, frequency, and signal report. Alternatively, you can use a smartphone logging app such as HamLog for keeping track of your contacts (figure 9). HamLog includes a number of handy features such as grid location and is available on iOS and Android.

VHF Contests

VHF contests create some of the highest levels of activity on the VHF and up bands, so it is a great time to do some SOTA operating. For the ARRL September VHF Contest, I decided to do a simultaneous SOTA activation and VHF Contest effort. I hiked up Mount Herman (WØ/FR-063) on Sunday afternoon of the contest and handed out SOTA contacts while also working the contest. For the contest exchange, I gave out my grid locator (DM79), but I also let everyone know that I was on a SOTA peak.

For the ARRL contests, you'd probably want to enter in the Single Operator – *Portable* category, essentially the QRP category. For the CQ World-Wide VHF Contest in July, you also have the option of the *Hilltopper* category. This category is a perfect match with SOTA, since it uses QRP power levels but is limited to just six continuous hours of operating. You'll probably want to have an SSB transceiver along during a contest, since most of the activity will be on that mode. When working a VHF contest, you should not be spotting yourself using non-amateur means.

Tnx and 73

Thanks for taking the time to read another one of my columns on the *Utility Mode*. I always enjoy hearing from readers, so stop by my blog at < http://www.k0nr.com/blog> or drop me an e-mail.

3394. December YOTA month! - Youngsters On The Air

Yahoo group: m_a_r_s
Date: 2013-12-05 08:53:36 UTC
From: VU2LOC
Topic: 3394 Message: 3394

Please visit http://www.ham-yota.eu/ for more details.

December YOTA month!

October 6, 2013

After the success of the Youngsters On The Air events in the summer we decided that it’s time to do some more action !

During the whole month of December several country’s will become active with YOTA as suffix for callsign.

The idea for this is to break the ice for some youngsters and take the microphone in the hand. As seen over the years the YOTA-group is growing fast and every week more youngsters are asking to participate.

Let us all make YOTA populair in HAM radio and let us all help to put youngsters on the HAM radio train!

You want to hear us on the air? Listen for Youngsters On The Air callsigns in the whole month of December!

We would be happy if you try to work one or more of the following callsigns:

EA7URA/YOTA
EI0YOTA
ES5YOTA
ES9YOTA
LY5YOTA
OH2YOTA
OK2KJT
OK2KYK
OM9YOTA
OM13YOTA
ON4YOTA
PA6YOTA
S513YOTA
SN0YOTA
SH9YOTA
YO0YOTA
YL13YOTA
YL2013YOTA

Do you also want to use a callsign with YOTA in the suffix? Contact us for more information.

* will be updated

3395. [ZS9MADIBA] Mandela Special Event Station to be On the Air

Yahoo group: m_a_r_s
Date: 2013-12-12 05:53:00 UTC
From: VU2LOC
Topic: 3395 Message: 3395

> To commemorate the life of the late former president of South Africa Nelson Rolihlahla Mandela, the South African Radio League (SARL) is sponsoring special event station ZS9MADIBA for a period of 30 days. “Mandiba” is Mandela’s Xhosa tribal name. He served as South Africa’s first black president from 1994 until 1998. Mandela died December 5 at the age of 95.
>
> “The South African Radio League, its council and members join the world in mourning the loss of South Africa's greatest statesman, Nelson Rolihlahla Mandela,” the SARL said on its website. “Let us continue to remember and be encourged by the so many positive things for which he stood. While we mourn his passing, we celebrate his life and the lessons he taught us and the world.” — Thanks to The Daily DX; SARL
>
> Check the QRZ page for the "ZS9MADIBA" South African Radio League Special Event Station commemorating the life and recent passing of Nelson Rolihlahla Mandela, elder statesman and first democratically-elected president of the Republic of South Africa. Affectionately referred to as “Madiba”, he became one of the most recognized leaders in the world and was instrumental in the peaceful transition of South Africa from minority rule to a constitutional democracy. South Africans join the people of the world in mourning his passing and celebrating his legacy.
>
> ZS9MADIBA will be operational until the 11th of January 2014, at times and on frequencies to be determined.
>
> QSLs will be confirmed via the ARRL Logbook of the World (LoTW), and a special event paper QSL.

Celebrating New Year’s ‘On Bended Key’

By Cory GB Sickles, WA3UVV

<WA3UVV@... <WA3UVV@gmail.com>>

*D*ecember is seemingly jam-packed with holidays. As the month *whooshes* by, we suddenly find ourselves looking at the end of one year and the beginning of another. January is named for Janus, the Roman god of transitions, whose two faces look to the past and to the future. (*OBSERVATION:** He is probably the inspiration for many a teacher or mother who claimed to have eyes in the back of their head. But we digress … – WA3UVV.*)

An Annual Rite

New Year’s Eve and Day give us an opportunity to look back at the past year and gaze into the coming one. We tend to be introspective – if only for a short while – and think of things we could do to make the new year a better one. We might think of losing weight, exercising more, taking a long-anticipated vacation, ending a nicotine addiction, or starting a business. Some of us follow through on these resolutions, most of us don’t.

In the amateur radio community, New Year’s Eve and Day gives us a special way to commemorate the transition with an *homage* to Janus – Straight Key Night <http://bit.ly/osVXOl>.

SKN is cause for many to get out a certain piece, or pieces of vintage gear – some of it that softly glows – and a simple, straight key. It allows us a relaxed, back to basics way of enjoying ham radio while reliving some past moments and looking forward to our futures.

It’s an event, not a contest, so you can celebrate it as you wish – with as many or few contacts as you want and your particular selection of hardware.

In years past, I’ve celebrated SKN with special attention to the SK part of that abbreviation, as in Silent Key, *Photo A*.

With each passing year, there are the friends and family members we have on January
1, but not December 31. Over time, I’ve collected a few straight keys – some given as a final gift, some purchased from estate sales – of those whose friendship has meant something special to me. By no means is it a “complete” collection, but it is representative of so many more.

Sadly, this year I added another straight key to that collection, one of a friend who welcomed a transplanted ham into a radio club some 27 years ago. He was an even-tempered and amicable guy, with a bright smile and laugh. He died suddenly, just days into 2013. So, his key has been silent nearly a year.

On SKN 2014, I'll take it in hand and make it sing once again, along with a few others, just to keep their memories alive. (*WATCH andLISTEN:** To 2013 Straight Key Night in action from the Albert Lea, Minnesota station of Larry Shaunce, WDØAKX at <http://bit.ly/1deiBRn <http://bit.ly/1deiBRn>>,Photo B. – WA3UVV*.)

Even More CW Opportunities

While the ARRL's official SKN happens but once a year, another group of CW enthusiasts happily decided that wasn't enough and created a monthly SKN, on the first of the 11 others.

The Straight Key Century Club (SKCC) <http://www.skccgroup.com> is an active organization of those who love the simple elegance of communicating with our most basic and least expensive mode. They're also a group of Elmers, who consistently strive to assist those who want to learn the code and improve their speed.

Watering hole frequencies, like 7114 kHz are a welcoming area for slower (QRS) QSOs to take place. No pressure, no urgency, just fun at a pace you are comfortable with. There are additional SKCC hangouts on 40 meters, along with all the other bands, from 160 meters up. Of course, any time is a good time to get out your straight key or bug.

Learning the Dits and Dahs

If you don't know the code, then perhaps Janus' gaze into the future will encourage you to learn it. It really is easy — in fact easier than ever — to learn. Downloadable software from <http://www.g4fon.net> is a great way to pick up the characters at the speed you want via the Koch method.

Our friend Gordon West, WB6NOA, offers complete Morse courses, as well, to guide you along the way <http://bit.ly/186mVuc>.

Remember that every U.S. amateur from Novice (yes Virginia, there are some still around) on up has HF CW privileges on 80, 40, 15, and 10 meters. That's two nighttime and two daytime bands for you to explore. Canadian "Basic with Honours" licencees also have CW privileges.

Finding a Morse Instrument

Don't have a key? There are so many choices. (*RESOURCES:** See "The Keys to More Fun" accompanying this column. – WA3UVV*.)

I've listed some sources for some affordable options that can really stand out on your tabletop, *Photo C*. Of course you can always pick up a piece of history with a used J-38, J-44, or something else originally manufactured some 70 years ago. Also, nobody said you're only allowed to

have *just one*.

For an additional incentive – if you like DX – consider this: Some countries have hams who are only or most usually on CW.

Many amateurs still build some – if not all – of their gear and a CW transmitter is certainly simpler and less expensive to "slap together" than a full-blown SSB rig.

Practice Makes Perfect

Concerned about the prospects of working through a CW pileup? Patience and listening skills will reward you with being in the first few to work the DX station just when they start to call CQ – before all the spotters kick in and the "dog pile" ensues.

One final thing: CW and our digital non-voice modes are perfect for late-night or early-morning operation, if you don't want to disturb others in your home who are trying to sleep. Put on a set of headphones, grab your key and you're all set for a session of "silent running."

Adding CW to Your 2014 Resolutions

Please allow me to encourage you to add learning the code and improving your skills to your 2014 Resolutions. Once you get started and stack up a few contacts on 7114 kHz, you'll understand how much fun this aspect of amateur radio can be. Embrace our history and reach out toward the future with CW.

I wish all of you and your families a bright and Happy New Year! – WA3UVV.

Photo A. At WA3UVV, Cory GB Sickles has already picked out a couple of straight keys for the 2013-2014 Straight Key Night, sponsored by the ARRL. One of the instruments in his collection has particular significance, as it is from a ham who became a Silent Key this year. It's the key in the foreground. (*Courtesy of W0A3UVV*)

Photo B. Larry Shaunce, WDØAKX, puts his straight keys into action during 2013 ARRL Straight Key Night from his amateur station at Albert Lea, Minnesota. Watch and listen at <http://bit.ly/1deiBRn>. (*Internet screen grab*)

Photo C. The MFJ Enterprises MFJ-553 Deluxe Wood Base Straight Key can provide the new CW operator with an inexpensive entrée to Morse on the amateur radio bands. Visit <http://bit.ly/1fSKu2r>. (*Courtesy of MFJ Enteprises <http://www.MFJEnterprises.com <http://www.mfjenterprises.com/>>*)

The Keys to More Fun

There's nothing quite like a shiny new key, unless perhaps it's an old one that's a touchstone to a friend or Elmer. Here's a short list of places that make new keys available, to get you started with some CW fun.

By the way, they make great “stocking stuffers,” *hint, hint, hint ...*

• American Morse Equipment <http://www.americanmorse.com>

• Begali <http://www.i2rtf.com>

• Bencher <http://www.bencher.com/ham>

• MFJ Enterprises <http://www.mfjenterprises.com>

• Milestone Technologies <http://www.mtechnologies.com>

• Vibroplex <http://www.vibroplex.com>

• VIZKEY <http://www.vizkey.com>

Used straight keys can be found in lots of places including hamfests, online auctions, and estate sales.

A unique variety of keys and bugs is also available from Sandy (Ingram) Myrick, WB4OEE. She is making available a select group of Morse instruments from the extensive collection of the late, well-known author and CQ columnist Dave Ingram, K4TWJ (SK), *Photo D*. For a list of what’s available, contact Sandy at <wb4oee@...>. – *WA3UVV*

Photo D. Dave Ingram, K4TWJ (SK), wrote extensively about Morse instruments and amassed quite a collection — some of which is available to the buying public via Sandra Myrick, WB4OEE, at <WB4OEE@...>. (*Internet screen grab*)

3399. Ham Radio Santa is On the Air at OF9X

Yahoo group: m_a_r_s
Date: 2013-12-20 03:16:26 UTC
From: VU2LOC
Topic: 3399 Message: 3399

CERTIFIED BY OU-HOU (OH) FATHER CHRISTMAS – NOW ON THE AIR OLD FATHER NINE XMAS (OF9X)
; ;

OF9X – - OLD FATHER 9 XMAS

Do you remember the Ho-Ho Santa Claus who penetrated the bands and talked to children all over the world from Santa’s homeland - Finnish Lapland?

If you don’t – just refresh your memory at QRZ.com. Santa's helpers are now whispering that the white-bearded Old Man will be on the air this year again. The focus is on this coming weekend to remind you of the fun period of Christmas and to create the right spirit for families with children throughout the world. Just as last year, this will happen on the radio waves and hopefully on a variety of bands. Not many people knew then that Santa can even send Morse code!

Already tonight and over the next few days, Santa will appear around 14.225 kHz while loading up his sleigh for the weekend’s world tour. Just go for it and get involved – let your children or grandchildren feel the true coming of Christmas and the presence of Santa Claus.
The announcement is released below and we wish you a Merry Christmas and Good Luck for contacting Santa Claus!

The OF9X Santa Radio will be active in December from the Land of Santa Claus (QTH of Santa-Radio http://www.harriniva.fi) but adding to it and making it more visible, Radio Arcala will utilize their most advanced technology and remotely driven station, signing OF9X to test their technology, ride the Polar Path and employ a 100 meter (330 foot) rotating tower with a 6-over-6-over-6-over-6 20M array. If you contact OF9X during December, 2013, a slick Santa Claus CW-certificate and a fact sheet will be sent to you as per your email request to . The certificate can be issued also in the name of your children or grandchildren and used as a entry document with a discount program on your potential visit to our radio location at Harriniva, Muonio.

<http://files.qrz.com/x/of9x/puzzle.jpg>*HOW TO OBTAIN SANTA CLAUS CERTIFICATE*

You can write to Santa and obtain the Santa Claus Certificate if your station has contacted Santa Radio, OF9X both on CW & SSB---and 2012 QSOs count!
But remember that alternatively you can complete the Puzzle – and get some help with it from Santa himself!

Your certificate requests can be sent to of9x@...

From the Offices of Santa Claus Lapland - The North of Finland

December 19, 2013

SANTA RADIO OF9X AT CHRISTMAS 2013

Santa always appears on short notice every year, and so does OF9X from the Land of Santa Claus. There is one thing that we cannot skip and that is Christmas. It is because of all those wonderful children of the world who persuade us busy people to settle down and remember that Christmas is after all for children - for whose who truly believe. So, take a moment and join us - welcome your children or grandchildren on a trip to Christmas world with the dedication it deserves.

Last year Santa became a figure in Amateur Radio with thousands of followers, and more than 800 Santa Awards were issued throughout the world. Santa Radio (OF9X) established itself also through the pages of QST, DL-QTC and Japanese CQ Magazine. Santa is here to stay.

Starting yesterday, Santa has been loading up his sleigh and will soon begin his journey across the world. It all starts from Finnish Lapland and ends up on Christmas Day in the United States. The main activity will be over this coming weekend before Christmas and, as Santa is busy, his elves will be much of the time at the controls of Santa Radio, OF9X. Just stop by and say hello. Santa should be around 25KHz up the band edge (CW) and 14.225 KHz or thereabout.

But something new has happened since last year - Santa has become a pro on Morse code. In addition to SSB QSOs from a year ago or this year, you should now contact Santa also on CW to qualify for the 2013 Santa Cold Winter (CW) Award. You should track your two (2) QSOs on ClubLog at www.qrz.com/db/OF9X and send your request by email to of9x@.... One of the QSOs should be from this year - 2013.

If you don't manage to work Santa on CW or SSB, or you only make one QSO this winter? No problem - not everything is lost as you have the option of compensating for the missing QSO by solving the Christmas Puzzle. Just send the details of your one 2013 QSO together with the two mystery words from the Puzzle, and you will qualify.

In case you need any assistance in filling in the puzzle, you may ask Santa for help - talk to OF9X and just point out the question line number and Santa will whisper to you the needed word. But only two lines at the most. On CW please just send "QSC NR". (Q-Santa-Claus)

Hello All,

For your reference,

http://breadboardradio.com/

QRP kits featuring the Splinter QRPp transmitter / receiver

The “Splinter” QRPp Receiver / Transmitter

Direct Conversion Receiver

1.

1.tunes about 100KHz (user selectable in 40 meter band)
2.

2.bandpass filter with antenna attenuator
3.

3.SA612AN mixer/oscillator
4.

4.two stage audio amp with RC filtering
5.

5.drives stereo earphones (plenty of audio)
6.

6.receives cw and ssb

Crystal Controlled Transmitter

1.

1.2N3904 oscillator with SPOT button
2.

2.2N2219A final (450-500 milliwatts at 12vdc)
3.

3.clean output (harmonics down -45db)
4.

4.two position crystal switch (7030KHz soldered in with sipp socket for
extra crystals)
5.

5.sidetone oscillator
6.

6.built-in key and external key jack
7.

7.VXO (about 3KHz)

This kit is mounted on a wooden breadboard painted as you like before
mounting the double sided, solder masked and screen printed circuit board.
All parts, circuit board, knobs, decals, breadboard and complete
instructions are included for only $54.95.

Dear Friends
Just saw message in another forum that VU2JRT has Alinco repeater RS 4 with duplexers for sale.
If it interests to all or majority of mumbai hams why not to buy and fix it in appropriate part of mumbai.
I understand that somebody need to take lead and we all need to conbtribute.
Regards
Dinesh Patel

3407. Emergency Communication Support for Maharashtra.

Yahoo group: m_a_r_s
Date: 2014-03-08 14:15:58 UTC
From: Jaiprakash Pullakudy
Topic: 3407 Message: 3407

Dear Hams,

Today 08 May 14 afternoon
there was a call from Mantralaya new administrative building Commissioner's
Office - Mumbai Police (Wireless) to discuss upon Amateur Radio Support during
any emergency.

Accordingly, alongwith
myself, the following Hams attended the meeting at 1600hrs:

1. VU2LNZ Girish
2. VU2HIT Huzefa
3. VU2ZRS Zyros
4. VU3BMW Mayur

The Meeting was chaired by
DCP (Wireless) and introduced to their system of wireless networking in Maharashtra by HF,
VHF, UHF Satellite & truncking
method of communication. Though theirs
is 24x7 powerful system they also require parallel support from HAMs in case of
any emergency in the state.

They are quite well aware
of Hams capability in communication during any disaster from the time of Latur
Earthquake.

Now to come to the point of meeting:

Mumbai Police requires Ham Radio Support from all
districts of Maharashtra using HF network during any emergency in the state.

The support will be not on mobility during
emergency but to operate from their own QTH and pass the emergency related
communication to Mumbai Police/State Police Officials/Other govt.officials.

Therefore, all HAM's from Maharastra are requested
to volunteer their kind support by confirming to this email directly to my
personal ID vu2jpn@... by
furnishing the following details.

1. Handle
2. Call-Sign
3. Location/Area
4. District
5. LL number
6. Mobile no.
7. email ID

8. HF Capability at QTH

Trust
to have your support for any emergency call.

Kindly reply by 09.03.2014 12 noon
since this is an emergency request call.

In
the service of the nation,

3410. Emergency Communication request for Maharashtra.

Yahoo group: m_a_r_s
Date: 2014-03-10 11:02:45 UTC
From: Jaiprakash Pullakudy
Topic: 3410 Message: 3410

Dear Friends,

Thank you all for the kind replies/response directly. All noted and cared.

Few replied in the group which should not have been done. We have to maintain secrecy of our own data in group. Hence request all :

Though my email request is in the group, please reply to me directly at vu2jpn@... only
The data which I have received will not be shared anywhere - be assured of the same.
Please avoid counter emails to reduce QRM in the group.

Charu / CDP / HOT / Suresh etc are perfect on their part due to their experiences with regard to association with Government Officials. Every bocy has bad experiences with the system of government. As HOT's very good saying - spider. Actually they all are my well wisher and interactive friends since long and their guidance has to be cared for. They have actually made me and all others to be aware and be careful. I do appreciate them.

All have their own interpretation of Amatuer Radio as a Hobby - like some are interested in Expedition, Contest, Training, CW, just checking into the net only etc etc. We all need this hobby to be kept alive by all means on our own interest.

Myself being from Civil Defence as a volunteer since 1995, I am more into Disaster Management and as a Ham I have you great Hams as communication team to work in case of any emergency.

I always try my best NOT to become a prey of the spider webs all around. Hence the data which I had taken earlier for Civil Defence and now for Maharashtra police is never shared and will not share with these officials. As a ham : Secrecy maintained.

My experience with BMC Disaster Management is very bad as I was one of the team member from Civil Defence to set up DMP cell in BMC HQ. During Uttarakand flooding we 6/7 hams from Mumbai were ready to mobilize the next day of the incident, but did not mobilized as government official did not do anything on logistics and we did not want to spend 50/60K from our own pocket to go by flight etc. If they require hams service, then well take care of the logistic etc.

During the meeting on of 8th March, we did convey our issue of fishermen QRM. Trust, once we are into any system we should make our own requirements to work in our favour. The major problem is of installing antenna in our socities, which can be taken up too. This can only happen after a while with good work done from our part.

As of myself, I was on rental house at 4 different location few years back, but I did not have any problem in installing antenna in any of the societies only because of my proper authority.

Not to make this email big and boring, in short This email is send in the group only to stop the differences in the subject issue and continue counter emails and make QRM in the group.

Hence I request all not to reply to this email in the group. I will appreciate all to maintain the protocol of the group.

ANY REPLY TO THIS EMAIL MAY BE SENT TO PERSONAL EMAIL ONLY.

It's not an attachment -- it's stored online. To open this item, just click the link above.

vu2loc would like to share CQ article it with you!

A CQ Exclusive

Lauton Institute's Center for Research of Abnormal Personalities Offers Explanations for On-Air Misbehavior by Radio Amateurs
BY PROFESSOR EMIL HEISSELUFT* Lauton Institute, Grossmaul-an der Donau, Austria <heisseluft.emil@mashuga.orf.ar>

In the October 2013 issue of CQ, James Millner, WB2REM, a licensed psychologist of 25 years, addressed a subject near and dear to the hearts of all amateur radio operators and especially DXers: The Psychology of the QRMer.1 While Millner's article was not intended to provide a clinical analysis of the abnormal behaviors exhibited by some operators among us, his work did touch on the underlying factors and what operators could do to avoid unpleasant on-air experiences. In this article, Professor Heisseluft expands on Millner's work, revealing for the first time some of the remarkable clinical diagnoses associated with QRMers and DX operators. These are identified for us by the former director of the Lauton Institute's Center for Research of Abnormal Personalities. Readers will find the result both revealing and frightening.--W2VU

In his comprehensive review of the QRMer, James Millner, WB2REM, cited six reasons for the deterioration in behavior among hams that he believed were the root causes for many of the on-air problems heard today. These are:

1. Intolerance of divergent views

2. A general lack of operating experience

3. Feelings of station inferiority

4. Group diffused inappropriate behavior

5. Operating under the influence

6. Acts by truly emotionally sick individuals

The intentional interference resulting from the acting out of these behaviors, which often can be characterized as malicious, takes many forms. In general, however, they involve the deliberate introduction of QRM, including tuning up on the DX station's frequency, pirate operations, calling out of turn, and a plethora of other aggressive actions typical of various pathologies well known to the medical community. Given this, I thought it might be interesting to drop in for a few days on my retired colleague, Professor Hannah Blücher, the previous Director of the Lauton Institute's Center for Research of Abnormal Personalities, to put the question to her: What did she think was behind the deteriorating minds of many of today's radio amateurs? To help her understand the situation, I went armed with off-the-air recordings made during the latest CQ and ARRL worldwide DX phone contests. Of course, the entire matter could have been addressed in one day, but, oh, dear readers, Frau Blücher, who still makes her home near the Lauton Institute, makes the most delicious recipe for Apfelstrudel ... such a super flaky crust with mildly sweet apples, raisins, and crunchy walnuts for a filling ... but I digress.

Here is an edited version of our discussion, which went on for the better part of a week.

*Professor Heisseluft currently is vacationing at the Caribbean Weight Loss Clinic and Spa, Bridgetown, Barbados. Mail may be conveniently sent to the professor c/o CQ Magazine, 25 Newbridge Road, Hicksville, NY 11801.

Professor Heisseluft: So, my dear Hannah, you have heard the contest recordings. Have you any overall conclusions to share with me for my readers?

Frau Blücher: Dey are crazy! The lot of dem! Out of der minds! Yelling and all dat, you'd tink the house vas on fire. Vat ver dey yelling? Letters? Numbers? Crazy!

Professor Heisseluft: Those were their callsigns. Each person has a unique callsign, or station identifier, that is based on their country of origin and other factors. Each person's license conveys certain operating privileges. The other numbers were signal strength indicators and location identifiers.

Frau Blücher: Makes no sense ... grown men and women shouting like dat! And vat vas all dat interference ... vistling, oooohing and aaahing, swearing, belching, and da like. Vat? Dey can't turn off der microphones vile dey act like children?

Professor Heisseluft: Well, that's what I want to talk to you about. Perhaps, based on your work at the Center, you could tender some diagnoses related to the behaviors associated with some of the operators you heard causing malicious interference.

Frau Blücher: Absolutely ... it vud be my pleasure. Such miscreants ver da focus of my entire career. I am very familiar vis der strange personalities. Now, take dat man who vas swearing. Dat's an easy von: Tourette syndrome. Terrible ting ... inherited disorder of the nervous

system. Lots of motor and vocal tics. Not all da comments dey make are obscene, but many are socially inappropriate, insulting, and unacceptable.

Professor Heisseluft: But Tourette's isn't that prevalent in our society, as I recall. At most, it might affect 3% of the population.

Frau Blücher: So, now you're a medical doctor? You come here, Mister Smarty Pants, eat my strudel, and tell me my business? Next you'll be vanting to take over the directorship of the Center for Research of Abnormal Personalities from Professor Schrattenthaler. He is my boyfriend, you know!

Professor Heisseluft: I'm sorry, Frau Blücher, I certainly did not intend to inject my own meager knowledge of your field into this discussion. Why don't you continue while I refresh my plate?

Frau Blücher: Please ... Emil ... haf a little respect for me. So, maybe only a few of those crazy people actually have Tourette's. More likely, they suffer from attention deficit disorder, or ADD. Ve see a lot of dat ... ants-in-da-pants ... schpilkas, as my grossmutter used to say. Alvays up and down, never sitting still, tvitching, turning--

Professor Heisseluft: [returns with his second helping of strudel]--and you'd expect this to translate into the same kind of on-air behavior?

Frau Blücher: Certainly. Dey probably are spinning knobs, flipping svitches, jumping up and down, pounding on desks, kicking chairs, God knows vat ... nervous wrecks. I'm sure da coffee doesn't help, dats for sure.

Professor Heisseluft: Did you hear any other disturbed personalities on the recordings, Doctor?

Frau Blücher: [Look of mock disbelief on her face.] Vat, are you kidding me? Der ver a ton of dem. Did you not hear dat von station becoming obsessed with contacting anudder von? You heard it on da recording ... calling, calling, calling. Da man vas crazy. No contact. More calling, svearing, yelling, screaming. He vas focused on contacting dat von station and only dat station. Den, he started making noises on top of dat station--his imitation of a rooster crowing vasn't bad, you know--until no von could be heard. Obsessive-compulsive disorder. A classical psychosis if I ever saw von.

Professor Heisseluft: Did you pick up anything else of interest?

Frau Blücher: Vell--and here, I haf to tell you, I am quite proud of myself--I heard several operators ... is that what you call dem?--

Professor Heisseluft: Yes, radio operators--

Frau Blücher: Yes, vell, several of dem ver suffering from auditory hallucinations.

Professor Heisseluft: Auditory hallucinations?

Frau Blücher: Absolutely. I clearly heard da station who vas the center of attention call anudder station ven von or more of da calling stations falsely taut he had responded to dem. Maybe some of deez people hear voices anyway, who knows? And the delusions, oy!

Professor Heisseluft: Delusions?

Frau Blücher: Oh yes, some of da operators ver delusional in da extreme. Did you hear dat von guy who taut every station he called responded to him? I vud classify him as suffering from "pimary psychotic delusions"3 ... dat is, actions not comprehensible in terms of normal mental processes. Dat is von hellava group of people I heard on da recordings you played for me!

Professor Heisseluft: Yes, well, these contests are very stressful. They go for 48 hours straight and involve operators from around the world. It can be very competitive. I'm told, in some cases, operators have been found in total states of catatonia at the end of these contests. Wives have gone into their husbands' stations, moved their arms to the upright position, and their husbands' arms have stayed there. The men were totally nonfunctional.

Frau Blücher: I believe it. Based on vat I heard, maybe dey should require a sanity test before dey issue dem licenses to operate. Did anyvon ever tink of dat?

Professor Heisseluft: Actually, I described such an effort in the April 2005 issue of CQ magazine: "Psychological Testing of Amateur Radio Applicants ... The Cure for Spectrum Rage."4 At the time, rule changes proposed by the Federal Communications Commission in the United States would have required applicants for new amateur licenses, as well as current licensees seeking to renew their licenses, to undergo psychological exams. The test results would have been used for the purpose of determining a person's psychological profile and fitness for accessing the airwaves. The hue and cry that went up from the radio amateur community was unbelievable. [The telephone switchboards at CQ, the ARRL, and the FCC were tied up for three days because of calls from outraged radio amateurs.--ed.] The measures never were adopted for inclusion in the FCC's Rules and Regulations.

Frau Blücher: Vell, based on what I heard, they should have been. Dat is von crazy bunch of people on the air! And I mean dat in every sense of da vord!

Professor Heisseluft: I have to think more than a few people would agree with you, Frau Blücher.

Frau Blücher: [Nods in agreement.] Have some more strudel, Emil ... and don't forget to take some Zwet-schkenröster vid you. And Mohnstrudel ... don't forget the Mohnstrudel. You alvays look so undernourished ven I see you.

Summary

In an attempt to better understand the psychoses affecting radio amateurs these days, Professor Heisseluft asked the former director of the Lauton Institute's Center for Research on Abnormal Personalities, Professor Hannah

Blücher, to identify the problems she could identify in recordings made during both CQ and ARRL worldwide DX contests. Frau Blücher was quickly able to diagnose many of the operators she heard as suffering from one or more of the following: Tourette Syndrome, attention deficit disorder, obsessive-compulsive disorder, auditory hallucinations, and delusions. She was not at all surprised to learn that after these contests, some operators have been found in catatonic states. Her suggestion that radio amateurs be psychologically tested and profiled at the time they are licensed was previously discussed and withdrawn by licensing authorities in the United States after a major protest erupted among amateurs in that country.

Hello Friends
Lets vote for a positive change.
I just signed the petition "Bring Down the time to award an Amateur HAM license to 3 months from the current 1.5 years." on Change.org.It's importantin the interest of our great hobby. Will you sign it too? Here's the link:http://www.change.org/en-GB/petitions/bring-down-the-time-to-award-an-amateur-ham-license-to-3-months-from-the-current-1-5-years?recruiter=132894165&utm_campaign=signature_receipt&utm_medium=email&utm_source=share_petition
Thanks ! Dinesh Patel VU2DCI

I've shared an item with you:

RaDAR.pdf
https://drive.google.com/file/d/0B43bR8Br-omNNzd6SG4tUWtqWFk/view?usp=sharing&invite=CIe_pswM

It's not an attachment -- it's stored online. To open this item, just click the link above.

What is RaDAR?

RaDAR is a concept. RaDAR is not an organization nor does it compete with any organization. RaDAR is a way of setting up an amateur radio station quickly and having fun. RaDAR is a "mindset" or a "methodology" about being flexible to enable operations under difficult conditions without external resources. RaDAR neither has nor needs a command and control structure.

The evolution of RaDAR

RaDAR has somewhat changed a little expanding from an "On foot" operator to include other stations but emphasizing rapidly deployed, easily movable (objects), Amateur Radio stations.

What constitutes a "True RaDAR" Station?

To be considered as a true RaDAR station, the entire station equipment, radios, batteries, mast, antennas and refreshments must be easily portable and hence the need to carry the equipment for at least 1 km prior to setting up.

It is desirable that the RaDAR operator is able to

Operate an amateur radio station away from any building or vehicle although this is not a prerequisite. Carry equipment , radios, antennas, masts, food, water and shelter to the final destination, in a vehicle , on foot or wheelchair.
Determine accurate position and grid square to 6 digits.
Provide power without relying on any third party. Communicate in a professional, accurate and effective manner. Be self sufficient.

3425. All of 13, and already a master innovator!

She turned 13 years in April 2014. But if you try to judge her by her age you could be fooled. Because in January 2015 when nearly five lakhs of pilgrims congregate at Ganga Sagar she would be helping senior IPS and IAS officers with her radio communication skills to help manage this huge footfall - one of the largest religious congregations of pilgrims in the country.

Saborni Nag Biswas, a student of class 7 at St Augustine Day School in Barrackpore, is probably the youngest licensed HAM Radio operator now in the country. She took the exam when she was 12 and got the license a few months back from the union ministry of communication and information technology's wireless planning & coordination wing.

"I used to see my father (also a veteran HAM radio operator) rush to disaster spots to help victims and help them. He told me lots of stories about how he helped the victims to find their dearest ones. I was intrigued by it," said Saborni.

Training started years ago under the guidance of her father Ambarish Nag Biswas and the training module included sessions on basic electronics, Morse code, international traffic rules, international Q code among others.

"But I had to wait till I turned 12 years of age as that is the minimum age limit to take the exam. Now I have a license," she said.
Before Saborni it was 15-year-old Tom K Jose of Hyderabad who was the youngest licensed HAM operator in the country. Amateur radio operators have to qualify in an examination conducted by Union ministry of communications and obtain license for operating possessing a radio station. Without this license it is illegal to use such sets for communication.

Every year HAM radio operators or amateur radio operators are invited at Ganga Sagar Mela to establish a parallel communication network. They not only help in tracing missing persons through radio communication but also help in crowd management. Such parallel communication set up becomes more effective whenever there is a natural disaster or man made disaster.

"I had earlier been to the mela as a tourist a few years back. But this time I am highly excited as I would be able to accompany my father and other HAM operators and help in tracing the missing persons at the mela," she said.

To hone her skills she regularly spends a few hours over the radio speaking to other HAM operators across the country. Unlike her classmates she is not interested in playing or sitting in front of the television. Either in the morning before leaving for school or after returning home she sits before the communication set and chats with HAM operators.
"She has been awarded the license in the restricted category. She has

appeared for the exam to get a license in the general grade (advanced grade) with which she would be able to handle more sophisticated gadgets," said her father Ambarish Nag Biswas who had years of experience in helping the government agencies from disaster spots including the tsunami, bhuj earthquake, Aila and of late cyclone Hudhud.

This year Saborni had demonstrated her skills in the school exhibition too. Intrigued by her skills and knowledge a section of her class mates have now started training under Ambarish Nag Biswas every Sunday for an hour to become future HAM Radio operators.

Read the article 'All of 13, and already a master innovator!' on page 3 of the Hindustan Times (Delhi) epaper for December 16 via http://paper.hindustantimes.com/epaper/viewer.aspx?noredirect=true
